91207. Sulfur combines with oxygen to form sulfur dioxide.
91208. Butane burns in air to form carbon dioxide and water vapor and release heat.
91209. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
91210. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91211. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
91212. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
91213. Copper reacts with oxygen in air to form copper(II) oxide.
91214. Silicon reacts with oxygen to form silicon dioxide.
91215. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
91216. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
91217. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
91218. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
91219. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
91220. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
91221. Carbon combines with oxygen to form carbon dioxide.
91222. Carbon Monoxide burns in air to form carbon dioxide and release heat.
91223. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
91224. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91225. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
91226. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
91227. Lead reacts with oxygen in air to form lead(II) oxide.
91228. Carbon reacts with oxygen to form carbon dioxide.
91229. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
91230. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
91231. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
91232. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
91233. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
91234. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
91235. Phosphorus combines with oxygen to form phosphorus pentoxide.
91236. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
91237. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
91238. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91239. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
91240. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
91241. Magnesium reacts with oxygen in air to form magnesium oxide.
91242. Sulfur reacts with oxygen to form sulfur dioxide.
91243. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
91244. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
91245. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
91246. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
91247. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
91248. On heating, hydrogen peroxide decomposes to form water and oxygen.
91249. Magnesium combines with oxygen to form magnesium oxide.
91250. Hydrogen burns in air to form water vapor and release heat.
91251. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
91252. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91253. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
91254. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
91255. Calcium reacts with oxygen in air to form calcium oxide.
91256. Phosphorus reacts with oxygen to form phosphorus pentoxide.
91257. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
91258. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
91259. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
91260. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
91261. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
91262. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
91263. Iron combines with sulfur to form iron sulfide.
91264. Methane burns in air to form carbon dioxide and water vapor and release heat.
91265. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
91266. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91267. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
91268. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
91269. Aluminium reacts with oxygen in air to form aluminium oxide.
91270. Hydrogen reacts with oxygen to form water.
91271. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

91272. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

91273. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

91274. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

91275. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

91276. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

91277. Calcium Oxide combines with water to form calcium hydroxide.

91278. Ethane burns in air to form carbon dioxide and water vapor and release heat.

91279. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

91280. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91281. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

91282. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

91283. Zinc reacts with oxygen in air to form zinc oxide.

91284. Nitrogen reacts with oxygen to form nitrogen oxides.

91285. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

91286. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

91287. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

91288. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

91289. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

91290. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

91291. Hydrogen combines with oxygen to form water.

91292. Propane burns in air to form carbon dioxide and water vapor and release heat.

91293. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

91294. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91295. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

91296. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

91297. Iron reacts with oxygen in air to form iron(III) oxide.

91298. Silicon reacts with oxygen to form silicon dioxide.

91299. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

91300. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

91301. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

91302. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

91303. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

91304. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

91305. Nitrogen combines with hydrogen to form ammonia.

91306. Butane burns in air to form carbon dioxide and water vapor and release heat.

91307. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

91308. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91309. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

91310. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

91311. Copper reacts with oxygen in air to form copper(II) oxide.

91312. Carbon reacts with oxygen to form carbon dioxide.

91313. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

91314. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

91315. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

91316. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

91317. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

91318. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

91319. Sulfur combines with oxygen to form sulfur dioxide.

91320. Carbon Monoxide burns in air to form carbon dioxide and release heat.

91321. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

91322. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91323. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

91324. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

91325. Lead reacts with oxygen in air to form lead(II) oxide.

91326. Sulfur reacts with oxygen to form sulfur dioxide.

91327. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

91328. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

91329. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

91330. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

91331. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

91332. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

91333. Carbon combines with oxygen to form carbon dioxide.

91334. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

91335. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

91336. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91337. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

91338. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

91339. Magnesium reacts with oxygen in air to form magnesium oxide.

91340. Phosphorus reacts with oxygen to form phosphorus pentoxide.

91341. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

91342. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

91343. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

91344. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

91345. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

91346. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

91347. Phosphorus combines with oxygen to form phosphorus pentoxide.

91348. Hydrogen burns in air to form water vapor and release heat.

91349. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

91350. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91351. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

91352. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

91353. Calcium reacts with oxygen in air to form calcium oxide.

91354. Hydrogen reacts with oxygen to form water.

91355. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

91356. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

91357. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

91358. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

91359. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

91360. On heating, hydrogen peroxide decomposes to form water and oxygen.

91361. Magnesium combines with oxygen to form magnesium oxide.

91362. Methane burns in air to form carbon dioxide and water vapor and release heat.

91363. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

91364. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91365. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
91366. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
91367. Aluminium reacts with oxygen in air to form aluminium oxide.
91368. Nitrogen reacts with oxygen to form nitrogen oxides.
91369. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
91370. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
91371. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
91372. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
91373. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
91374. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
91375. Iron combines with sulfur to form iron sulfide.
91376. Ethane burns in air to form carbon dioxide and water vapor and release heat.
91377. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
91378. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91379. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
91380. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
91381. Zinc reacts with oxygen in air to form zinc oxide.
91382. Silicon reacts with oxygen to form silicon dioxide.
91383. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
91384. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
91385. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
91386. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
91387. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
91388. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
91389. Calcium Oxide combines with water to form calcium hydroxide.
91390. Propane burns in air to form carbon dioxide and water vapor and release heat.
91391. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
91392. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91393. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
91394. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
91395. Iron reacts with oxygen in air to form iron(III) oxide.
91396. Carbon reacts with oxygen to form carbon dioxide.
91397. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
91398. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
91399. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
91400. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
91401. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
91402. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
91403. Hydrogen combines with oxygen to form water.
91404. Butane burns in air to form carbon dioxide and water vapor and release heat.
91405. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
91406. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91407. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
91408. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
91409. Copper reacts with oxygen in air to form copper(II) oxide.
91410. Sulfur reacts with oxygen to form sulfur dioxide.
91411. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
91412. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
91413. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
91414. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
91415. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
91416. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
91417. Nitrogen combines with hydrogen to form ammonia.
91418. Carbon Monoxide burns in air to form carbon dioxide and release heat.
91419. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
91420. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91421. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
91422. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
91423. Lead reacts with oxygen in air to form lead(II) oxide.
91424. Phosphorus reacts with oxygen to form phosphorus pentoxide.
91425. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
91426. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
91427. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
91428. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
91429. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
91430. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
91431. Sulfur combines with oxygen to form sulfur dioxide.
91432. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
91433. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
91434. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91435. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
91436. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
91437. Magnesium reacts with oxygen in air to form magnesium oxide.
91438. Hydrogen reacts with oxygen to form water.
91439. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
91440. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
91441. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
91442. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
91443. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
91444. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
91445. Carbon combines with oxygen to form carbon dioxide.
91446. Hydrogen burns in air to form water vapor and release heat.
91447. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
91448. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91449. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
91450. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
91451. Calcium reacts with oxygen in air to form calcium oxide.
91452. Nitrogen reacts with oxygen to form nitrogen oxides.
91453. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
91454. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
91455. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

91456. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

91457. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

91458. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

91459. Phosphorus combines with oxygen to form phosphorus pentoxide.

91460. Methane burns in air to form carbon dioxide and water vapor and release heat.

91461. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

91462. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91463. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.

91464. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

91465. Aluminium reacts with oxygen in air to form aluminium oxide.

91466. Silicon reacts with oxygen to form silicon dioxide.

91467. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

91468. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

91469. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

91470. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

91471. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

91472. On heating, hydrogen peroxide decomposes to form water and oxygen.

91473. Magnesium combines with oxygen to form magnesium oxide.

91474. Ethane burns in air to form carbon dioxide and water vapor and release heat.

91475. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

91476. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91477. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.

91478. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

91479. Zinc reacts with oxygen in air to form zinc oxide.

91480. Carbon reacts with oxygen to form carbon dioxide.

91481. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

91482. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

91483. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

91484. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

91485. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

91486. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

91487. Iron combines with sulfur to form iron sulfide.

91488. Propane burns in air to form carbon dioxide and water vapor and release heat.

91489. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

91490. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91491. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.

91492. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

91493. Iron reacts with oxygen in air to form iron(III) oxide.

91494. Sulfur reacts with oxygen to form sulfur dioxide.

91495. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

91496. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

91497. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

91498. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

91499. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

91500. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

91501. Calcium Oxide combines with water to form calcium hydroxide.

91502. Butane burns in air to form carbon dioxide and water vapor and release heat.

91503. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

91504. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91505. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

91506. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

91507. Copper reacts with oxygen in air to form copper(II) oxide.

91508. Phosphorus reacts with oxygen to form phosphorus pentoxide.

91509. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

91510. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

91511. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

91512. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

91513. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

91514. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

91515. Hydrogen combines with oxygen to form water.

91516. Carbon Monoxide burns in air to form carbon dioxide and release heat.

91517. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

91518. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91519. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

91520. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

91521. Lead reacts with oxygen in air to form lead(II) oxide.

91522. Hydrogen reacts with oxygen to form water.

91523. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

91524. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

91525. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

91526. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

91527. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

91528. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

91529. Nitrogen combines with hydrogen to form ammonia.

91530. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

91531. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

91532. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91533. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

91534. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

91535. Magnesium reacts with oxygen in air to form magnesium oxide.

91536. Nitrogen reacts with oxygen to form nitrogen oxides.

91537. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

91538. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

91539. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

91540. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

91541. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

91542. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

91543. Sulfur combines with oxygen to form sulfur dioxide.

91544. Hydrogen burns in air to form water vapor and release heat.

91545. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

91546. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91547. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.

91548. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
91549. Calcium reacts with oxygen in air to form calcium oxide.
91550. Silicon reacts with oxygen to form silicon dioxide.
91551. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
91552. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
91553. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
91554. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
91555. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
91556. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
91557. Carbon combines with oxygen to form carbon dioxide.
91558. Methane burns in air to form carbon dioxide and water vapor and release heat.
91559. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
91560. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91561. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
91562. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
91563. Aluminium reacts with oxygen in air to form aluminium oxide.
91564. Carbon reacts with oxygen to form carbon dioxide.
91565. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
91566. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
91567. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
91568. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
91569. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
91570. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
91571. Phosphorus combines with oxygen to form phosphorus pentoxide.
91572. Ethane burns in air to form carbon dioxide and water vapor and release heat.
91573. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
91574. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91575. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
91576. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
91577. Zinc reacts with oxygen in air to form zinc oxide.
91578. Sulfur reacts with oxygen to form sulfur dioxide.
91579. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
91580. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
91581. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
91582. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
91583. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
91584. On heating, hydrogen peroxide decomposes to form water and oxygen.
91585. Magnesium combines with oxygen to form magnesium oxide.
91586. Propane burns in air to form carbon dioxide and water vapor and release heat.
91587. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
91588. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91589. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
91590. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
91591. Iron reacts with oxygen in air to form iron(III) oxide.
91592. Phosphorus reacts with oxygen to form phosphorus pentoxide.
91593. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
91594. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
91595. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
91596. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
91597. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
91598. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
91599. Iron combines with sulfur to form iron sulfide.
91600. Butane burns in air to form carbon dioxide and water vapor and release heat.
91601. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
91602. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91603. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
91604. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
91605. Copper reacts with oxygen in air to form copper(II) oxide.
91606. Hydrogen reacts with oxygen to form water.
91607. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
91608. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
91609. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
91610. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
91611. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
91612. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
91613. Calcium Oxide combines with water to form calcium hydroxide.
91614. Carbon Monoxide burns in air to form carbon dioxide and release heat.
91615. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
91616. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91617. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
91618. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
91619. Lead reacts with oxygen in air to form lead(II) oxide.
91620. Nitrogen reacts with oxygen to form nitrogen oxides.
91621. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
91622. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
91623. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
91624. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
91625. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
91626. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
91627. Hydrogen combines with oxygen to form water.
91628. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
91629. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
91630. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91631. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
91632. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
91633. Magnesium reacts with oxygen in air to form magnesium oxide.
91634. Silicon reacts with oxygen to form silicon dioxide.
91635. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
91636. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
91637. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
91638. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
91639. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

91640. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

91641. Nitrogen combines with hydrogen to form ammonia.

91642. Hydrogen burns in air to form water vapor and release heat.

91643. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

91644. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91645. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

91646. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

91647. Calcium reacts with oxygen in air to form calcium oxide.

91648. Carbon reacts with oxygen to form carbon dioxide.

91649. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

91650. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

91651. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

91652. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

91653. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

91654. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

91655. Sulfur combines with oxygen to form sulfur dioxide.

91656. Methane burns in air to form carbon dioxide and water vapor and release heat.

91657. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

91658. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91659. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

91660. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

91661. Aluminium reacts with oxygen in air to form aluminium oxide.

91662. Sulfur reacts with oxygen to form sulfur dioxide.

91663. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

91664. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

91665. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

91666. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

91667. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

91668. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

91669. Carbon combines with oxygen to form carbon dioxide.

91670. Ethane burns in air to form carbon dioxide and water vapor and release heat.

91671. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

91672. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91673. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

91674. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

91675. Zinc reacts with oxygen in air to form zinc oxide.

91676. Phosphorus reacts with oxygen to form phosphorus pentoxide.

91677. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

91678. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

91679. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

91680. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

91681. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

91682. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

91683. Phosphorus combines with oxygen to form phosphorus pentoxide.

91684. Propane burns in air to form carbon dioxide and water vapor and release heat.

91685. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

91686. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91687. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

91688. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

91689. Iron reacts with oxygen in air to form iron(III) oxide.

91690. Hydrogen reacts with oxygen to form water.

91691. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

91692. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

91693. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

91694. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

91695. Iron(II) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

91696. On heating, hydrogen peroxide decomposes to form water and oxygen.

91697. Magnesium combines with oxygen to form magnesium oxide.

91698. Butane burns in air to form carbon dioxide and water vapor and release heat.

91699. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

91700. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91701. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

91702. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

91703. Copper reacts with oxygen in air to form copper(II) oxide.

91704. Nitrogen reacts with oxygen to form nitrogen oxides.

91705. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

91706. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

91707. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

91708. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

91709. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

91710. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

91711. Iron combines with sulfur to form iron sulfide.

91712. Carbon Monoxide burns in air to form carbon dioxide and release heat.

91713. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

91714. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91715. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

91716. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

91717. Lead reacts with oxygen in air to form lead(II) oxide.

91718. Silicon reacts with oxygen to form silicon dioxide.

91719. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

91720. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

91721. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

91722. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

91723. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

91724. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

91725. Calcium Oxide combines with water to form calcium hydroxide.

91726. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

91727. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

91728. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91729. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.

91730. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

91731. Magnesium reacts with oxygen in air to form magnesium oxide.

91732. Carbon reacts with oxygen to form carbon dioxide.

91733. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

91734. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

91735. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
91736. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
91737. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
91738. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
91739. Hydrogen combines with oxygen to form water.
91740. Hydrogen burns in air to form water vapor and release heat.
91741. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
91742. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91743. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
91744. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
91745. Calcium reacts with oxygen in air to form calcium oxide.
91746. Sulfur reacts with oxygen to form sulfur dioxide.
91747. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
91748. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
91749. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
91750. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
91751. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
91752. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
91753. Nitrogen combines with hydrogen to form ammonia.
91754. Methane burns in air to form carbon dioxide and water vapor and release heat.
91755. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
91756. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91757. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
91758. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
91759. Aluminium reacts with oxygen in air to form aluminium oxide.
91760. Phosphorus reacts with oxygen to form phosphorus pentoxide.
91761. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
91762. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
91763. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
91764. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
91765. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
91766. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
91767. Sulfur combines with oxygen to form sulfur dioxide.
91768. Ethane burns in air to form carbon dioxide and water vapor and release heat.
91769. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
91770. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91771. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
91772. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
91773. Zinc reacts with oxygen in air to form zinc oxide.
91774. Hydrogen reacts with oxygen to form water.
91775. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
91776. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
91777. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
91778. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
91779. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
91780. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
91781. Carbon combines with oxygen to form carbon dioxide.
91782. Propane burns in air to form carbon dioxide and water vapor and release heat.
91783. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
91784. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91785. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
91786. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
91787. Iron reacts with oxygen in air to form iron(III) oxide.
91788. Nitrogen reacts with oxygen to form nitrogen oxides.
91789. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
91790. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
91791. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
91792. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
91793. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
91794. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
91795. Phosphorus combines with oxygen to form phosphorus pentoxide.
91796. Butane burns in air to form carbon dioxide and water vapor and release heat.
91797. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
91798. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91799. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
91800. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
91801. Copper reacts with oxygen in air to form copper(II) oxide.
91802. Silicon reacts with oxygen to form silicon dioxide.
91803. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
91804. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
91805. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
91806. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
91807. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
91808. On heating, hydrogen peroxide decomposes to form water and oxygen.
91809. Magnesium combines with oxygen to form magnesium oxide.
91810. Carbon Monoxide burns in air to form carbon dioxide and release heat.
91811. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
91812. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91813. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
91814. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
91815. Lead reacts with oxygen in air to form lead(II) oxide.
91816. Carbon reacts with oxygen to form carbon dioxide.
91817. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
91818. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
91819. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
91820. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
91821. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
91822. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
91823. Iron combines with sulfur to form iron sulfide.
91824. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
91825. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

91826. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91827. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
91828. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
91829. Magnesium reacts with oxygen in air to form magnesium oxide.
91830. Sulfur reacts with oxygen to form sulfur dioxide.
91831. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
91832. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
91833. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
91834. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
91835. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
91836. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
91837. Calcium Oxide combines with water to form calcium hydroxide.
91838. Hydrogen burns in air to form water vapor and release heat.
91839. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
91840. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91841. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
91842. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
91843. Calcium reacts with oxygen in air to form calcium oxide.
91844. Phosphorus reacts with oxygen to form phosphorus pentoxide.
91845. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
91846. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
91847. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
91848. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
91849. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
91850. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
91851. Hydrogen combines with oxygen to form water.
91852. Methane burns in air to form carbon dioxide and water vapor and release heat.
91853. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
91854. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91855. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
91856. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
91857. Aluminium reacts with oxygen in air to form aluminium oxide.
91858. Hydrogen reacts with oxygen to form water.
91859. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
91860. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
91861. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
91862. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
91863. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
91864. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
91865. Nitrogen combines with hydrogen to form ammonia.
91866. Ethane burns in air to form carbon dioxide and water vapor and release heat.
91867. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
91868. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91869. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
91870. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
91871. Zinc reacts with oxygen in air to form zinc oxide.
91872. Nitrogen reacts with oxygen to form nitrogen oxides.
91873. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
91874. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
91875. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
91876. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
91877. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
91878. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
91879. Sulfur combines with oxygen to form sulfur dioxide.
91880. Propane burns in air to form carbon dioxide and water vapor and release heat.
91881. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
91882. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91883. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
91884. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
91885. Iron reacts with oxygen in air to form iron(III) oxide.
91886. Silicon reacts with oxygen to form silicon dioxide.
91887. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
91888. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
91889. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
91890. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
91891. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
91892. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
91893. Carbon combines with oxygen to form carbon dioxide.
91894. Butane burns in air to form carbon dioxide and water vapor and release heat.
91895. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
91896. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91897. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
91898. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
91899. Copper reacts with oxygen in air to form copper(II) oxide.
91900. Carbon reacts with oxygen to form carbon dioxide.
91901. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
91902. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
91903. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
91904. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
91905. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
91906. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
91907. Phosphorus combines with oxygen to form phosphorus pentoxide.
91908. Carbon Monoxide burns in air to form carbon dioxide and release heat.
91909. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
91910. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
91911. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
91912. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
91913. Lead reacts with oxygen in air to form lead(II) oxide.
91914. Sulfur reacts with oxygen to form sulfur dioxide.
91915. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
91916. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
91917. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
91918. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

91919. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

91920. On heating, hydrogen peroxide decomposes to form water and oxygen.

91921. Magnesium combines with oxygen to form magnesium oxide.

91922. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

91923. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

91924. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91925. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

91926. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

91927. Magnesium reacts with oxygen in air to form magnesium oxide.

91928. Phosphorus reacts with oxygen to form phosphorus pentoxide.

91929. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

91930. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

91931. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

91932. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

91933. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

91934. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

91935. Iron combines with sulfur to form iron sulfide.

91936. Hydrogen burns in air to form water vapor and release heat.

91937. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

91938. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91939. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

91940. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

91941. Calcium reacts with oxygen in air to form calcium oxide.

91942. Hydrogen reacts with oxygen to form water.

91943. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

91944. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

91945. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

91946. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

91947. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

91948. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

91949. Calcium Oxide combines with water to form calcium hydroxide.

91950. Methane burns in air to form carbon dioxide and water vapor and release heat.

91951. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

91952. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91953. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

91954. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

91955. Aluminium reacts with oxygen in air to form aluminium oxide.

91956. Nitrogen reacts with oxygen to form nitrogen oxides.

91957. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

91958. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

91959. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

91960. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

91961. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

91962. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

91963. Hydrogen combines with oxygen to form water.

91964. Ethane burns in air to form carbon dioxide and water vapor and release heat.

91965. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

91966. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91967. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

91968. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

91969. Zinc reacts with oxygen in air to form zinc oxide.

91970. Silicon reacts with oxygen to form silicon dioxide.

91971. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

91972. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

91973. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

91974. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

91975. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

91976. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

91977. Nitrogen combines with hydrogen to form ammonia.

91978. Propane burns in air to form carbon dioxide and water vapor and release heat.

91979. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

91980. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91981. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

91982. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

91983. Iron reacts with oxygen in air to form iron(III) oxide.

91984. Carbon reacts with oxygen to form carbon dioxide.

91985. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

91986. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

91987. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

91988. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

91989. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

91990. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

91991. Sulfur combines with oxygen to form sulfur dioxide.

91992. Butane burns in air to form carbon dioxide and water vapor and release heat.

91993. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

91994. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

91995. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

91996. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

91997. Copper reacts with oxygen in air to form copper(II) oxide.

91998. Sulfur reacts with oxygen to form sulfur dioxide.

91999. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

92000. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

92001. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

92002. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

92003. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

92004. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

92005. Carbon combines with oxygen to form carbon dioxide.

92006. Carbon Monoxide burns in air to form carbon dioxide and release heat.

92007. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

92008. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92009. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

92010. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
92011. Lead reacts with oxygen in air to form lead(II) oxide.
92012. Phosphorus reacts with oxygen to form phosphorus pentoxide.
92013. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
92014. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
92015. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
92016. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
92017. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
92018. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
92019. Phosphorus combines with oxygen to form phosphorus pentoxide.
92020. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
92021. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
92022. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92023. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
92024. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
92025. Magnesium reacts with oxygen in air to form magnesium oxide.
92026. Hydrogen reacts with oxygen to form water.
92027. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
92028. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
92029. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
92030. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
92031. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
92032. On heating, hydrogen peroxide decomposes to form water and oxygen.
92033. Magnesium combines with oxygen to form magnesium oxide.
92034. Hydrogen burns in air to form water vapor and release heat.
92035. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
92036. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92037. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
92038. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
92039. Calcium reacts with oxygen in air to form calcium oxide.
92040. Nitrogen reacts with oxygen to form nitrogen oxides.
92041. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
92042. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
92043. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
92044. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
92045. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
92046. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
92047. Iron combines with sulfur to form iron sulfide.
92048. Methane burns in air to form carbon dioxide and water vapor and release heat.
92049. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
92050. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92051. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
92052. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
92053. Aluminium reacts with oxygen in air to form aluminium oxide.
92054. Silicon reacts with oxygen to form silicon dioxide.
92055. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
92056. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
92057. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
92058. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
92059. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
92060. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
92061. Calcium Oxide combines with water to form calcium hydroxide.
92062. Ethane burns in air to form carbon dioxide and water vapor and release heat.
92063. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
92064. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92065. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
92066. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
92067. Zinc reacts with oxygen in air to form zinc oxide.
92068. Carbon reacts with oxygen to form carbon dioxide.
92069. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
92070. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
92071. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
92072. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
92073. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
92074. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
92075. Hydrogen combines with oxygen to form water.
92076. Propane burns in air to form carbon dioxide and water vapor and release heat.
92077. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
92078. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92079. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
92080. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
92081. Iron reacts with oxygen in air to form iron(III) oxide.
92082. Sulfur reacts with oxygen to form sulfur dioxide.
92083. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
92084. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
92085. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
92086. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
92087. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
92088. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
92089. Nitrogen combines with hydrogen to form ammonia.
92090. Butane burns in air to form carbon dioxide and water vapor and release heat.
92091. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
92092. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92093. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
92094. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
92095. Copper reacts with oxygen in air to form copper(II) oxide.
92096. Phosphorus reacts with oxygen to form phosphorus pentoxide.
92097. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
92098. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
92099. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
92100. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
92101. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
92102. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
92103. Sulfur combines with oxygen to form sulfur dioxide.

92104. Carbon Monoxide burns in air to form carbon dioxide and release heat.
92105. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
92106. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92107. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
92108. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
92109. Lead reacts with oxygen in air to form lead(II) oxide.
92110. Hydrogen reacts with oxygen to form water.
92111. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
92112. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
92113. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
92114. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
92115. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
92116. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
92117. Carbon combines with oxygen to form carbon dioxide.
92118. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
92119. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
92120. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92121. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
92122. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
92123. Magnesium reacts with oxygen in air to form magnesium oxide.
92124. Nitrogen reacts with oxygen to form nitrogen oxides.
92125. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
92126. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
92127. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
92128. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
92129. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
92130. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
92131. Phosphorus combines with oxygen to form phosphorus pentoxide.
92132. Hydrogen burns in air to form water vapor and release heat.
92133. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
92134. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92135. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
92136. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
92137. Calcium reacts with oxygen in air to form calcium oxide.
92138. Silicon reacts with oxygen to form silicon dioxide.
92139. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
92140. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
92141. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
92142. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
92143. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
92144. On heating, hydrogen peroxide decomposes to form water and oxygen.
92145. Magnesium combines with oxygen to form magnesium oxide.
92146. Methane burns in air to form carbon dioxide and water vapor and release heat.
92147. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
92148. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92149. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
92150. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
92151. Aluminium reacts with oxygen in air to form aluminium oxide.
92152. Carbon reacts with oxygen to form carbon dioxide.
92153. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
92154. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
92155. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
92156. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
92157. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
92158. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
92159. Iron combines with sulfur to form iron sulfide.
92160. Ethane burns in air to form carbon dioxide and water vapor and release heat.
92161. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
92162. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92163. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
92164. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
92165. Zinc reacts with oxygen in air to form zinc oxide.
92166. Sulfur reacts with oxygen to form sulfur dioxide.
92167. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
92168. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
92169. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
92170. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
92171. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
92172. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
92173. Calcium Oxide combines with water to form calcium hydroxide.
92174. Propane burns in air to form carbon dioxide and water vapor and release heat.
92175. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
92176. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92177. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
92178. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
92179. Iron reacts with oxygen in air to form iron(III) oxide.
92180. Phosphorus reacts with oxygen to form phosphorus pentoxide.
92181. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
92182. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
92183. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
92184. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
92185. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
92186. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
92187. Hydrogen combines with oxygen to form water.
92188. Butane burns in air to form carbon dioxide and water vapor and release heat.
92189. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
92190. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92191. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
92192. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
92193. Copper reacts with oxygen in air to form copper(II) oxide.
92194. Hydrogen reacts with oxygen to form water.
92195. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
92196. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

92197. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
92198. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
92199. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
92200. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
92201. Nitrogen combines with hydrogen to form ammonia.
92202. Carbon Monoxide burns in air to form carbon dioxide and release heat.
92203. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
92204. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92205. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
92206. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
92207. Lead reacts with oxygen in air to form lead(II) oxide.
92208. Nitrogen reacts with oxygen to form nitrogen oxides.
92209. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
92210. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
92211. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
92212. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
92213. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
92214. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
92215. Sulfur combines with oxygen to form sulfur dioxide.
92216. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
92217. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
92218. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92219. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
92220. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
92221. Magnesium reacts with oxygen in air to form magnesium oxide.
92222. Silicon reacts with oxygen to form silicon dioxide.
92223. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
92224. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
92225. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
92226. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
92227. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
92228. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
92229. Carbon combines with oxygen to form carbon dioxide.
92230. Hydrogen burns in air to form water vapor and release heat.
92231. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
92232. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92233. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
92234. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
92235. Calcium reacts with oxygen in air to form calcium oxide.
92236. Carbon reacts with oxygen to form carbon dioxide.
92237. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
92238. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
92239. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
92240. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
92241. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
92242. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
92243. Phosphorus combines with oxygen to form phosphorus pentoxide.
92244. Methane burns in air to form carbon dioxide and water vapor and release heat.
92245. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
92246. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92247. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
92248. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
92249. Aluminium reacts with oxygen in air to form aluminium oxide.
92250. Sulfur reacts with oxygen to form sulfur dioxide.
92251. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
92252. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
92253. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
92254. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
92255. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
92256. On heating, hydrogen peroxide decomposes to form water and oxygen.
92257. Magnesium combines with oxygen to form magnesium oxide.
92258. Ethane burns in air to form carbon dioxide and water vapor and release heat.
92259. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
92260. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92261. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
92262. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
92263. Zinc reacts with oxygen in air to form zinc oxide.
92264. Phosphorus reacts with oxygen to form phosphorus pentoxide.
92265. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
92266. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
92267. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
92268. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
92269. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
92270. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
92271. Iron combines with sulfur to form iron sulfide.
92272. Propane burns in air to form carbon dioxide and water vapor and release heat.
92273. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
92274. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92275. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
92276. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
92277. Iron reacts with oxygen in air to form iron(III) oxide.
92278. Hydrogen reacts with oxygen to form water.
92279. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
92280. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
92281. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
92282. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
92283. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
92284. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
92285. Calcium Oxide combines with water to form calcium hydroxide.
92286. Butane burns in air to form carbon dioxide and water vapor and release heat.
92287. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
92288. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92289. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
92290. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
92291. Copper reacts with oxygen in air to form copper(II) oxide.
92292. Nitrogen reacts with oxygen to form nitrogen oxides.
92293. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
92294. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
92295. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
92296. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
92297. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
92298. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
92299. Hydrogen combines with oxygen to form water.
92300. Carbon Monoxide burns in air to form carbon dioxide and release heat.
92301. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
92302. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92303. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
92304. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
92305. Lead reacts with oxygen in air to form lead(II) oxide.
92306. Silicon reacts with oxygen to form silicon dioxide.
92307. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
92308. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
92309. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
92310. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
92311. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
92312. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
92313. Nitrogen combines with hydrogen to form ammonia.
92314. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
92315. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
92316. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92317. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
92318. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
92319. Magnesium reacts with oxygen in air to form magnesium oxide.
92320. Carbon reacts with oxygen to form carbon dioxide.
92321. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
92322. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
92323. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
92324. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
92325. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
92326. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
92327. Sulfur combines with oxygen to form sulfur dioxide.
92328. Hydrogen burns in air to form water vapor and release heat.
92329. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
92330. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92331. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
92332. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
92333. Calcium reacts with oxygen in air to form calcium oxide.
92334. Sulfur reacts with oxygen to form sulfur dioxide.
92335. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
92336. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
92337. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
92338. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
92339. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
92340. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
92341. Carbon combines with oxygen to form carbon dioxide.
92342. Methane burns in air to form carbon dioxide and water vapor and release heat.
92343. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
92344. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92345. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
92346. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
92347. Aluminium reacts with oxygen in air to form aluminium oxide.
92348. Phosphorus reacts with oxygen to form phosphorus pentoxide.
92349. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
92350. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
92351. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
92352. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
92353. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
92354. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
92355. Phosphorus combines with oxygen to form phosphorus pentoxide.
92356. Ethane burns in air to form carbon dioxide and water vapor and release heat.
92357. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
92358. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92359. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
92360. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
92361. Zinc reacts with oxygen in air to form zinc oxide.
92362. Hydrogen reacts with oxygen to form water.
92363. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
92364. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
92365. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
92366. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
92367. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
92368. On heating, hydrogen peroxide decomposes to form water and oxygen.
92369. Magnesium combines with oxygen to form magnesium oxide.
92370. Propane burns in air to form carbon dioxide and water vapor and release heat.
92371. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
92372. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92373. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
92374. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
92375. Iron reacts with oxygen in air to form iron(III) oxide.
92376. Nitrogen reacts with oxygen to form nitrogen oxides.
92377. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
92378. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
92379. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
92380. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
92381. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

92382. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

92383. Iron combines with sulfur to form iron sulfide.

92384. Butane burns in air to form carbon dioxide and water vapor and release heat.

92385. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

92386. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92387. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

92388. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

92389. Copper reacts with oxygen in air to form copper(II) oxide.

92390. Silicon reacts with oxygen to form silicon dioxide.

92391. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

92392. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

92393. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

92394. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

92395. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

92396. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

92397. Calcium Oxide combines with water to form calcium hydroxide.

92398. Carbon Monoxide burns in air to form carbon dioxide and release heat.

92399. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

92400. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92401. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.

92402. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

92403. Lead reacts with oxygen in air to form lead(II) oxide.

92404. Carbon reacts with oxygen to form carbon dioxide.

92405. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

92406. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

92407. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

92408. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

92409. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

92410. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

92411. Hydrogen combines with oxygen to form water.

92412. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

92413. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

92414. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92415. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.

92416. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

92417. Magnesium reacts with oxygen in air to form magnesium oxide.

92418. Sulfur reacts with oxygen to form sulfur dioxide.

92419. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

92420. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

92421. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

92422. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

92423. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

92424. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

92425. Nitrogen combines with hydrogen to form ammonia.

92426. Ethane burns in air to form water vapor and release heat.

92427. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

92428. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92429. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.

92430. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

92431. Calcium reacts with oxygen in air to form calcium oxide.

92432. Phosphorus reacts with oxygen to form phosphorus pentoxide.

92433. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

92434. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

92435. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

92436. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

92437. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

92438. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

92439. Sulfur combines with oxygen to form sulfur dioxide.

92440. Methane burns in air to form carbon dioxide and water vapor and release heat.

92441. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

92442. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92443. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.

92444. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

92445. Aluminium reacts with oxygen in air to form aluminium oxide.

92446. Hydrogen reacts with oxygen to form water.

92447. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

92448. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

92449. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

92450. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

92451. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

92452. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

92453. Carbon combines with oxygen to form carbon dioxide.

92454. Ethane burns in air to form carbon dioxide and water vapor and release heat.

92455. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

92456. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92457. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.

92458. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

92459. Zinc reacts with oxygen in air to form zinc oxide.

92460. Nitrogen reacts with oxygen to form nitrogen oxides.

92461. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

92462. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

92463. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

92464. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

92465. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

92466. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

92467. Phosphorus combines with oxygen to form phosphorus pentoxide.

92468. Propane burns in air to form carbon dioxide and water vapor and release heat.

92469. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

92470. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92471. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.

92472. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

92473. Iron reacts with oxygen in air to form iron(III) oxide.

92474. Silicon reacts with oxygen to form silicon dioxide.

92475. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

92476. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

92477. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

92478. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

92479. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

92480. On heating, hydrogen peroxide decomposes to form water and oxygen.

92481. Magnesium combines with oxygen to form magnesium oxide.

92482. Butane burns in air to form carbon dioxide and water vapor and release heat.

92483. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

92484. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92485. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.

92486. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

92487. Copper reacts with oxygen in air to form copper(II) oxide.

92488. Carbon reacts with oxygen to form carbon dioxide.

92489. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

92490. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

92491. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

92492. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

92493. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

92494. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

92495. Iron combines with sulfur to form iron sulfide.

92496. Carbon Monoxide burns in air to form carbon dioxide and release heat.

92497. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

92498. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92499. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.

92500. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

92501. Lead reacts with oxygen in air to form lead(II) oxide.

92502. Sulfur reacts with oxygen to form sulfur dioxide.

92503. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

92504. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

92505. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

92506. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

92507. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

92508. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

92509. Calcium Oxide combines with water to form calcium hydroxide.

92510. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

92511. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

92512. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92513. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

92514. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

92515. Magnesium reacts with oxygen in air to form magnesium oxide.

92516. Phosphorus reacts with oxygen to form phosphorus pentoxide.

92517. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

92518. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

92519. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

92520. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

92521. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

92522. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

92523. Hydrogen combines with oxygen to form water.

92524. Hydrogen burns in air to form water vapor and release heat.

92525. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

92526. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92527. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

92528. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

92529. Calcium reacts with oxygen in air to form calcium oxide.

92530. Hydrogen reacts with oxygen to form water.

92531. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

92532. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

92533. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

92534. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

92535. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

92536. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

92537. Nitrogen combines with hydrogen to form ammonia.

92538. Methane burns in air to form carbon dioxide and water vapor and release heat.

92539. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

92540. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92541. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

92542. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

92543. Aluminium reacts with oxygen in air to form aluminium oxide.

92544. Nitrogen reacts with oxygen to form nitrogen oxides.

92545. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

92546. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

92547. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

92548. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

92549. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

92550. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

92551. Sulfur combines with oxygen to form sulfur dioxide.

92552. Ethane burns in air to form carbon dioxide and water vapor and release heat.

92553. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

92554. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92555. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.

92556. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

92557. Zinc reacts with oxygen in air to form zinc oxide.

92558. Silicon reacts with oxygen to form silicon dioxide.

92559. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

92560. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

92561. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

92562. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

92563. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

92564. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

92565. Carbon combines with oxygen to form carbon dioxide.

92566. Propane burns in air to form carbon dioxide and water vapor and release heat.

92567. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
92568. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92569. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
92570. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
92571. Iron reacts with oxygen in air to form iron(III) oxide.
92572. Carbon reacts with oxygen to form carbon dioxide.
92573. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
92574. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
92575. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
92576. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
92577. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
92578. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
92579. Phosphorus combines with oxygen to form phosphorus pentoxide.
92580. Butane burns in air to form carbon dioxide and water vapor and release heat.
92581. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
92582. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92583. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
92584. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
92585. Copper reacts with oxygen in air to form copper(II) oxide.
92586. Sulfur reacts with oxygen to form sulfur dioxide.
92587. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
92588. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
92589. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
92590. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
92591. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
92592. On heating, hydrogen peroxide decomposes to form water and oxygen.
92593. Magnesium combines with oxygen to form magnesium oxide.
92594. Carbon Monoxide burns in air to form carbon dioxide and release heat.
92595. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
92596. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92597. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
92598. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
92599. Lead reacts with oxygen in air to form lead(II) oxide.
92600. Phosphorus reacts with oxygen to form phosphorus pentoxide.
92601. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
92602. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
92603. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
92604. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
92605. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
92606. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
92607. Iron combines with sulfur to form iron sulfide.
92608. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
92609. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
92610. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92611. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
92612. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
92613. Magnesium reacts with oxygen in air to form magnesium oxide.
92614. Hydrogen reacts with oxygen to form water.
92615. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
92616. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
92617. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
92618. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
92619. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
92620. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
92621. Calcium Oxide combines with water to form calcium hydroxide.
92622. Hydrogen burns in air to form water vapor and release heat.
92623. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
92624. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92625. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
92626. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
92627. Calcium reacts with oxygen in air to form calcium oxide.
92628. Nitrogen reacts with oxygen to form nitrogen oxides.
92629. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
92630. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
92631. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
92632. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
92633. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
92634. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
92635. Hydrogen combines with oxygen to form water.
92636. Methane burns in air to form carbon dioxide and water vapor and release heat.
92637. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
92638. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92639. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
92640. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
92641. Aluminium reacts with oxygen in air to form aluminium oxide.
92642. Silicon reacts with oxygen to form silicon dioxide.
92643. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
92644. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
92645. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
92646. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
92647. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
92648. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
92649. Nitrogen combines with hydrogen to form ammonia.
92650. Ethane burns in air to form carbon dioxide and water vapor and release heat.
92651. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
92652. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92653. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
92654. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
92655. Zinc reacts with oxygen in air to form zinc oxide.
92656. Carbon reacts with oxygen to form carbon dioxide.
92657. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
92658. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

92659. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

92660. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

92661. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

92662. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

92663. Sulfur combines with oxygen to form sulfur dioxide.

92664. Propane burns in air to form carbon dioxide and water vapor and release heat.

92665. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

92666. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92667. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

92668. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

92669. Iron reacts with oxygen in air to form iron(III) oxide.

92670. Sulfur reacts with oxygen to form sulfur dioxide.

92671. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

92672. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

92673. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

92674. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

92675. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

92676. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

92677. Carbon combines with oxygen to form carbon dioxide.

92678. Butane burns in air to form carbon dioxide and water vapor and release heat.

92679. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

92680. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92681. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

92682. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

92683. Copper reacts with oxygen in air to form copper(II) oxide.

92684. Phosphorus reacts with oxygen to form phosphorus pentoxide.

92685. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

92686. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

92687. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

92688. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

92689. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

92690. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

92691. Phosphorus combines with oxygen to form phosphorus pentoxide.

92692. Carbon Monoxide burns in air to form carbon dioxide and release heat.

92693. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

92694. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92695. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

92696. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

92697. Lead reacts with oxygen in air to form lead(II) oxide.

92698. Hydrogen reacts with oxygen to form water.

92699. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

92700. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

92701. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

92702. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

92703. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

92704. On heating, hydrogen peroxide decomposes to form water and oxygen.

92705. Magnesium combines with oxygen to form magnesium oxide.

92706. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

92707. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

92708. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92709. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

92710. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

92711. Magnesium reacts with oxygen in air to form magnesium oxide.

92712. Nitrogen reacts with oxygen to form nitrogen oxides.

92713. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

92714. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

92715. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

92716. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

92717. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

92718. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

92719. Iron combines with sulfur to form iron sulfide.

92720. Hydrogen burns in air to form water vapor and release heat.

92721. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

92722. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92723. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

92724. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

92725. Calcium reacts with oxygen in air to form calcium oxide.

92726. Silicon reacts with oxygen to form silicon dioxide.

92727. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

92728. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

92729. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

92730. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

92731. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

92732. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

92733. Calcium Oxide combines with water to form calcium hydroxide.

92734. Methane burns in air to form carbon dioxide and water vapor and release heat.

92735. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

92736. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92737. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.

92738. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

92739. Aluminium reacts with oxygen in air to form aluminium oxide.

92740. Carbon reacts with oxygen to form carbon dioxide.

92741. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

92742. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

92743. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

92744. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

92745. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

92746. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

92747. Hydrogen combines with oxygen to form water.

92748. Ethane burns in air to form carbon dioxide and water vapor and release heat.

92749. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

92750. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92751. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.

92752. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

92753. Zinc reacts with oxygen in air to form zinc oxide.
92754. Sulfur reacts with oxygen to form sulfur dioxide.
92755. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
92756. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
92757. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
92758. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
92759. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
92760. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
92761. Nitrogen combines with hydrogen to form ammonia.
92762. Propane burns in air to form carbon dioxide and water vapor and release heat.
92763. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
92764. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92765. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
92766. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
92767. Iron reacts with oxygen in air to form iron(III) oxide.
92768. Phosphorus reacts with oxygen to form phosphorus pentoxide.
92769. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
92770. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
92771. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
92772. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
92773. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
92774. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
92775. Sulfur combines with oxygen to form sulfur dioxide.
92776. Butane burns in air to form carbon dioxide and water vapor and release heat.
92777. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
92778. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92779. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
92780. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
92781. Copper reacts with oxygen in air to form copper(II) oxide.
92782. Hydrogen reacts with oxygen to form water.
92783. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
92784. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
92785. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
92786. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
92787. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
92788. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
92789. Carbon combines with oxygen to form carbon dioxide.
92790. Carbon Monoxide burns in air to form carbon dioxide and release heat.
92791. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
92792. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92793. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
92794. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
92795. Lead reacts with oxygen in air to form lead(II) oxide.
92796. Nitrogen reacts with oxygen to form nitrogen oxides.
92797. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
92798. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
92799. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
92800. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
92801. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
92802. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
92803. Phosphorus combines with oxygen to form phosphorus pentoxide.
92804. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
92805. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
92806. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92807. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
92808. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
92809. Magnesium reacts with oxygen in air to form magnesium oxide.
92810. Silicon reacts with oxygen to form silicon dioxide.
92811. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
92812. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
92813. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
92814. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
92815. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
92816. On heating, hydrogen peroxide decomposes to form water and oxygen.
92817. Magnesium combines with oxygen to form magnesium oxide.
92818. Hydrogen burns in air to form water vapor and release heat.
92819. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
92820. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92821. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
92822. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
92823. Calcium reacts with oxygen in air to form calcium oxide.
92824. Carbon reacts with oxygen to form carbon dioxide.
92825. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
92826. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
92827. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
92828. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
92829. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
92830. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
92831. Iron combines with sulfur to form iron sulfide.
92832. Methane burns in air to form carbon dioxide and water vapor and release heat.
92833. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
92834. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92835. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
92836. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
92837. Aluminium reacts with oxygen in air to form aluminium oxide.
92838. Sulfur reacts with oxygen to form sulfur dioxide.
92839. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
92840. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
92841. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
92842. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
92843. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
92844. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
92845. Calcium Oxide combines with water to form calcium hydroxide.

92846. Ethane burns in air to form carbon dioxide and water vapor and release heat.

92847. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

92848. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92849. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

92850. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

92851. Zinc reacts with oxygen in air to form zinc oxide.

92852. Phosphorus reacts with oxygen to form phosphorus pentoxide.

92853. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

92854. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

92855. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

92856. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

92857. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

92858. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

92859. Hydrogen combines with oxygen to form water.

92860. Propane burns in air to form carbon dioxide and water vapor and release heat.

92861. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

92862. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92863. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

92864. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

92865. Iron reacts with oxygen in air to form iron(III) oxide.

92866. Hydrogen reacts with oxygen to form water.

92867. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

92868. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

92869. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

92870. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

92871. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

92872. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

92873. Nitrogen combines with hydrogen to form ammonia.

92874. Butane burns in air to form carbon dioxide and water vapor and release heat.

92875. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

92876. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92877. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

92878. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

92879. Copper reacts with oxygen in air to form copper(II) oxide.

92880. Nitrogen reacts with oxygen to form nitrogen oxides.

92881. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

92882. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

92883. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

92884. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

92885. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

92886. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

92887. Sulfur combines with oxygen to form sulfur dioxide.

92888. Carbon Monoxide burns in air to form carbon dioxide and release heat.

92889. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

92890. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92891. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.

92892. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

92893. Lead reacts with oxygen in air to form lead(II) oxide.

92894. Silicon reacts with oxygen to form silicon dioxide.

92895. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

92896. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

92897. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

92898. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

92899. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

92900. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

92901. Carbon combines with oxygen to form carbon dioxide.

92902. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

92903. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

92904. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92905. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.

92906. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

92907. Magnesium reacts with oxygen in air to form magnesium oxide.

92908. Carbon reacts with oxygen to form carbon dioxide.

92909. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

92910. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

92911. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

92912. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

92913. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

92914. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

92915. Phosphorus combines with oxygen to form phosphorus pentoxide.

92916. Hydrogen burns in air to form water vapor and release heat.

92917. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

92918. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92919. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

92920. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

92921. Calcium reacts with oxygen in air to form calcium oxide.

92922. Sulfur reacts with oxygen to form sulfur dioxide.

92923. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

92924. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

92925. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

92926. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

92927. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

92928. On heating, hydrogen peroxide decomposes to form water and oxygen.

92929. Magnesium combines with oxygen to form magnesium oxide.

92930. Methane burns in air to form carbon dioxide and water vapor and release heat.

92931. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

92932. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

92933. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

92934. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

92935. Aluminium reacts with oxygen in air to form aluminium oxide.

92936. Phosphorus reacts with oxygen to form phosphorus pentoxide.

92937. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

92938. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

92939. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
92940. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
92941. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
92942. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
92943. Iron combines with sulfur to form iron sulfide.
92944. Ethane burns in air to form carbon dioxide and water vapor and release heat.
92945. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
92946. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92947. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
92948. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
92949. Zinc reacts with oxygen in air to form zinc oxide.
92950. Hydrogen reacts with oxygen to form water.
92951. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
92952. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
92953. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
92954. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
92955. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
92956. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
92957. Calcium Oxide combines with water to form calcium hydroxide.
92958. Propane burns in air to form carbon dioxide and water vapor and release heat.
92959. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
92960. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92961. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
92962. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
92963. Iron reacts with oxygen in air to form iron(III) oxide.
92964. Nitrogen reacts with oxygen to form nitrogen oxides.
92965. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
92966. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
92967. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
92968. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
92969. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
92970. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
92971. Hydrogen combines with oxygen to form water.
92972. Butane burns in air to form carbon dioxide and water vapor and release heat.
92973. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
92974. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92975. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
92976. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
92977. Copper reacts with oxygen in air to form copper(II) oxide.
92978. Silicon reacts with oxygen to form silicon dioxide.
92979. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
92980. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
92981. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
92982. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
92983. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
92984. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
92985. Nitrogen combines with hydrogen to form ammonia.
92986. Carbon Monoxide burns in air to form carbon dioxide and release heat.
92987. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
92988. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
92989. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
92990. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
92991. Lead reacts with oxygen in air to form lead(II) oxide.
92992. Carbon reacts with oxygen to form carbon dioxide.
92993. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
92994. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
92995. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
92996. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
92997. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
92998. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
92999. Sulfur combines with oxygen to form sulfur dioxide.
93000. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
93001. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
93002. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93003. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
93004. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
93005. Magnesium reacts with oxygen in air to form magnesium oxide.
93006. Sulfur reacts with oxygen to form sulfur dioxide.
93007. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
93008. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
93009. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
93010. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
93011. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
93012. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
93013. Carbon combines with oxygen to form carbon dioxide.
93014. Hydrogen burns in air to form water vapor and release heat.
93015. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
93016. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93017. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
93018. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
93019. Calcium reacts with oxygen in air to form calcium oxide.
93020. Phosphorus reacts with oxygen to form phosphorus pentoxide.
93021. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
93022. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
93023. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
93024. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
93025. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
93026. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
93027. Phosphorus combines with oxygen to form phosphorus pentoxide.
93028. Methane burns in air to form carbon dioxide and water vapor and release heat.
93029. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
93030. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93031. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

93032. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

93033. Aluminium reacts with oxygen in air to form aluminium oxide.

93034. Hydrogen reacts with oxygen to form water.

93035. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

93036. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

93037. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

93038. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

93039. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

93040. On heating, hydrogen peroxide decomposes to form water and oxygen.

93041. Magnesium combines with oxygen to form magnesium oxide.

93042. Ethane burns in air to form carbon dioxide and water vapor and release heat.

93043. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

93044. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93045. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

93046. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

93047. Zinc reacts with oxygen in air to form zinc oxide.

93048. Nitrogen reacts with oxygen to form nitrogen oxides.

93049. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

93050. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

93051. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

93052. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

93053. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

93054. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

93055. Iron combines with sulfur to form iron sulfide.

93056. Propane burns in air to form carbon dioxide and water vapor and release heat.

93057. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

93058. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93059. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

93060. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

93061. Iron reacts with oxygen in air to form iron(III) oxide.

93062. Silicon reacts with oxygen to form silicon dioxide.

93063. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

93064. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

93065. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

93066. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

93067. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

93068. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

93069. Calcium Oxide combines with water to form calcium hydroxide.

93070. Butane burns in air to form carbon dioxide and water vapor and release heat.

93071. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

93072. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93073. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.

93074. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

93075. Copper reacts with oxygen in air to form copper(II) oxide.

93076. Carbon reacts with oxygen to form carbon dioxide.

93077. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

93078. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

93079. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

93080. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

93081. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

93082. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

93083. Hydrogen combines with oxygen to form water.

93084. Carbon Monoxide burns in air to form carbon dioxide and release heat.

93085. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

93086. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93087. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.

93088. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

93089. Lead reacts with oxygen in air to form lead(II) oxide.

93090. Sulfur reacts with oxygen to form sulfur dioxide.

93091. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

93092. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

93093. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

93094. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

93095. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

93096. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

93097. Nitrogen combines with hydrogen to form ammonia.

93098. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

93099. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

93100. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93101. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.

93102. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

93103. Magnesium reacts with oxygen in air to form magnesium oxide.

93104. Phosphorus reacts with oxygen to form phosphorus pentoxide.

93105. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

93106. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

93107. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

93108. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

93109. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

93110. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

93111. Sulfur combines with oxygen to form sulfur dioxide.

93112. Hydrogen burns in air to form water vapor and release heat.

93113. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

93114. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93115. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.

93116. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

93117. Calcium reacts with oxygen in air to form calcium oxide.

93118. Hydrogen reacts with oxygen to form water.

93119. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

93120. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

93121. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

93122. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

93123. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

93124. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

93125. Carbon combines with oxygen to form carbon dioxide.

93126. Methane burns in air to form carbon dioxide and water vapor and release heat.

93127. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

93128. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93129. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.

93130. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

93131. Aluminium reacts with oxygen in air to form aluminium oxide.

93132. Nitrogen reacts with oxygen to form nitrogen oxides.

93133. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

93134. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

93135. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

93136. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

93137. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

93138. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

93139. Phosphorus combines with oxygen to form phosphorus pentoxide.

93140. Ethane burns in air to form carbon dioxide and water vapor and release heat.

93141. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

93142. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93143. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.

93144. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

93145. Zinc reacts with oxygen in air to form zinc oxide.

93146. Silicon reacts with oxygen to form silicon dioxide.

93147. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

93148. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

93149. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

93150. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

93151. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

93152. On heating, hydrogen peroxide decomposes to form water and oxygen.

93153. Magnesium combines with oxygen to form magnesium oxide.

93154. Propane burns in air to form carbon dioxide and water vapor and release heat.

93155. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

93156. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93157. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.

93158. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

93159. Iron reacts with oxygen in air to form iron(III) oxide.

93160. Carbon reacts with oxygen to form carbon dioxide.

93161. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

93162. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

93163. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

93164. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

93165. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

93166. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

93167. Iron combines with sulfur to form iron sulfide.

93168. Butane burns in air to form carbon dioxide and water vapor and release heat.

93169. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

93170. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93171. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.

93172. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

93173. Copper reacts with oxygen in air to form copper(II) oxide.

93174. Sulfur reacts with oxygen to form sulfur dioxide.

93175. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

93176. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

93177. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

93178. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

93179. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

93180. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

93181. Calcium Oxide combines with water to form calcium hydroxide.

93182. Carbon Monoxide burns in air to form carbon dioxide and release heat.

93183. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

93184. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93185. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

93186. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

93187. Lead reacts with oxygen in air to form lead(II) oxide.

93188. Phosphorus reacts with oxygen to form phosphorus pentoxide.

93189. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

93190. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

93191. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

93192. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

93193. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

93194. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

93195. Hydrogen combines with oxygen to form water.

93196. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

93197. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

93198. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93199. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

93200. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

93201. Magnesium reacts with oxygen in air to form magnesium oxide.

93202. Hydrogen reacts with oxygen to form water.

93203. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

93204. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

93205. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

93206. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

93207. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

93208. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

93209. Nitrogen combines with hydrogen to form ammonia.

93210. Hydrogen burns in air to form water vapor and release heat.

93211. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

93212. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93213. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

93214. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

93215. Calcium reacts with oxygen in air to form calcium oxide.

93216. Nitrogen reacts with oxygen to form nitrogen oxides.

93217. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
93218. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
93219. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
93220. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
93221. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
93222. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
93223. Sulfur combines with oxygen to form sulfur dioxide.
93224. Methane burns in air to form carbon dioxide and water vapor and release heat.
93225. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
93226. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93227. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
93228. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
93229. Aluminium reacts with oxygen in air to form aluminium oxide.
93230. Silicon reacts with oxygen to form silicon dioxide.
93231. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
93232. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
93233. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
93234. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
93235. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
93236. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
93237. Carbon combines with oxygen to form carbon dioxide.
93238. Ethane burns in air to form carbon dioxide and water vapor and release heat.
93239. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
93240. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93241. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
93242. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
93243. Zinc reacts with oxygen in air to form zinc oxide.
93244. Carbon reacts with oxygen to form carbon dioxide.
93245. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
93246. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
93247. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
93248. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
93249. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
93250. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
93251. Phosphorus combines with oxygen to form phosphorus pentoxide.
93252. Propane burns in air to form carbon dioxide and water vapor and release heat.
93253. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
93254. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93255. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
93256. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
93257. Iron reacts with oxygen in air to form iron(III) oxide.
93258. Sulfur reacts with oxygen to form sulfur dioxide.
93259. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
93260. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
93261. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
93262. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
93263. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
93264. On heating, hydrogen peroxide decomposes to form water and oxygen.
93265. Magnesium combines with oxygen to form magnesium oxide.
93266. Butane burns in air to form carbon dioxide and water vapor and release heat.
93267. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
93268. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93269. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
93270. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
93271. Copper reacts with oxygen in air to form copper(II) oxide.
93272. Phosphorus reacts with oxygen to form phosphorus pentoxide.
93273. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
93274. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
93275. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
93276. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
93277. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
93278. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
93279. Iron combines with sulfur to form iron sulfide.
93280. Carbon Monoxide burns in air to form carbon dioxide and release heat.
93281. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
93282. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93283. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
93284. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
93285. Lead reacts with oxygen in air to form lead(II) oxide.
93286. Hydrogen reacts with oxygen to form water.
93287. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
93288. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
93289. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
93290. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
93291. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
93292. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
93293. Calcium Oxide combines with water to form calcium hydroxide.
93294. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
93295. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
93296. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93297. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
93298. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
93299. Magnesium reacts with oxygen in air to form magnesium oxide.
93300. Nitrogen reacts with oxygen to form nitrogen oxides.
93301. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
93302. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
93303. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
93304. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
93305. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
93306. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
93307. Hydrogen combines with oxygen to form water.
93308. Hydrogen burns in air to form water vapor and release heat.

93309. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
93310. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93311. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
93312. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
93313. Calcium reacts with oxygen in air to form calcium oxide.
93314. Silicon reacts with oxygen to form silicon dioxide.
93315. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
93316. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
93317. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
93318. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
93319. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
93320. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
93321. Nitrogen combines with hydrogen to form ammonia.
93322. Methane burns in air to form carbon dioxide and water vapor and release heat.
93323. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
93324. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93325. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
93326. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
93327. Aluminium reacts with oxygen in air to form aluminium oxide.
93328. Carbon reacts with oxygen to form carbon dioxide.
93329. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
93330. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
93331. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
93332. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
93333. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
93334. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
93335. Sulfur combines with oxygen to form sulfur dioxide.
93336. Ethane burns in air to form carbon dioxide and water vapor and release heat.
93337. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
93338. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93339. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
93340. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
93341. Zinc reacts with oxygen in air to form zinc oxide.
93342. Sulfur reacts with oxygen to form sulfur dioxide.
93343. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
93344. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
93345. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
93346. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
93347. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
93348. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
93349. Carbon combines with oxygen to form carbon dioxide.
93350. Propane burns in air to form carbon dioxide and water vapor and release heat.
93351. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
93352. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93353. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
93354. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
93355. Iron reacts with oxygen in air to form iron(III) oxide.
93356. Phosphorus reacts with oxygen to form phosphorus pentoxide.
93357. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
93358. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
93359. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
93360. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
93361. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
93362. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
93363. Phosphorus combines with oxygen to form phosphorus pentoxide.
93364. Butane burns in air to form carbon dioxide and water vapor and release heat.
93365. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
93366. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93367. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
93368. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
93369. Copper reacts with oxygen in air to form copper(II) oxide.
93370. Hydrogen reacts with oxygen to form water.
93371. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
93372. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
93373. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
93374. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
93375. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
93376. On heating, hydrogen peroxide decomposes to form water and oxygen.
93377. Magnesium combines with oxygen to form magnesium oxide.
93378. Carbon Monoxide burns in air to form carbon dioxide and release heat.
93379. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
93380. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93381. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
93382. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
93383. Lead reacts with oxygen in air to form lead(II) oxide.
93384. Nitrogen reacts with oxygen to form nitrogen oxides.
93385. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
93386. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
93387. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
93388. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
93389. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
93390. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
93391. Iron combines with sulfur to form iron sulfide.
93392. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
93393. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
93394. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93395. Iron reacts with nitric acid to form iron(III) nitrate and hydrogen gas.
93396. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
93397. Magnesium reacts with oxygen in air to form magnesium oxide.
93398. Silicon reacts with oxygen to form silicon dioxide.
93399. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
93400. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
93401. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

93402. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
93403. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
93404. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
93405. Calcium Oxide combines with water to form calcium hydroxide.
93406. Hydrogen burns in air to form water vapor and release heat.
93407. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
93408. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93409. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
93410. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
93411. Calcium reacts with oxygen in air to form calcium oxide.
93412. Carbon reacts with oxygen to form carbon dioxide.
93413. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
93414. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
93415. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
93416. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
93417. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
93418. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
93419. Hydrogen combines with oxygen to form water.
93420. Methane burns in air to form carbon dioxide and water vapor and release heat.
93421. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
93422. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93423. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
93424. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
93425. Aluminium reacts with oxygen in air to form aluminium oxide.
93426. Sulfur reacts with oxygen to form sulfur dioxide.
93427. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
93428. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
93429. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
93430. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
93431. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
93432. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
93433. Nitrogen combines with hydrogen to form ammonia.
93434. Ethane burns in air to form carbon dioxide and water vapor and release heat.
93435. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
93436. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93437. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
93438. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
93439. Zinc reacts with oxygen in air to form zinc oxide.
93440. Phosphorus reacts with oxygen to form phosphorus pentoxide.
93441. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
93442. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
93443. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
93444. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
93445. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
93446. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
93447. Sulfur combines with oxygen to form sulfur dioxide.
93448. Propane burns in air to form carbon dioxide and water vapor and release heat.
93449. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
93450. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93451. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
93452. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
93453. Iron reacts with oxygen in air to form iron(III) oxide.
93454. Hydrogen reacts with oxygen to form water.
93455. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
93456. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
93457. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
93458. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
93459. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
93460. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
93461. Carbon combines with oxygen to form carbon dioxide.
93462. Butane burns in air to form carbon dioxide and water vapor and release heat.
93463. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
93464. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93465. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
93466. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
93467. Copper reacts with oxygen in air to form copper(II) oxide.
93468. Nitrogen reacts with oxygen to form nitrogen oxides.
93469. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
93470. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
93471. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
93472. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
93473. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
93474. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
93475. Phosphorus combines with oxygen to form phosphorus pentoxide.
93476. Carbon Monoxide burns in air to form carbon dioxide and release heat.
93477. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
93478. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93479. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
93480. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
93481. Lead reacts with oxygen in air to form lead(II) oxide.
93482. Silicon reacts with oxygen to form silicon dioxide.
93483. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
93484. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
93485. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
93486. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
93487. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
93488. On heating, hydrogen peroxide decomposes to form water and oxygen.
93489. Magnesium combines with oxygen to form magnesium oxide.
93490. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
93491. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
93492. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93493. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.

93494. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

93495. Magnesium reacts with oxygen in air to form magnesium oxide.

93496. Carbon reacts with oxygen to form carbon dioxide.

93497. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

93498. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

93499. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

93500. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

93501. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

93502. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

93503. Iron combines with sulfur to form iron sulfide.

93504. Hydrogen burns in air to form water vapor and release heat.

93505. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

93506. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93507. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.

93508. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

93509. Calcium reacts with oxygen in air to form calcium oxide.

93510. Sulfur reacts with oxygen to form sulfur dioxide.

93511. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

93512. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

93513. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

93514. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

93515. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

93516. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

93517. Calcium Oxide combines with water to form calcium hydroxide.

93518. Methane burns in air to form carbon dioxide and water vapor and release heat.

93519. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

93520. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93521. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

93522. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

93523. Aluminium reacts with oxygen in air to form aluminium oxide.

93524. Phosphorus reacts with oxygen to form phosphorus pentoxide.

93525. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

93526. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

93527. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

93528. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

93529. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

93530. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

93531. Hydrogen combines with oxygen to form water.

93532. Ethane burns in air to form carbon dioxide and water vapor and release heat.

93533. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

93534. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93535. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

93536. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

93537. Zinc reacts with oxygen in air to form zinc oxide.

93538. Hydrogen reacts with oxygen to form water.

93539. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

93540. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

93541. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

93542. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

93543. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

93544. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

93545. Nitrogen combines with hydrogen to form ammonia.

93546. Propane burns in air to form carbon dioxide and water vapor and release heat.

93547. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

93548. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93549. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

93550. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

93551. Iron reacts with oxygen in air to form iron(III) oxide.

93552. Nitrogen reacts with oxygen to form nitrogen oxides.

93553. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

93554. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

93555. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

93556. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

93557. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

93558. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

93559. Sulfur combines with oxygen to form sulfur dioxide.

93560. Butane burns in air to form carbon dioxide and water vapor and release heat.

93561. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

93562. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93563. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.

93564. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

93565. Copper reacts with oxygen in air to form copper(II) oxide.

93566. Silicon reacts with oxygen to form silicon dioxide.

93567. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

93568. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

93569. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

93570. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

93571. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

93572. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

93573. Carbon combines with oxygen to form carbon dioxide.

93574. Carbon Monoxide burns in air to form carbon dioxide and release heat.

93575. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

93576. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93577. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.

93578. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

93579. Lead reacts with oxygen in air to form lead(II) oxide.

93580. Carbon reacts with oxygen to form carbon dioxide.

93581. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

93582. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

93583. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

93584. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

93585. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

93586. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

93587. Phosphorus combines with oxygen to form phosphorus pentoxide.

93588. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

93589. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

93590. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93591. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

93592. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

93593. Magnesium reacts with oxygen in air to form magnesium oxide.

93594. Sulfur reacts with oxygen to form sulfur dioxide.

93595. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

93596. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

93597. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

93598. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

93599. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

93600. On heating, hydrogen peroxide decomposes to form water and oxygen.

93601. Magnesium combines with oxygen to form magnesium oxide.

93602. Hydrogen burns in air to form water vapor and release heat.

93603. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

93604. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93605. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

93606. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

93607. Calcium reacts with oxygen in air to form calcium oxide.

93608. Phosphorus reacts with oxygen to form phosphorus pentoxide.

93609. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

93610. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

93611. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

93612. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

93613. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

93614. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

93615. Iron combines with sulfur to form iron sulfide.

93616. Methane burns in air to form carbon dioxide and water vapor and release heat.

93617. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

93618. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93619. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

93620. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

93621. Aluminium reacts with oxygen in air to form aluminium oxide.

93622. Hydrogen reacts with oxygen to form water.

93623. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

93624. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

93625. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

93626. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

93627. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

93628. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

93629. Calcium Oxide combines with water to form calcium hydroxide.

93630. Ethane burns in air to form carbon dioxide and water vapor and release heat.

93631. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

93632. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93633. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

93634. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

93635. Zinc reacts with oxygen in air to form zinc oxide.

93636. Nitrogen reacts with oxygen to form nitrogen oxides.

93637. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

93638. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

93639. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

93640. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

93641. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

93642. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

93643. Hydrogen combines with oxygen to form water.

93644. Propane burns in air to form carbon dioxide and water vapor and release heat.

93645. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

93646. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93647. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

93648. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

93649. Iron reacts with oxygen in air to form iron(III) oxide.

93650. Silicon reacts with oxygen to form silicon dioxide.

93651. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

93652. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

93653. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

93654. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

93655. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

93656. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

93657. Nitrogen combines with hydrogen to form ammonia.

93658. Butane burns in air to form carbon dioxide and water vapor and release heat.

93659. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

93660. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93661. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

93662. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

93663. Copper reacts with oxygen in air to form copper(II) oxide.

93664. Carbon reacts with oxygen to form carbon dioxide.

93665. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

93666. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

93667. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

93668. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

93669. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

93670. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

93671. Sulfur combines with oxygen to form sulfur dioxide.

93672. Carbon Monoxide burns in air to form carbon dioxide and release heat.

93673. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

93674. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93675. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

93676. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

93677. Lead reacts with oxygen in air to form lead(II) oxide.
93678. Sulfur reacts with oxygen to form sulfur dioxide.
93679. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
93680. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
93681. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
93682. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
93683. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
93684. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
93685. Carbon combines with oxygen to form carbon dioxide.
93686. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
93687. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
93688. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93689. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
93690. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
93691. Magnesium reacts with oxygen in air to form magnesium oxide.
93692. Phosphorus reacts with oxygen to form phosphorus pentoxide.
93693. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
93694. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
93695. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
93696. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
93697. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
93698. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
93699. Phosphorus combines with oxygen to form phosphorus pentoxide.
93700. Hydrogen burns in air to form water vapor and release heat.
93701. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
93702. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93703. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
93704. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
93705. Calcium reacts with oxygen in air to form calcium oxide.
93706. Hydrogen reacts with oxygen to form water.
93707. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
93708. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
93709. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
93710. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
93711. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
93712. On heating, hydrogen peroxide decomposes to form water and oxygen.
93713. Magnesium combines with oxygen to form magnesium oxide.
93714. Methane burns in air to form carbon dioxide and water vapor and release heat.
93715. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
93716. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93717. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
93718. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
93719. Aluminium reacts with oxygen in air to form aluminium oxide.
93720. Nitrogen reacts with oxygen to form nitrogen oxides.
93721. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
93722. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
93723. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
93724. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
93725. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
93726. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
93727. Iron combines with sulfur to form iron sulfide.
93728. Ethane burns in air to form carbon dioxide and water vapor and release heat.
93729. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
93730. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93731. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
93732. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
93733. Zinc reacts with oxygen in air to form zinc oxide.
93734. Silicon reacts with oxygen to form silicon dioxide.
93735. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
93736. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
93737. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
93738. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
93739. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
93740. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
93741. Calcium Oxide combines with water to form calcium hydroxide.
93742. Propane burns in air to form carbon dioxide and water vapor and release heat.
93743. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
93744. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93745. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
93746. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
93747. Iron reacts with oxygen in air to form iron(III) oxide.
93748. Carbon reacts with oxygen to form carbon dioxide.
93749. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
93750. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
93751. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
93752. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
93753. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
93754. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
93755. Hydrogen combines with oxygen to form water.
93756. Butane burns in air to form carbon dioxide and water vapor and release heat.
93757. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
93758. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93759. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
93760. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
93761. Copper reacts with oxygen in air to form copper(II) oxide.
93762. Sulfur reacts with oxygen to form sulfur dioxide.
93763. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
93764. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
93765. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
93766. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
93767. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
93768. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
93769. Nitrogen combines with hydrogen to form ammonia.
93770. Carbon Monoxide burns in air to form carbon dioxide and release heat.

93771. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

93772. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93773. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.

93774. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

93775. Lead reacts with oxygen in air to form lead(II) oxide.

93776. Phosphorus reacts with oxygen to form phosphorus pentoxide.

93777. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

93778. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

93779. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

93780. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

93781. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

93782. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

93783. Sulfur combines with oxygen to form sulfur dioxide.

93784. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

93785. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

93786. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93787. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.

93788. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

93789. Magnesium reacts with oxygen in air to form magnesium oxide.

93790. Hydrogen reacts with oxygen to form water.

93791. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

93792. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

93793. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

93794. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

93795. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

93796. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

93797. Carbon combines with oxygen to form carbon dioxide.

93798. Hydrogen burns in air to form water vapor and release heat.

93799. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

93800. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93801. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.

93802. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

93803. Calcium reacts with oxygen in air to form calcium oxide.

93804. Nitrogen reacts with oxygen to form nitrogen oxides.

93805. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

93806. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

93807. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

93808. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

93809. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

93810. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

93811. Phosphorus combines with oxygen to form phosphorus pentoxide.

93812. Methane burns in air to form carbon dioxide and water vapor and release heat.

93813. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

93814. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93815. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.

93816. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

93817. Aluminium reacts with oxygen in air to form aluminium oxide.

93818. Silicon reacts with oxygen to form silicon dioxide.

93819. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

93820. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

93821. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

93822. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

93823. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

93824. On heating, hydrogen peroxide decomposes to form water and oxygen.

93825. Magnesium combines with oxygen to form magnesium oxide.

93826. Ethane burns in air to form carbon dioxide and water vapor and release heat.

93827. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

93828. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93829. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.

93830. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

93831. Zinc reacts with oxygen in air to form zinc oxide.

93832. Carbon reacts with oxygen to form carbon dioxide.

93833. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

93834. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

93835. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

93836. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

93837. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

93838. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

93839. Iron combines with sulfur to form iron sulfide.

93840. Propane burns in air to form carbon dioxide and water vapor and release heat.

93841. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

93842. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93843. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.

93844. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

93845. Iron reacts with oxygen in air to form iron(III) oxide.

93846. Sulfur reacts with oxygen to form sulfur dioxide.

93847. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

93848. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

93849. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

93850. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

93851. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

93852. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

93853. Calcium Oxide combines with water to form calcium hydroxide.

93854. Butane burns in air to form carbon dioxide and water vapor and release heat.

93855. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

93856. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

93857. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

93858. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

93859. Copper reacts with oxygen in air to form copper(II) oxide.

93860. Phosphorus reacts with oxygen to form phosphorus pentoxide.

93861. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

93862. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

93863. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
93864. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
93865. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
93866. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
93867. Hydrogen combines with oxygen to form water.
93868. Carbon Monoxide burns in air to form carbon dioxide and release heat.
93869. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
93870. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93871. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
93872. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
93873. Lead reacts with oxygen in air to form lead(II) oxide.
93874. Hydrogen reacts with oxygen to form water.
93875. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
93876. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
93877. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
93878. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
93879. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
93880. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
93881. Nitrogen combines with hydrogen to form ammonia.
93882. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
93883. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
93884. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93885. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
93886. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
93887. Magnesium reacts with oxygen in air to form magnesium oxide.
93888. Nitrogen reacts with oxygen to form nitrogen oxides.
93889. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
93890. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
93891. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
93892. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
93893. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
93894. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
93895. Sulfur combines with oxygen to form sulfur dioxide.
93896. Hydrogen burns in air to form water vapor and release heat.
93897. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
93898. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93899. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
93900. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
93901. Calcium reacts with oxygen in air to form calcium oxide.
93902. Silicon reacts with oxygen to form silicon dioxide.
93903. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
93904. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
93905. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
93906. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
93907. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
93908. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
93909. Carbon combines with oxygen to form carbon dioxide.
93910. Methane burns in air to form carbon dioxide and water vapor and release heat.
93911. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
93912. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93913. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
93914. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
93915. Aluminium reacts with oxygen in air to form aluminium oxide.
93916. Carbon reacts with oxygen to form carbon dioxide.
93917. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
93918. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
93919. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
93920. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
93921. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
93922. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
93923. Phosphorus combines with oxygen to form phosphorus pentoxide.
93924. Ethane burns in air to form carbon dioxide and water vapor and release heat.
93925. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
93926. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93927. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
93928. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
93929. Zinc reacts with oxygen in air to form zinc oxide.
93930. Sulfur reacts with oxygen to form sulfur dioxide.
93931. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
93932. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
93933. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
93934. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
93935. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
93936. On heating, hydrogen peroxide decomposes to form water and oxygen.
93937. Magnesium combines with oxygen to form magnesium oxide.
93938. Propane burns in air to form carbon dioxide and water vapor and release heat.
93939. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
93940. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93941. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
93942. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
93943. Iron reacts with oxygen in air to form iron(III) oxide.
93944. Phosphorus reacts with oxygen to form phosphorus pentoxide.
93945. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
93946. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
93947. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
93948. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
93949. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
93950. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
93951. Iron combines with sulfur to form iron sulfide.
93952. Butane burns in air to form carbon dioxide and water vapor and release heat.
93953. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
93954. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93955. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

93956. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
93957. Copper reacts with oxygen in air to form copper(II) oxide.
93958. Hydrogen reacts with oxygen to form water.
93959. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
93960. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
93961. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
93962. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
93963. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
93964. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
93965. Calcium Oxide combines with water to form calcium hydroxide.
93966. Carbon Monoxide burns in air to form carbon dioxide and release heat.
93967. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
93968. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93969. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
93970. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
93971. Lead reacts with oxygen in air to form lead(II) oxide.
93972. Nitrogen reacts with oxygen to form nitrogen oxides.
93973. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
93974. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
93975. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
93976. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
93977. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
93978. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
93979. Hydrogen combines with oxygen to form water.
93980. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
93981. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
93982. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93983. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
93984. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
93985. Magnesium reacts with oxygen in air to form magnesium oxide.
93986. Silicon reacts with oxygen to form silicon dioxide.
93987. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
93988. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
93989. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
93990. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
93991. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
93992. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
93993. Nitrogen combines with hydrogen to form ammonia.
93994. Hydrogen burns in air to form water vapor and release heat.
93995. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
93996. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
93997. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
93998. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
93999. Calcium reacts with oxygen in air to form calcium oxide.
94000. Carbon reacts with oxygen to form carbon dioxide.
94001. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
94002. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
94003. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
94004. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
94005. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
94006. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
94007. Sulfur combines with oxygen to form sulfur dioxide.
94008. Methane burns in air to form carbon dioxide and water vapor and release heat.
94009. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
94010. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94011. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
94012. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
94013. Aluminium reacts with oxygen in air to form aluminium oxide.
94014. Sulfur reacts with oxygen to form sulfur dioxide.
94015. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
94016. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
94017. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
94018. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
94019. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
94020. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
94021. Carbon combines with oxygen to form carbon dioxide.
94022. Ethane burns in air to form carbon dioxide and water vapor and release heat.
94023. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
94024. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94025. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
94026. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
94027. Zinc reacts with oxygen in air to form zinc oxide.
94028. Phosphorus reacts with oxygen to form phosphorus pentoxide.
94029. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
94030. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
94031. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
94032. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
94033. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
94034. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
94035. Phosphorus combines with oxygen to form phosphorus pentoxide.
94036. Propane burns in air to form carbon dioxide and water vapor and release heat.
94037. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
94038. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94039. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
94040. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
94041. Iron reacts with oxygen in air to form iron(III) oxide.
94042. Hydrogen reacts with oxygen to form water.
94043. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
94044. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
94045. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
94046. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
94047. Iron(II) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

94048. On heating, hydrogen peroxide decomposes to form water and oxygen.
94049. Magnesium combines with oxygen to form magnesium oxide.
94050. Butane burns in air to form carbon dioxide and water vapor and release heat.
94051. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
94052. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94053. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
94054. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
94055. Copper reacts with oxygen in air to form copper(II) oxide.
94056. Nitrogen reacts with oxygen to form nitrogen oxides.
94057. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
94058. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
94059. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
94060. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
94061. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
94062. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
94063. Iron combines with sulfur to form iron sulfide.
94064. Carbon Monoxide burns in air to form carbon dioxide and release heat.
94065. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
94066. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94067. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
94068. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
94069. Lead reacts with oxygen in air to form lead(II) oxide.
94070. Silicon reacts with oxygen to form silicon dioxide.
94071. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
94072. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
94073. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
94074. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
94075. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
94076. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
94077. Calcium Oxide combines with water to form calcium hydroxide.
94078. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
94079. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
94080. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94081. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
94082. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
94083. Magnesium reacts with oxygen in air to form magnesium oxide.
94084. Carbon reacts with oxygen to form carbon dioxide.
94085. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
94086. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
94087. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
94088. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
94089. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
94090. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
94091. Hydrogen combines with oxygen to form water.
94092. Hydrogen burns in air to form water vapor and release heat.
94093. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
94094. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94095. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
94096. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
94097. Calcium reacts with oxygen in air to form calcium oxide.
94098. Sulfur reacts with oxygen to form sulfur dioxide.
94099. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
94100. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
94101. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
94102. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
94103. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
94104. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
94105. Nitrogen combines with hydrogen to form ammonia.
94106. Methane burns in air to form carbon dioxide and water vapor and release heat.
94107. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
94108. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94109. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
94110. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
94111. Aluminium reacts with oxygen in air to form aluminium oxide.
94112. Phosphorus reacts with oxygen to form phosphorus pentoxide.
94113. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
94114. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
94115. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
94116. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
94117. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
94118. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
94119. Sulfur combines with oxygen to form sulfur dioxide.
94120. Ethane burns in air to form carbon dioxide and water vapor and release heat.
94121. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
94122. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94123. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
94124. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
94125. Zinc reacts with oxygen in air to form zinc oxide.
94126. Hydrogen reacts with oxygen to form water.
94127. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
94128. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
94129. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
94130. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
94131. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
94132. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
94133. Carbon combines with oxygen to form carbon dioxide.
94134. Propane burns in air to form carbon dioxide and water vapor and release heat.
94135. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
94136. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94137. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
94138. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
94139. Iron reacts with oxygen in air to form iron(III) oxide.
94140. Nitrogen reacts with oxygen to form nitrogen oxides.

94141. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

94142. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

94143. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

94144. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

94145. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

94146. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

94147. Phosphorus combines with oxygen to form phosphorus pentoxide.

94148. Butane burns in air to form carbon dioxide and water vapor and release heat.

94149. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

94150. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

94151. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.

94152. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

94153. Copper reacts with oxygen in air to form copper(II) oxide.

94154. Silicon reacts with oxygen to form silicon dioxide.

94155. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

94156. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

94157. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

94158. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

94159. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

94160. On heating, hydrogen peroxide decomposes to form water and oxygen.

94161. Magnesium combines with oxygen to form magnesium oxide.

94162. Carbon Monoxide burns in air to form carbon dioxide and release heat.

94163. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

94164. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

94165. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.

94166. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

94167. Lead reacts with oxygen in air to form lead(II) oxide.

94168. Carbon reacts with oxygen to form carbon dioxide.

94169. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

94170. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

94171. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

94172. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

94173. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

94174. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

94175. Iron combines with sulfur to form iron sulfide.

94176. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

94177. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

94178. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

94179. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.

94180. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

94181. Magnesium reacts with oxygen in air to form magnesium oxide.

94182. Sulfur reacts with oxygen to form sulfur dioxide.

94183. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

94184. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

94185. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

94186. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

94187. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

94188. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

94189. Calcium Oxide combines with water to form calcium hydroxide.

94190. Hydrogen burns in air to form water vapor and release heat.

94191. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

94192. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

94193. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

94194. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

94195. Calcium reacts with oxygen in air to form calcium oxide.

94196. Phosphorus reacts with oxygen to form phosphorus pentoxide.

94197. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

94198. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

94199. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

94200. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

94201. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

94202. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

94203. Hydrogen combines with oxygen to form water.

94204. Methane burns in air to form carbon dioxide and water vapor and release heat.

94205. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

94206. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

94207. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

94208. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

94209. Aluminium reacts with oxygen in air to form aluminium oxide.

94210. Hydrogen reacts with oxygen to form water.

94211. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

94212. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

94213. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

94214. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

94215. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

94216. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

94217. Nitrogen combines with hydrogen to form ammonia.

94218. Ethane burns in air to form carbon dioxide and water vapor and release heat.

94219. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

94220. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

94221. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

94222. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

94223. Zinc reacts with oxygen in air to form zinc oxide.

94224. Nitrogen reacts with oxygen to form nitrogen oxides.

94225. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

94226. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

94227. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

94228. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

94229. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

94230. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

94231. Sulfur combines with oxygen to form sulfur dioxide.

94232. Propane burns in air to form carbon dioxide and water vapor and release heat.

94233. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
94234. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94235. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
94236. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
94237. Iron reacts with oxygen in air to form iron(III) oxide.
94238. Silicon reacts with oxygen to form silicon dioxide.
94239. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
94240. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
94241. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
94242. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
94243. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
94244. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
94245. Carbon combines with oxygen to form carbon dioxide.
94246. Butane burns in air to form carbon dioxide and water vapor and release heat.
94247. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
94248. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94249. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
94250. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
94251. Copper reacts with oxygen in air to form copper(II) oxide.
94252. Carbon reacts with oxygen to form carbon dioxide.
94253. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
94254. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
94255. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
94256. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
94257. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
94258. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
94259. Phosphorus combines with oxygen to form phosphorus pentoxide.
94260. Carbon Monoxide burns in air to form carbon dioxide and release heat.
94261. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
94262. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94263. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
94264. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
94265. Lead reacts with oxygen in air to form lead(II) oxide.
94266. Sulfur reacts with oxygen to form sulfur dioxide.
94267. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
94268. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
94269. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
94270. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
94271. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
94272. On heating, hydrogen peroxide decomposes to form water and oxygen.
94273. Magnesium combines with oxygen to form magnesium oxide.
94274. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
94275. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
94276. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94277. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
94278. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
94279. Magnesium reacts with oxygen in air to form magnesium oxide.
94280. Phosphorus reacts with oxygen to form phosphorus pentoxide.
94281. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
94282. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
94283. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
94284. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
94285. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
94286. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
94287. Iron combines with sulfur to form iron sulfide.
94288. Hydrogen burns in air to form water vapor and release heat.
94289. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
94290. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94291. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
94292. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
94293. Calcium reacts with oxygen in air to form calcium oxide.
94294. Hydrogen reacts with oxygen to form water.
94295. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
94296. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
94297. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
94298. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
94299. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
94300. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
94301. Calcium Oxide combines with water to form calcium hydroxide.
94302. Methane burns in air to form carbon dioxide and water vapor and release heat.
94303. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
94304. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94305. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
94306. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
94307. Aluminium reacts with oxygen in air to form aluminium oxide.
94308. Nitrogen reacts with oxygen to form nitrogen oxides.
94309. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
94310. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
94311. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
94312. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
94313. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
94314. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
94315. Hydrogen combines with oxygen to form water.
94316. Ethane burns in air to form carbon dioxide and water vapor and release heat.
94317. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
94318. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94319. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
94320. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
94321. Zinc reacts with oxygen in air to form zinc oxide.
94322. Silicon reacts with oxygen to form silicon dioxide.
94323. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
94324. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
94325. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

94326. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
94327. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
94328. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
94329. Nitrogen combines with hydrogen to form ammonia.
94330. Propane burns in air to form carbon dioxide and water vapor and release heat.
94331. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
94332. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94333. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
94334. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
94335. Iron reacts with oxygen in air to form iron(III) oxide.
94336. Carbon reacts with oxygen to form carbon dioxide.
94337. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
94338. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
94339. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
94340. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
94341. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
94342. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
94343. Sulfur combines with oxygen to form sulfur dioxide.
94344. Butane burns in air to form carbon dioxide and water vapor and release heat.
94345. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
94346. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94347. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
94348. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
94349. Copper reacts with oxygen in air to form copper(II) oxide.
94350. Sulfur reacts with oxygen to form sulfur dioxide.
94351. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
94352. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
94353. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
94354. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
94355. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
94356. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
94357. Carbon combines with oxygen to form carbon dioxide.
94358. Carbon Monoxide burns in air to form carbon dioxide and release heat.
94359. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
94360. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94361. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
94362. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
94363. Lead reacts with oxygen in air to form lead(II) oxide.
94364. Phosphorus reacts with oxygen to form phosphorus pentoxide.
94365. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
94366. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
94367. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
94368. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
94369. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
94370. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
94371. Phosphorus combines with oxygen to form phosphorus pentoxide.
94372. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
94373. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
94374. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94375. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
94376. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
94377. Magnesium reacts with oxygen in air to form magnesium oxide.
94378. Hydrogen reacts with oxygen to form water.
94379. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
94380. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
94381. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
94382. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
94383. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
94384. On heating, hydrogen peroxide decomposes to form water and oxygen.
94385. Magnesium combines with oxygen to form magnesium oxide.
94386. Hydrogen burns in air to form water vapor and release heat.
94387. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
94388. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94389. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
94390. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
94391. Calcium reacts with oxygen in air to form calcium oxide.
94392. Nitrogen reacts with oxygen to form nitrogen oxides.
94393. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
94394. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
94395. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
94396. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
94397. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
94398. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
94399. Iron combines with sulfur to form iron sulfide.
94400. Methane burns in air to form carbon dioxide and water vapor and release heat.
94401. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
94402. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94403. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
94404. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
94405. Aluminium reacts with oxygen in air to form aluminium oxide.
94406. Silicon reacts with oxygen to form silicon dioxide.
94407. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
94408. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
94409. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
94410. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
94411. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
94412. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
94413. Calcium Oxide combines with water to form calcium hydroxide.
94414. Ethane burns in air to form carbon dioxide and water vapor and release heat.
94415. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
94416. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94417. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
94418. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
94419. Zinc reacts with oxygen in air to form zinc oxide.

94420. Carbon reacts with oxygen to form carbon dioxide.
94421. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
94422. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
94423. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
94424. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
94425. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
94426. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
94427. Hydrogen combines with oxygen to form water.
94428. Propane burns in air to form carbon dioxide and water vapor and release heat.
94429. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
94430. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94431. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
94432. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
94433. Iron reacts with oxygen in air to form iron(III) oxide.
94434. Sulfur reacts with oxygen to form sulfur dioxide.
94435. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
94436. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
94437. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
94438. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
94439. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
94440. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
94441. Nitrogen combines with hydrogen to form ammonia.
94442. Butane burns in air to form carbon dioxide and water vapor and release heat.
94443. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
94444. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94445. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
94446. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
94447. Copper reacts with oxygen in air to form copper(II) oxide.
94448. Phosphorus reacts with oxygen to form phosphorus pentoxide.
94449. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
94450. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
94451. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
94452. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
94453. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
94454. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
94455. Sulfur combines with oxygen to form sulfur dioxide.
94456. Carbon Monoxide burns in air to form carbon dioxide and release heat.
94457. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
94458. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94459. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
94460. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
94461. Lead reacts with oxygen in air to form lead(II) oxide.
94462. Hydrogen reacts with oxygen to form water.
94463. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
94464. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
94465. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
94466. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
94467. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
94468. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
94469. Carbon combines with oxygen to form carbon dioxide.
94470. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
94471. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
94472. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94473. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
94474. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
94475. Magnesium reacts with oxygen in air to form magnesium oxide.
94476. Nitrogen reacts with oxygen to form nitrogen oxides.
94477. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
94478. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
94479. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
94480. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
94481. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
94482. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
94483. Phosphorus combines with oxygen to form phosphorus pentoxide.
94484. Hydrogen burns in air to form water vapor and release heat.
94485. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
94486. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94487. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
94488. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
94489. Calcium reacts with oxygen in air to form calcium oxide.
94490. Silicon reacts with oxygen to form silicon dioxide.
94491. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
94492. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
94493. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
94494. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
94495. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
94496. On heating, hydrogen peroxide decomposes to form water and oxygen.
94497. Magnesium combines with oxygen to form magnesium oxide.
94498. Methane burns in air to form carbon dioxide and water vapor and release heat.
94499. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
94500. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94501. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
94502. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
94503. Aluminium reacts with oxygen in air to form aluminium oxide.
94504. Carbon reacts with oxygen to form carbon dioxide.
94505. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
94506. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
94507. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
94508. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
94509. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
94510. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

94511. Iron combines with sulfur to form iron sulfide.
94512. Ethane burns in air to form carbon dioxide and water vapor and release heat.
94513. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
94514. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94515. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
94516. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
94517. Zinc reacts with oxygen in air to form zinc oxide.
94518. Sulfur reacts with oxygen to form sulfur dioxide.
94519. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
94520. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
94521. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
94522. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
94523. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
94524. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
94525. Calcium Oxide combines with water to form calcium hydroxide.
94526. Propane burns in air to form carbon dioxide and water vapor and release heat.
94527. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
94528. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94529. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
94530. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
94531. Iron reacts with oxygen in air to form iron(III) oxide.
94532. Phosphorus reacts with oxygen to form phosphorus pentoxide.
94533. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
94534. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
94535. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
94536. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
94537. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
94538. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
94539. Hydrogen combines with oxygen to form water.
94540. Butane burns in air to form carbon dioxide and water vapor and release heat.
94541. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
94542. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94543. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
94544. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
94545. Copper reacts with oxygen in air to form copper(II) oxide.
94546. Hydrogen reacts with oxygen to form water.
94547. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
94548. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
94549. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
94550. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
94551. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
94552. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
94553. Nitrogen combines with hydrogen to form ammonia.
94554. Carbon Monoxide burns in air to form carbon dioxide and release heat.
94555. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
94556. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94557. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
94558. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
94559. Lead reacts with oxygen in air to form lead(II) oxide.
94560. Nitrogen reacts with oxygen to form nitrogen oxides.
94561. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
94562. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
94563. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
94564. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
94565. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
94566. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
94567. Sulfur combines with oxygen to form sulfur dioxide.
94568. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
94569. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
94570. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94571. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
94572. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
94573. Magnesium reacts with oxygen in air to form magnesium oxide.
94574. Silicon reacts with oxygen to form silicon dioxide.
94575. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
94576. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
94577. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
94578. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
94579. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
94580. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
94581. Carbon combines with oxygen to form carbon dioxide.
94582. Hydrogen burns in air to form water vapor and release heat.
94583. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
94584. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94585. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
94586. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
94587. Calcium reacts with oxygen in air to form calcium oxide.
94588. Carbon reacts with oxygen to form carbon dioxide.
94589. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
94590. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
94591. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
94592. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
94593. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
94594. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
94595. Phosphorus combines with oxygen to form phosphorus pentoxide.
94596. Methane burns in air to form carbon dioxide and water vapor and release heat.
94597. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
94598. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94599. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
94600. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
94601. Aluminium reacts with oxygen in air to form aluminium oxide.
94602. Sulfur reacts with oxygen to form sulfur dioxide.
94603. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

94604. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

94605. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

94606. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

94607. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

94608. On heating, hydrogen peroxide decomposes to form water and oxygen.

94609. Magnesium combines with oxygen to form magnesium oxide.

94610. Ethane burns in air to form carbon dioxide and water vapor and release heat.

94611. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

94612. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

94613. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

94614. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

94615. Zinc reacts with oxygen in air to form zinc oxide.

94616. Phosphorus reacts with oxygen to form phosphorus pentoxide.

94617. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

94618. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

94619. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

94620. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

94621. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

94622. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

94623. Iron combines with sulfur to form iron sulfide.

94624. Propane burns in air to form carbon dioxide and water vapor and release heat.

94625. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

94626. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

94627. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

94628. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

94629. Iron reacts with oxygen in air to form iron(III) oxide.

94630. Hydrogen reacts with oxygen to form water.

94631. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

94632. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

94633. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

94634. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

94635. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

94636. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

94637. Calcium Oxide combines with water to form calcium hydroxide.

94638. Butane burns in air to form carbon dioxide and water vapor and release heat.

94639. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

94640. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

94641. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

94642. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

94643. Copper reacts with oxygen in air to form copper(II) oxide.

94644. Nitrogen reacts with oxygen to form nitrogen oxides.

94645. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

94646. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

94647. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

94648. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

94649. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

94650. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

94651. Hydrogen combines with oxygen to form water.

94652. Carbon Monoxide burns in air to form carbon dioxide and release heat.

94653. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

94654. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

94655. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

94656. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

94657. Lead reacts with oxygen in air to form lead(II) oxide.

94658. Silicon reacts with oxygen to form silicon dioxide.

94659. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

94660. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

94661. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

94662. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

94663. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

94664. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

94665. Nitrogen combines with hydrogen to form ammonia.

94666. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

94667. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

94668. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

94669. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

94670. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

94671. Magnesium reacts with oxygen in air to form magnesium oxide.

94672. Carbon reacts with oxygen to form carbon dioxide.

94673. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

94674. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

94675. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

94676. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

94677. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

94678. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

94679. Sulfur combines with oxygen to form sulfur dioxide.

94680. Hydrogen burns in air to form water vapor and release heat.

94681. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

94682. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

94683. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

94684. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

94685. Calcium reacts with oxygen in air to form calcium oxide.

94686. Sulfur reacts with oxygen to form sulfur dioxide.

94687. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

94688. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

94689. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

94690. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

94691. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

94692. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

94693. Carbon combines with oxygen to form carbon dioxide.

94694. Methane burns in air to form carbon dioxide and water vapor and release heat.

94695. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

94696. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94697. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
94698. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
94699. Aluminium reacts with oxygen in air to form aluminium oxide.
94700. Phosphorus reacts with oxygen to form phosphorus pentoxide.
94701. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
94702. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
94703. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
94704. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
94705. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
94706. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
94707. Phosphorus combines with oxygen to form phosphorus pentoxide.
94708. Ethane burns in air to form carbon dioxide and water vapor and release heat.
94709. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
94710. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94711. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
94712. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
94713. Zinc reacts with oxygen in air to form zinc oxide.
94714. Hydrogen reacts with oxygen to form water.
94715. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
94716. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
94717. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
94718. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
94719. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
94720. On heating, hydrogen peroxide decomposes to form water and oxygen.
94721. Magnesium combines with oxygen to form magnesium oxide.
94722. Propane burns in air to form carbon dioxide and water vapor and release heat.
94723. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
94724. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94725. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
94726. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
94727. Iron reacts with oxygen in air to form iron(III) oxide.
94728. Nitrogen reacts with oxygen to form nitrogen oxides.
94729. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
94730. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
94731. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
94732. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
94733. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
94734. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
94735. Iron combines with sulfur to form iron sulfide.
94736. Butane burns in air to form carbon dioxide and water vapor and release heat.
94737. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
94738. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94739. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
94740. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
94741. Copper reacts with oxygen in air to form copper(II) oxide.
94742. Silicon reacts with oxygen to form silicon dioxide.
94743. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
94744. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
94745. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
94746. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
94747. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
94748. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
94749. Calcium Oxide combines with water to form calcium hydroxide.
94750. Carbon Monoxide burns in air to form carbon dioxide and release heat.
94751. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
94752. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94753. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
94754. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
94755. Lead reacts with oxygen in air to form lead(II) oxide.
94756. Carbon reacts with oxygen to form carbon dioxide.
94757. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
94758. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
94759. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
94760. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
94761. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
94762. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
94763. Hydrogen combines with oxygen to form water.
94764. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
94765. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
94766. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94767. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
94768. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
94769. Magnesium reacts with oxygen in air to form magnesium oxide.
94770. Sulfur reacts with oxygen to form sulfur dioxide.
94771. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
94772. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
94773. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
94774. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
94775. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
94776. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
94777. Nitrogen combines with hydrogen to form ammonia.
94778. Hydrogen burns in air to form water vapor and release heat.
94779. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
94780. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94781. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
94782. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
94783. Calcium reacts with oxygen in air to form calcium oxide.
94784. Phosphorus reacts with oxygen to form phosphorus pentoxide.
94785. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
94786. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
94787. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
94788. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
94789. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

94790. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
94791. Sulfur combines with oxygen to form sulfur dioxide.
94792. Methane burns in air to form carbon dioxide and water vapor and release heat.
94793. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
94794. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94795. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
94796. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
94797. Aluminium reacts with oxygen in air to form aluminium oxide.
94798. Hydrogen reacts with oxygen to form water.
94799. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
94800. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
94801. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
94802. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
94803. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
94804. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
94805. Carbon combines with oxygen to form carbon dioxide.
94806. Ethane burns in air to form carbon dioxide and water vapor and release heat.
94807. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
94808. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94809. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
94810. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
94811. Zinc reacts with oxygen in air to form zinc oxide.
94812. Nitrogen reacts with oxygen to form nitrogen oxides.
94813. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
94814. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
94815. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
94816. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
94817. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
94818. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
94819. Phosphorus combines with oxygen to form phosphorus pentoxide.
94820. Propane burns in air to form carbon dioxide and water vapor and release heat.
94821. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
94822. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94823. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
94824. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
94825. Iron reacts with oxygen in air to form iron(III) oxide.
94826. Silicon reacts with oxygen to form silicon dioxide.
94827. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
94828. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
94829. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
94830. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
94831. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
94832. On heating, hydrogen peroxide decomposes to form water and oxygen.
94833. Magnesium combines with oxygen to form magnesium oxide.
94834. Butane burns in air to form carbon dioxide and water vapor and release heat.
94835. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
94836. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94837. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
94838. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
94839. Copper reacts with oxygen in air to form copper(II) oxide.
94840. Carbon reacts with oxygen to form carbon dioxide.
94841. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
94842. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
94843. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
94844. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
94845. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
94846. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
94847. Iron combines with sulfur to form iron sulfide.
94848. Carbon Monoxide burns in air to form carbon dioxide and release heat.
94849. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
94850. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94851. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
94852. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
94853. Lead reacts with oxygen in air to form lead(II) oxide.
94854. Sulfur reacts with oxygen to form sulfur dioxide.
94855. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
94856. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
94857. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
94858. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
94859. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
94860. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
94861. Calcium Oxide combines with water to form calcium hydroxide.
94862. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
94863. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
94864. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94865. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
94866. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
94867. Magnesium reacts with oxygen in air to form magnesium oxide.
94868. Phosphorus reacts with oxygen to form phosphorus pentoxide.
94869. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
94870. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
94871. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
94872. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
94873. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
94874. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
94875. Hydrogen combines with oxygen to form water.
94876. Hydrogen burns in air to form water vapor and release heat.
94877. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
94878. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94879. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
94880. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
94881. Calcium reacts with oxygen in air to form calcium oxide.
94882. Hydrogen reacts with oxygen to form water.

94883. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
94884. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
94885. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
94886. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
94887. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
94888. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
94889. Nitrogen combines with hydrogen to form ammonia.
94890. Methane burns in air to form carbon dioxide and water vapor and release heat.
94891. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
94892. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94893. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
94894. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
94895. Aluminium reacts with oxygen in air to form aluminium oxide.
94896. Nitrogen reacts with oxygen to form nitrogen oxides.
94897. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
94898. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
94899. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
94900. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
94901. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
94902. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
94903. Sulfur combines with oxygen to form sulfur dioxide.
94904. Ethane burns in air to form carbon dioxide and water vapor and release heat.
94905. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
94906. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94907. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
94908. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
94909. Zinc reacts with oxygen in air to form zinc oxide.
94910. Silicon reacts with oxygen to form silicon dioxide.
94911. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
94912. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
94913. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
94914. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
94915. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
94916. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
94917. Carbon combines with oxygen to form carbon dioxide.
94918. Propane burns in air to form carbon dioxide and water vapor and release heat.
94919. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
94920. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94921. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
94922. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
94923. Iron reacts with oxygen in air to form iron(III) oxide.
94924. Carbon reacts with oxygen to form carbon dioxide.
94925. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
94926. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
94927. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
94928. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
94929. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
94930. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
94931. Phosphorus combines with oxygen to form phosphorus pentoxide.
94932. Butane burns in air to form carbon dioxide and water vapor and release heat.
94933. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
94934. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94935. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
94936. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
94937. Copper reacts with oxygen in air to form copper(II) oxide.
94938. Sulfur reacts with oxygen to form sulfur dioxide.
94939. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
94940. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
94941. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
94942. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
94943. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
94944. On heating, hydrogen peroxide decomposes to form water and oxygen.
94945. Magnesium combines with oxygen to form magnesium oxide.
94946. Carbon Monoxide burns in air to form carbon dioxide and release heat.
94947. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
94948. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94949. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
94950. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
94951. Lead reacts with oxygen in air to form lead(II) oxide.
94952. Phosphorus reacts with oxygen to form phosphorus pentoxide.
94953. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
94954. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
94955. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
94956. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
94957. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
94958. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
94959. Iron combines with sulfur to form iron sulfide.
94960. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
94961. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
94962. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
94963. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
94964. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
94965. Magnesium reacts with oxygen in air to form magnesium oxide.
94966. Hydrogen reacts with oxygen to form water.
94967. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
94968. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
94969. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
94970. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
94971. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
94972. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
94973. Calcium Oxide combines with water to form calcium hydroxide.
94974. Hydrogen burns in air to form water vapor and release heat.

94975. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

94976. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

94977. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

94978. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

94979. Calcium reacts with oxygen in air to form calcium oxide.

94980. Nitrogen reacts with oxygen to form nitrogen oxides.

94981. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

94982. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

94983. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

94984. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

94985. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

94986. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

94987. Hydrogen combines with oxygen to form water.

94988. Methane burns in air to form carbon dioxide and water vapor and release heat.

94989. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

94990. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

94991. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

94992. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

94993. Aluminium reacts with oxygen in air to form aluminium oxide.

94994. Silicon reacts with oxygen to form silicon dioxide.

94995. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

94996. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

94997. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

94998. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

94999. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

95000. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

95001. Nitrogen combines with hydrogen to form ammonia.

95002. Ethane burns in air to form carbon dioxide and water vapor and release heat.

95003. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

95004. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95005. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

95006. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

95007. Zinc reacts with oxygen in air to form zinc oxide.

95008. Carbon reacts with oxygen to form carbon dioxide.

95009. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

95010. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

95011. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

95012. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

95013. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

95014. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

95015. Sulfur combines with oxygen to form sulfur dioxide.

95016. Propane burns in air to form carbon dioxide and water vapor and release heat.

95017. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

95018. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95019. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

95020. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

95021. Iron reacts with oxygen in air to form iron(III) oxide.

95022. Sulfur reacts with oxygen to form sulfur dioxide.

95023. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

95024. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

95025. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

95026. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

95027. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

95028. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

95029. Carbon combines with oxygen to form carbon dioxide.

95030. Butane burns in air to form carbon dioxide and water vapor and release heat.

95031. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

95032. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95033. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

95034. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

95035. Copper reacts with oxygen in air to form copper(II) oxide.

95036. Phosphorus reacts with oxygen to form phosphorus pentoxide.

95037. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

95038. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

95039. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

95040. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

95041. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

95042. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

95043. Phosphorus combines with oxygen to form phosphorus pentoxide.

95044. Carbon Monoxide burns in air to form carbon dioxide and release heat.

95045. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

95046. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95047. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

95048. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

95049. Lead reacts with oxygen in air to form lead(II) oxide.

95050. Hydrogen reacts with oxygen to form water.

95051. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

95052. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

95053. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

95054. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

95055. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

95056. On heating, hydrogen peroxide decomposes to form water and oxygen.

95057. Magnesium combines with oxygen to form magnesium oxide.

95058. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

95059. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

95060. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95061. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

95062. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

95063. Magnesium reacts with oxygen in air to form magnesium oxide.

95064. Nitrogen reacts with oxygen to form nitrogen oxides.

95065. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

95066. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

95067. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

95068. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

95069. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

95070. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

95071. Iron combines with sulfur to form iron sulfide.

95072. Hydrogen burns in air to form water vapor and release heat.

95073. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

95074. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95075. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

95076. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

95077. Calcium reacts with oxygen in air to form calcium oxide.

95078. Silicon reacts with oxygen to form silicon dioxide.

95079. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

95080. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

95081. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

95082. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

95083. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

95084. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

95085. Calcium Oxide combines with water to form calcium hydroxide.

95086. Methane burns in air to form carbon dioxide and water vapor and release heat.

95087. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

95088. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95089. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.

95090. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

95091. Aluminium reacts with oxygen in air to form aluminium oxide.

95092. Carbon reacts with oxygen to form carbon dioxide.

95093. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

95094. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

95095. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

95096. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

95097. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

95098. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

95099. Hydrogen combines with oxygen to form water.

95100. Ethane burns in air to form carbon dioxide and water vapor and release heat.

95101. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

95102. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95103. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.

95104. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

95105. Zinc reacts with oxygen in air to form zinc oxide.

95106. Sulfur reacts with oxygen to form sulfur dioxide.

95107. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

95108. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

95109. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

95110. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

95111. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

95112. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

95113. Nitrogen combines with hydrogen to form ammonia.

95114. Propane burns in air to form carbon dioxide and water vapor and release heat.

95115. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

95116. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95117. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.

95118. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

95119. Iron reacts with oxygen in air to form iron(III) oxide.

95120. Phosphorus reacts with oxygen to form phosphorus pentoxide.

95121. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

95122. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

95123. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

95124. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

95125. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

95126. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

95127. Sulfur combines with oxygen to form sulfur dioxide.

95128. Butane burns in air to form carbon dioxide and water vapor and release heat.

95129. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

95130. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95131. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.

95132. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

95133. Copper reacts with oxygen in air to form copper(II) oxide.

95134. Hydrogen reacts with oxygen to form water.

95135. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

95136. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

95137. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

95138. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

95139. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

95140. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

95141. Carbon combines with oxygen to form carbon dioxide.

95142. Carbon Monoxide burns in air to form carbon dioxide and release heat.

95143. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

95144. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95145. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.

95146. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

95147. Lead reacts with oxygen in air to form lead(II) oxide.

95148. Nitrogen reacts with oxygen to form nitrogen oxides.

95149. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

95150. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

95151. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

95152. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

95153. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

95154. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

95155. Phosphorus combines with oxygen to form phosphorus pentoxide.

95156. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

95157. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

95158. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95159. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.

95160. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
95161. Magnesium reacts with oxygen in air to form magnesium oxide.
95162. Silicon reacts with oxygen to form silicon dioxide.
95163. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
95164. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
95165. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
95166. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
95167. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
95168. On heating, hydrogen peroxide decomposes to form water and oxygen.
95169. Magnesium combines with oxygen to form magnesium oxide.
95170. Hydrogen burns in air to form water vapor and release heat.
95171. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
95172. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95173. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
95174. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
95175. Calcium reacts with oxygen in air to form calcium oxide.
95176. Carbon reacts with oxygen to form carbon dioxide.
95177. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
95178. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
95179. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
95180. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
95181. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
95182. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
95183. Iron combines with sulfur to form iron sulfide.
95184. Methane burns in air to form carbon dioxide and water vapor and release heat.
95185. Copper(I) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
95186. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95187. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
95188. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
95189. Aluminium reacts with oxygen in air to form aluminium oxide.
95190. Sulfur reacts with oxygen to form sulfur dioxide.
95191. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
95192. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
95193. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
95194. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
95195. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
95196. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
95197. Calcium Oxide combines with water to form calcium hydroxide.
95198. Ethane burns in air to form carbon dioxide and water vapor and release heat.
95199. Copper(I) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
95200. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95201. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
95202. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
95203. Zinc reacts with oxygen in air to form zinc oxide.
95204. Phosphorus reacts with oxygen to form phosphorus pentoxide.
95205. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
95206. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
95207. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
95208. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
95209. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
95210. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
95211. Hydrogen combines with oxygen to form water.
95212. Propane burns in air to form carbon dioxide and water vapor and release heat.
95213. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
95214. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95215. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
95216. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
95217. Iron reacts with oxygen in air to form iron(III) oxide.
95218. Hydrogen reacts with oxygen to form water.
95219. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
95220. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
95221. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
95222. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
95223. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
95224. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
95225. Nitrogen combines with hydrogen to form ammonia.
95226. Butane burns in air to form carbon dioxide and water vapor and release heat.
95227. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
95228. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95229. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
95230. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
95231. Copper reacts with oxygen in air to form copper(II) oxide.
95232. Nitrogen reacts with oxygen to form nitrogen oxides.
95233. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
95234. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
95235. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
95236. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
95237. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
95238. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
95239. Sulfur combines with oxygen to form sulfur dioxide.
95240. Carbon Monoxide burns in air to form carbon dioxide and release heat.
95241. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
95242. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95243. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
95244. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
95245. Lead reacts with oxygen in air to form lead(II) oxide.
95246. Silicon reacts with oxygen to form silicon dioxide.
95247. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
95248. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
95249. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
95250. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
95251. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
95252. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
95253. Carbon combines with oxygen to form carbon dioxide.

95254. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

95255. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

95256. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95257. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.

95258. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

95259. Magnesium reacts with oxygen in air to form magnesium oxide.

95260. Carbon reacts with oxygen to form carbon dioxide.

95261. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

95262. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

95263. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

95264. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

95265. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

95266. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

95267. Phosphorus combines with oxygen to form phosphorus pentoxide.

95268. Hydrogen burns in air to form water vapor and release heat.

95269. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

95270. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95271. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

95272. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

95273. Calcium reacts with oxygen in air to form calcium oxide.

95274. Sulfur reacts with oxygen to form sulfur dioxide.

95275. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

95276. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

95277. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

95278. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

95279. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

95280. On heating, hydrogen peroxide decomposes to form water and oxygen.

95281. Magnesium combines with oxygen to form magnesium oxide.

95282. Methane burns in air to form carbon dioxide and water vapor and release heat.

95283. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

95284. Copper(I) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95285. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

95286. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

95287. Aluminium reacts with oxygen in air to form aluminium oxide.

95288. Phosphorus reacts with oxygen to form phosphorus pentoxide.

95289. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

95290. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

95291. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

95292. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

95293. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

95294. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

95295. Iron combines with sulfur to form iron sulfide.

95296. Ethane burns in air to form carbon dioxide and water vapor and release heat.

95297. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

95298. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95299. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

95300. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

95301. Zinc reacts with oxygen in air to form zinc oxide.

95302. Hydrogen reacts with oxygen to form water.

95303. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

95304. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

95305. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

95306. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

95307. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

95308. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

95309. Calcium Oxide combines with water to form calcium hydroxide.

95310. Propane burns in air to form carbon dioxide and water vapor and release heat.

95311. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

95312. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95313. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

95314. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

95315. Iron reacts with oxygen in air to form iron(III) oxide.

95316. Nitrogen reacts with oxygen to form nitrogen oxides.

95317. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

95318. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

95319. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

95320. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

95321. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

95322. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

95323. Hydrogen combines with oxygen to form water.

95324. Butane burns in air to form carbon dioxide and water vapor and release heat.

95325. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

95326. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95327. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

95328. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

95329. Copper reacts with oxygen in air to form copper(II) oxide.

95330. Silicon reacts with oxygen to form silicon dioxide.

95331. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

95332. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

95333. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

95334. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

95335. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

95336. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

95337. Nitrogen combines with hydrogen to form ammonia.

95338. Carbon Monoxide burns in air to form carbon dioxide and release heat.

95339. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

95340. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95341. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

95342. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

95343. Lead reacts with oxygen in air to form lead(II) oxide.

95344. Carbon reacts with oxygen to form carbon dioxide.

95345. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

95346. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

95347. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

95348. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

95349. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

95350. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

95351. Sulfur combines with oxygen to form sulfur dioxide.

95352. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

95353. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

95354. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95355. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

95356. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

95357. Magnesium reacts with oxygen in air to form magnesium oxide.

95358. Sulfur reacts with oxygen to form sulfur dioxide.

95359. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

95360. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

95361. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

95362. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

95363. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

95364. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

95365. Carbon combines with oxygen to form carbon dioxide.

95366. Hydrogen burns in air to form water vapor and release heat.

95367. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

95368. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95369. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

95370. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

95371. Calcium reacts with oxygen in air to form calcium oxide.

95372. Phosphorus reacts with oxygen to form phosphorus pentoxide.

95373. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

95374. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

95375. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

95376. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

95377. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

95378. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

95379. Phosphorus combines with oxygen to form phosphorus pentoxide.

95380. Methane burns in air to form carbon dioxide and water vapor and release heat.

95381. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

95382. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95383. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

95384. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

95385. Aluminium reacts with oxygen in air to form aluminium oxide.

95386. Hydrogen reacts with oxygen to form water.

95387. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

95388. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

95389. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

95390. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

95391. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

95392. On heating, hydrogen peroxide decomposes to form water and oxygen.

95393. Magnesium combines with oxygen to form magnesium oxide.

95394. Ethane burns in air to form carbon dioxide and water vapor and release heat.

95395. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

95396. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95397. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

95398. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

95399. Zinc reacts with oxygen in air to form zinc oxide.

95400. Nitrogen reacts with oxygen to form nitrogen oxides.

95401. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

95402. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

95403. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

95404. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

95405. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

95406. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

95407. Iron combines with sulfur to form iron sulfide.

95408. Propane burns in air to form carbon dioxide and water vapor and release heat.

95409. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

95410. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95411. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

95412. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

95413. Iron reacts with oxygen in air to form iron(III) oxide.

95414. Silicon reacts with oxygen to form silicon dioxide.

95415. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

95416. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

95417. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

95418. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

95419. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

95420. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

95421. Calcium Oxide combines with water to form calcium hydroxide.

95422. Butane burns in air to form carbon dioxide and water vapor and release heat.

95423. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

95424. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95425. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.

95426. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

95427. Copper reacts with oxygen in air to form copper(II) oxide.

95428. Carbon reacts with oxygen to form carbon dioxide.

95429. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

95430. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

95431. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

95432. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

95433. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

95434. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

95435. Hydrogen combines with oxygen to form water.

95436. Carbon Monoxide burns in air to form carbon dioxide and release heat.

95437. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

95438. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95439. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.

95440. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
95441. Lead reacts with oxygen in air to form lead(II) oxide.
95442. Sulfur reacts with oxygen to form sulfur dioxide.
95443. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
95444. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
95445. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
95446. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
95447. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
95448. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
95449. Nitrogen combines with hydrogen to form ammonia.
95450. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
95451. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
95452. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95453. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
95454. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
95455. Magnesium reacts with oxygen in air to form magnesium oxide.
95456. Phosphorus reacts with oxygen to form phosphorus pentoxide.
95457. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
95458. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
95459. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
95460. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
95461. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
95462. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
95463. Sulfur combines with oxygen to form sulfur dioxide.
95464. Hydrogen burns in air to form water vapor and release heat.
95465. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
95466. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95467. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
95468. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
95469. Calcium reacts with oxygen in air to form calcium oxide.
95470. Hydrogen reacts with oxygen to form water.
95471. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
95472. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
95473. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
95474. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
95475. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
95476. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
95477. Carbon combines with oxygen to form carbon dioxide.
95478. Methane burns in air to form carbon dioxide and water vapor and release heat.
95479. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
95480. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95481. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
95482. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
95483. Aluminium reacts with oxygen in air to form aluminium oxide.
95484. Nitrogen reacts with oxygen to form nitrogen oxides.
95485. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
95486. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
95487. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
95488. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
95489. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
95490. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
95491. Phosphorus combines with oxygen to form phosphorus pentoxide.
95492. Ethane burns in air to form carbon dioxide and water vapor and release heat.
95493. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
95494. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95495. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
95496. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
95497. Zinc reacts with oxygen in air to form zinc oxide.
95498. Silicon reacts with oxygen to form silicon dioxide.
95499. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
95500. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
95501. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
95502. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
95503. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
95504. On heating, hydrogen peroxide decomposes to form water and oxygen.
95505. Magnesium combines with oxygen to form magnesium oxide.
95506. Propane burns in air to form carbon dioxide and water vapor and release heat.
95507. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
95508. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95509. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
95510. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
95511. Iron reacts with oxygen in air to form iron(III) oxide.
95512. Carbon reacts with oxygen to form carbon dioxide.
95513. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
95514. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
95515. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
95516. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
95517. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
95518. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
95519. Iron combines with sulfur to form iron sulfide.
95520. Butane burns in air to form carbon dioxide and water vapor and release heat.
95521. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
95522. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95523. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
95524. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
95525. Copper reacts with oxygen in air to form copper(II) oxide.
95526. Sulfur reacts with oxygen to form sulfur dioxide.
95527. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
95528. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
95529. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
95530. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
95531. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

95532. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

95533. Calcium Oxide combines with water to form calcium hydroxide.

95534. Carbon Monoxide burns in air to form carbon dioxide and release heat.

95535. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

95536. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95537. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

95538. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

95539. Lead reacts with oxygen in air to form lead(II) oxide.

95540. Phosphorus reacts with oxygen to form phosphorus pentoxide.

95541. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

95542. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

95543. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

95544. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

95545. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

95546. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

95547. Hydrogen combines with oxygen to form water.

95548. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

95549. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

95550. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95551. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

95552. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

95553. Magnesium reacts with oxygen in air to form magnesium oxide.

95554. Hydrogen reacts with oxygen to form water.

95555. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

95556. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

95557. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

95558. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

95559. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

95560. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

95561. Nitrogen combines with hydrogen to form ammonia.

95562. Hydrogen burns in air to form water vapor and release heat.

95563. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

95564. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95565. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

95566. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

95567. Calcium reacts with oxygen in air to form calcium oxide.

95568. Nitrogen reacts with oxygen to form nitrogen oxides.

95569. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

95570. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

95571. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

95572. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

95573. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

95574. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

95575. Sulfur combines with oxygen to form sulfur dioxide.

95576. Methane burns in air to form carbon dioxide and water vapor and release heat.

95577. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

95578. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95579. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.

95580. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

95581. Aluminium reacts with oxygen in air to form aluminium oxide.

95582. Silicon reacts with oxygen to form silicon dioxide.

95583. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

95584. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

95585. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

95586. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

95587. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

95588. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

95589. Carbon combines with oxygen to form carbon dioxide.

95590. Ethane burns in air to form carbon dioxide and water vapor and release heat.

95591. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

95592. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95593. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.

95594. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

95595. Zinc reacts with oxygen in air to form zinc oxide.

95596. Carbon reacts with oxygen to form carbon dioxide.

95597. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

95598. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

95599. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

95600. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

95601. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

95602. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

95603. Phosphorus combines with oxygen to form phosphorus pentoxide.

95604. Propane burns in air to form carbon dioxide and water vapor and release heat.

95605. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

95606. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95607. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

95608. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

95609. Iron reacts with oxygen in air to form iron(III) oxide.

95610. Sulfur reacts with oxygen to form sulfur dioxide.

95611. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

95612. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

95613. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

95614. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

95615. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

95616. On heating, hydrogen peroxide decomposes to form water and oxygen.

95617. Magnesium combines with oxygen to form magnesium oxide.

95618. Butane burns in air to form carbon dioxide and water vapor and release heat.

95619. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

95620. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95621. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

95622. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

95623. Copper reacts with oxygen in air to form copper(II) oxide.

95624. Phosphorus reacts with oxygen to form phosphorus pentoxide.

95625. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

95626. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

95627. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

95628. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

95629. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

95630. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

95631. Iron combines with sulfur to form iron sulfide.

95632. Carbon Monoxide burns in air to form carbon dioxide and release heat.

95633. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

95634. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95635. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

95636. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

95637. Lead reacts with oxygen in air to form lead(II) oxide.

95638. Hydrogen reacts with oxygen to form water.

95639. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

95640. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

95641. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

95642. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

95643. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

95644. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

95645. Calcium Oxide combines with water to form calcium hydroxide.

95646. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

95647. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

95648. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95649. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

95650. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

95651. Magnesium reacts with oxygen in air to form magnesium oxide.

95652. Nitrogen reacts with oxygen to form nitrogen oxides.

95653. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

95654. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

95655. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

95656. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

95657. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

95658. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

95659. Hydrogen combines with oxygen to form water.

95660. Hydrogen burns in air to form water vapor and release heat.

95661. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

95662. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95663. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

95664. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

95665. Calcium reacts with oxygen in air to form calcium oxide.

95666. Silicon reacts with oxygen to form silicon dioxide.

95667. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

95668. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

95669. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

95670. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

95671. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

95672. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

95673. Nitrogen combines with hydrogen to form ammonia.

95674. Methane burns in air to form carbon dioxide and water vapor and release heat.

95675. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

95676. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95677. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

95678. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

95679. Aluminium reacts with oxygen in air to form aluminium oxide.

95680. Carbon reacts with oxygen to form carbon dioxide.

95681. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

95682. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

95683. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

95684. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

95685. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

95686. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

95687. Sulfur combines with oxygen to form sulfur dioxide.

95688. Ethane burns in air to form carbon dioxide and water vapor and release heat.

95689. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

95690. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95691. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

95692. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

95693. Zinc reacts with oxygen in air to form zinc oxide.

95694. Sulfur reacts with oxygen to form sulfur dioxide.

95695. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

95696. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

95697. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

95698. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

95699. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

95700. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

95701. Carbon combines with oxygen to form carbon dioxide.

95702. Propane burns in air to form carbon dioxide and water vapor and release heat.

95703. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

95704. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95705. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

95706. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

95707. Iron reacts with oxygen in air to form iron(III) oxide.

95708. Phosphorus reacts with oxygen to form phosphorus pentoxide.

95709. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

95710. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

95711. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

95712. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

95713. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

95714. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

95715. Phosphorus combines with oxygen to form phosphorus pentoxide.

95716. Butane burns in air to form carbon dioxide and water vapor and release heat.
95717. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
95718. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95719. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
95720. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
95721. Copper reacts with oxygen in air to form copper(II) oxide.
95722. Hydrogen reacts with oxygen to form water.
95723. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
95724. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
95725. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
95726. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
95727. Iron(II) Chloride reacts with ammonium hydroxide to form iron(II) hydroxide precipitate and ammonium chloride.
95728. On heating, hydrogen peroxide decomposes to form water and oxygen.
95729. Magnesium combines with oxygen to form magnesium oxide.
95730. Carbon Monoxide burns in air to form carbon dioxide and release heat.
95731. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
95732. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95733. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
95734. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
95735. Lead reacts with oxygen in air to form lead(II) oxide.
95736. Nitrogen reacts with oxygen to form nitrogen oxides.
95737. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
95738. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
95739. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
95740. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
95741. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
95742. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
95743. Iron combines with sulfur to form iron sulfide.
95744. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
95745. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
95746. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95747. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
95748. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
95749. Magnesium reacts with oxygen in air to form magnesium oxide.
95750. Silicon reacts with oxygen to form silicon dioxide.
95751. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
95752. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
95753. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
95754. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
95755. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
95756. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
95757. Calcium Oxide combines with water to form calcium hydroxide.
95758. Hydrogen burns in air to form water vapor and release heat.
95759. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
95760. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95761. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
95762. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
95763. Calcium reacts with oxygen in air to form calcium oxide.
95764. Carbon reacts with oxygen to form carbon dioxide.
95765. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
95766. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
95767. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
95768. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
95769. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
95770. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
95771. Hydrogen combines with oxygen to form water.
95772. Methane burns in air to form carbon dioxide and water vapor and release heat.
95773. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
95774. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95775. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
95776. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
95777. Aluminium reacts with oxygen in air to form aluminium oxide.
95778. Sulfur reacts with oxygen to form sulfur dioxide.
95779. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
95780. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
95781. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
95782. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
95783. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
95784. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
95785. Nitrogen combines with hydrogen to form ammonia.
95786. Ethane burns in air to form carbon dioxide and water vapor and release heat.
95787. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
95788. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95789. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
95790. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
95791. Zinc reacts with oxygen in air to form zinc oxide.
95792. Phosphorus reacts with oxygen to form phosphorus pentoxide.
95793. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
95794. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
95795. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
95796. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
95797. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
95798. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
95799. Sulfur combines with oxygen to form sulfur dioxide.
95800. Propane burns in air to form carbon dioxide and water vapor and release heat.
95801. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
95802. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
95803. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
95804. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
95805. Iron reacts with oxygen in air to form iron(III) oxide.
95806. Hydrogen reacts with oxygen to form water.
95807. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
95808. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

95809. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

95810. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

95811. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

95812. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

95813. Carbon combines with oxygen to form carbon dioxide.

95814. Butane burns in air to form carbon dioxide and water vapor and release heat.

95815. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

95816. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95817. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.

95818. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

95819. Copper reacts with oxygen in air to form copper(II) oxide.

95820. Nitrogen reacts with oxygen to form nitrogen oxides.

95821. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

95822. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

95823. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

95824. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

95825. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

95826. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

95827. Phosphorus combines with oxygen to form phosphorus pentoxide.

95828. Carbon Monoxide burns in air to form carbon dioxide and release heat.

95829. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

95830. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95831. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.

95832. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

95833. Lead reacts with oxygen in air to form lead(II) oxide.

95834. Silicon reacts with oxygen to form silicon dioxide.

95835. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

95836. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

95837. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

95838. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

95839. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

95840. On heating, hydrogen peroxide decomposes to form water and oxygen.

95841. Magnesium combines with oxygen to form magnesium oxide.

95842. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

95843. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

95844. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95845. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.

95846. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

95847. Magnesium reacts with oxygen in air to form magnesium oxide.

95848. Carbon reacts with oxygen to form carbon dioxide.

95849. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

95850. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

95851. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

95852. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

95853. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

95854. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

95855. Iron combines with sulfur to form iron sulfide.

95856. Hydrogen burns in air to form water vapor and release heat.

95857. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

95858. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95859. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.

95860. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

95861. Calcium reacts with oxygen in air to form calcium oxide.

95862. Sulfur reacts with oxygen to form sulfur dioxide.

95863. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

95864. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

95865. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

95866. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

95867. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

95868. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

95869. Calcium Oxide combines with water to form calcium hydroxide.

95870. Methane burns in air to form carbon dioxide and water vapor and release heat.

95871. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

95872. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95873. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

95874. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

95875. Aluminium reacts with oxygen in air to form aluminium oxide.

95876. Phosphorus reacts with oxygen to form phosphorus pentoxide.

95877. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

95878. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

95879. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

95880. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

95881. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

95882. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

95883. Hydrogen combines with oxygen to form water.

95884. Ethane burns in air to form carbon dioxide and water vapor and release heat.

95885. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

95886. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95887. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

95888. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

95889. Zinc reacts with oxygen in air to form zinc oxide.

95890. Hydrogen reacts with oxygen to form water.

95891. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

95892. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

95893. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

95894. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

95895. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

95896. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

95897. Nitrogen combines with hydrogen to form ammonia.

95898. Propane burns in air to form carbon dioxide and water vapor and release heat.

95899. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

95900. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95901. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

95902. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

95903. Iron reacts with oxygen in air to form iron(III) oxide.

95904. Nitrogen reacts with oxygen to form nitrogen oxides.

95905. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

95906. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

95907. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

95908. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

95909. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

95910. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

95911. Sulfur combines with oxygen to form sulfur dioxide.

95912. Butane burns in air to form carbon dioxide and water vapor and release heat.

95913. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

95914. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95915. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.

95916. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

95917. Copper reacts with oxygen in air to form copper(II) oxide.

95918. Silicon reacts with oxygen to form silicon dioxide.

95919. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

95920. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

95921. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

95922. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

95923. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

95924. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

95925. Carbon combines with oxygen to form carbon dioxide.

95926. Carbon Monoxide burns in air to form carbon dioxide and release heat.

95927. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

95928. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95929. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.

95930. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

95931. Lead reacts with oxygen in air to form lead(II) oxide.

95932. Carbon reacts with oxygen to form carbon dioxide.

95933. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

95934. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

95935. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

95936. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

95937. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

95938. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

95939. Phosphorus combines with oxygen to form phosphorus pentoxide.

95940. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

95941. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

95942. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95943. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

95944. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

95945. Magnesium reacts with oxygen in air to form magnesium oxide.

95946. Sulfur reacts with oxygen to form sulfur dioxide.

95947. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

95948. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

95949. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

95950. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

95951. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

95952. On heating, hydrogen peroxide decomposes to form water and oxygen.

95953. Magnesium combines with oxygen to form magnesium oxide.

95954. Hydrogen burns in air to form water vapor and release heat.

95955. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

95956. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95957. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

95958. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

95959. Calcium reacts with oxygen in air to form calcium oxide.

95960. Phosphorus reacts with oxygen to form phosphorus pentoxide.

95961. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

95962. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

95963. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

95964. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

95965. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

95966. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

95967. Iron combines with sulfur to form iron sulfide.

95968. Methane burns in air to form carbon dioxide and water vapor and release heat.

95969. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

95970. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95971. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

95972. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

95973. Aluminium reacts with oxygen in air to form aluminium oxide.

95974. Hydrogen reacts with oxygen to form water.

95975. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

95976. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

95977. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

95978. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

95979. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

95980. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

95981. Calcium Oxide combines with water to form calcium hydroxide.

95982. Ethane burns in air to form carbon dioxide and water vapor and release heat.

95983. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

95984. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95985. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

95986. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

95987. Zinc reacts with oxygen in air to form zinc oxide.

95988. Nitrogen reacts with oxygen to form nitrogen oxides.

95989. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

95990. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

95991. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

95992. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

95993. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

95994. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

95995. Hydrogen combines with oxygen to form water.

95996. Propane burns in air to form carbon dioxide and water vapor and release heat.

95997. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

95998. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

95999. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

96000. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

96001. Iron reacts with oxygen in air to form iron(III) oxide.

96002. Silicon reacts with oxygen to form silicon dioxide.

96003. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

96004. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

96005. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

96006. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

96007. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

96008. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

96009. Nitrogen combines with hydrogen to form ammonia.

96010. Butane burns in air to form carbon dioxide and water vapor and release heat.

96011. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

96012. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96013. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

96014. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

96015. Copper reacts with oxygen in air to form copper(II) oxide.

96016. Carbon reacts with oxygen to form carbon dioxide.

96017. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

96018. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

96019. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

96020. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

96021. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

96022. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

96023. Sulfur combines with oxygen to form sulfur dioxide.

96024. Carbon Monoxide burns in air to form carbon dioxide and release heat.

96025. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

96026. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96027. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

96028. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

96029. Lead reacts with oxygen in air to form lead(II) oxide.

96030. Sulfur reacts with oxygen to form sulfur dioxide.

96031. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

96032. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

96033. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

96034. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

96035. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

96036. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

96037. Carbon combines with oxygen to form carbon dioxide.

96038. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

96039. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

96040. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96041. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

96042. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

96043. Magnesium reacts with oxygen in air to form magnesium oxide.

96044. Phosphorus reacts with oxygen to form phosphorus pentoxide.

96045. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

96046. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

96047. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

96048. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

96049. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

96050. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

96051. Phosphorus combines with oxygen to form phosphorus pentoxide.

96052. Hydrogen burns in air to form water vapor and release heat.

96053. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

96054. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96055. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

96056. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

96057. Calcium reacts with oxygen in air to form calcium oxide.

96058. Hydrogen reacts with oxygen to form water.

96059. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

96060. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

96061. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

96062. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

96063. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

96064. On heating, hydrogen peroxide decomposes to form water and oxygen.

96065. Magnesium combines with oxygen to form magnesium oxide.

96066. Methane burns in air to form carbon dioxide and water vapor and release heat.

96067. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

96068. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96069. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

96070. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

96071. Aluminium reacts with oxygen in air to form aluminium oxide.

96072. Nitrogen reacts with oxygen to form nitrogen oxides.

96073. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

96074. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

96075. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

96076. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

96077. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

96078. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

96079. Iron combines with sulfur to form iron sulfide.

96080. Ethane burns in air to form carbon dioxide and water vapor and release heat.

96081. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

96082. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96083. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

96084. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

96085. Zinc reacts with oxygen in air to form zinc oxide.

96086. Silicon reacts with oxygen to form silicon dioxide.

96087. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

96088. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

96089. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

96090. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

96091. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

96092. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

96093. Calcium Oxide combines with water to form calcium hydroxide.

96094. Propane burns in air to form carbon dioxide and water vapor and release heat.

96095. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

96096. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96097. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.

96098. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

96099. Iron reacts with oxygen in air to form iron(III) oxide.

96100. Carbon reacts with oxygen to form carbon dioxide.

96101. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

96102. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

96103. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

96104. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

96105. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

96106. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

96107. Hydrogen combines with oxygen to form water.

96108. Butane burns in air to form carbon dioxide and water vapor and release heat.

96109. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

96110. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96111. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.

96112. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

96113. Copper reacts with oxygen in air to form copper(II) oxide.

96114. Sulfur reacts with oxygen to form sulfur dioxide.

96115. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

96116. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

96117. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

96118. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

96119. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

96120. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

96121. Nitrogen combines with hydrogen to form ammonia.

96122. Carbon Monoxide burns in air to form carbon dioxide and release heat.

96123. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

96124. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96125. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.

96126. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

96127. Lead reacts with oxygen in air to form lead(II) oxide.

96128. Phosphorus reacts with oxygen to form phosphorus pentoxide.

96129. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

96130. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

96131. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

96132. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

96133. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

96134. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

96135. Sulfur combines with oxygen to form sulfur dioxide.

96136. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

96137. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

96138. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96139. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.

96140. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

96141. Magnesium reacts with oxygen in air to form magnesium oxide.

96142. Hydrogen reacts with oxygen to form water.

96143. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

96144. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

96145. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

96146. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

96147. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

96148. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

96149. Carbon combines with oxygen to form carbon dioxide.

96150. Hydrogen burns in air to form water vapor and release heat.

96151. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

96152. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96153. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.

96154. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

96155. Calcium reacts with oxygen in air to form calcium oxide.

96156. Nitrogen reacts with oxygen to form nitrogen oxides.

96157. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

96158. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

96159. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

96160. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

96161. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

96162. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

96163. Phosphorus combines with oxygen to form phosphorus pentoxide.

96164. Methane burns in air to form carbon dioxide and water vapor and release heat.

96165. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

96166. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96167. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.

96168. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

96169. Aluminium reacts with oxygen in air to form aluminium oxide.

96170. Silicon reacts with oxygen to form silicon dioxide.

96171. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

96172. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

96173. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

96174. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

96175. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

96176. On heating, hydrogen peroxide decomposes to form water and oxygen.

96177. Magnesium combines with oxygen to form magnesium oxide.

96178. Ethane burns in air to form carbon dioxide and water vapor and release heat.
96179. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
96180. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96181. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
96182. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
96183. Zinc reacts with oxygen in air to form zinc oxide.
96184. Carbon reacts with oxygen to form carbon dioxide.
96185. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
96186. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
96187. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
96188. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
96189. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
96190. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
96191. Iron combines with sulfur to form iron sulfide.
96192. Propane burns in air to form carbon dioxide and water vapor and release heat.
96193. Copper(I) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
96194. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96195. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
96196. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
96197. Iron reacts with oxygen in air to form iron(III) oxide.
96198. Sulfur reacts with oxygen to form sulfur dioxide.
96199. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
96200. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
96201. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
96202. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
96203. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
96204. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
96205. Calcium Oxide combines with water to form calcium hydroxide.
96206. Butane burns in air to form carbon dioxide and water vapor and release heat.
96207. Copper(I) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
96208. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96209. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
96210. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
96211. Copper reacts with oxygen in air to form copper(II) oxide.
96212. Phosphorus reacts with oxygen to form phosphorus pentoxide.
96213. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
96214. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
96215. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
96216. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
96217. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
96218. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
96219. Hydrogen combines with oxygen to form water.
96220. Carbon Monoxide burns in air to form carbon dioxide and release heat.
96221. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
96222. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96223. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
96224. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
96225. Lead reacts with oxygen in air to form lead(II) oxide.
96226. Hydrogen reacts with oxygen to form water.
96227. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
96228. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
96229. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
96230. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
96231. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
96232. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
96233. Nitrogen combines with hydrogen to form ammonia.
96234. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
96235. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
96236. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96237. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
96238. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
96239. Magnesium reacts with oxygen in air to form magnesium oxide.
96240. Nitrogen reacts with oxygen to form nitrogen oxides.
96241. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
96242. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
96243. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
96244. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
96245. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
96246. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
96247. Sulfur combines with oxygen to form sulfur dioxide.
96248. Hydrogen burns in air to form water vapor and release heat.
96249. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
96250. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96251. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
96252. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
96253. Calcium reacts with oxygen in air to form calcium oxide.
96254. Silicon reacts with oxygen to form silicon dioxide.
96255. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
96256. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
96257. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
96258. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
96259. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
96260. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
96261. Carbon combines with oxygen to form carbon dioxide.
96262. Methane burns in air to form carbon dioxide and water vapor and release heat.
96263. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
96264. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96265. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
96266. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
96267. Aluminium reacts with oxygen in air to form aluminium oxide.
96268. Carbon reacts with oxygen to form carbon dioxide.
96269. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
96270. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

96271. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

96272. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

96273. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

96274. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

96275. Phosphorus combines with oxygen to form phosphorus pentoxide.

96276. Ethane burns in air to form carbon dioxide and water vapor and release heat.

96277. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

96278. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96279. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

96280. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

96281. Zinc reacts with oxygen in air to form zinc oxide.

96282. Sulfur reacts with oxygen to form sulfur dioxide.

96283. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

96284. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

96285. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

96286. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

96287. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

96288. On heating, hydrogen peroxide decomposes to form water and oxygen.

96289. Magnesium combines with oxygen to form magnesium oxide.

96290. Propane burns in air to form carbon dioxide and water vapor and release heat.

96291. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

96292. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96293. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

96294. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

96295. Iron reacts with oxygen in air to form iron(III) oxide.

96296. Phosphorus reacts with oxygen to form phosphorus pentoxide.

96297. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

96298. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

96299. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

96300. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

96301. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

96302. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

96303. Iron combines with sulfur to form iron sulfide.

96304. Butane burns in air to form carbon dioxide and water vapor and release heat.

96305. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

96306. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96307. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

96308. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

96309. Copper reacts with oxygen in air to form copper(II) oxide.

96310. Hydrogen reacts with oxygen to form water.

96311. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

96312. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

96313. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

96314. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

96315. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

96316. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

96317. Calcium Oxide combines with water to form calcium hydroxide.

96318. Carbon Monoxide burns in air to form carbon dioxide and release heat.

96319. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

96320. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96321. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

96322. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

96323. Lead reacts with oxygen in air to form lead(II) oxide.

96324. Nitrogen reacts with oxygen to form nitrogen oxides.

96325. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

96326. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

96327. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

96328. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

96329. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

96330. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

96331. Hydrogen combines with oxygen to form water.

96332. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

96333. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

96334. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96335. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

96336. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

96337. Magnesium reacts with oxygen in air to form magnesium oxide.

96338. Silicon reacts with oxygen to form silicon dioxide.

96339. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

96340. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

96341. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

96342. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

96343. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

96344. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

96345. Nitrogen combines with hydrogen to form ammonia.

96346. Hydrogen burns in air to form water vapor and release heat.

96347. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

96348. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96349. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

96350. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

96351. Calcium reacts with oxygen in air to form calcium oxide.

96352. Carbon reacts with oxygen to form carbon dioxide.

96353. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

96354. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

96355. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

96356. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

96357. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

96358. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

96359. Sulfur combines with oxygen to form sulfur dioxide.

96360. Methane burns in air to form carbon dioxide and water vapor and release heat.

96361. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

96362. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96363. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

96364. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

96365. Aluminium reacts with oxygen in air to form aluminium oxide.

96366. Sulfur reacts with oxygen to form sulfur dioxide.

96367. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

96368. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

96369. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

96370. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

96371. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

96372. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

96373. Carbon combines with oxygen to form carbon dioxide.

96374. Ethane burns in air to form carbon dioxide and water vapor and release heat.

96375. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

96376. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96377. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

96378. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

96379. Zinc reacts with oxygen in air to form zinc oxide.

96380. Phosphorus reacts with oxygen to form phosphorus pentoxide.

96381. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

96382. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

96383. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

96384. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

96385. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

96386. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

96387. Phosphorus combines with oxygen to form phosphorus pentoxide.

96388. Propane burns in air to form carbon dioxide and water vapor and release heat.

96389. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

96390. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96391. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

96392. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

96393. Iron reacts with oxygen in air to form iron(III) oxide.

96394. Hydrogen reacts with oxygen to form water.

96395. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

96396. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

96397. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

96398. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

96399. Iron(II) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

96400. On heating, hydrogen peroxide decomposes to form water and oxygen.

96401. Magnesium combines with oxygen to form magnesium oxide.

96402. Butane burns in air to form carbon dioxide and water vapor and release heat.

96403. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

96404. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96405. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

96406. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

96407. Copper reacts with oxygen in air to form copper(II) oxide.

96408. Nitrogen reacts with oxygen to form nitrogen oxides.

96409. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

96410. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

96411. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

96412. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

96413. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

96414. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

96415. Iron combines with sulfur to form iron sulfide.

96416. Carbon Monoxide burns in air to form carbon dioxide and release heat.

96417. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

96418. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96419. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

96420. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

96421. Lead reacts with oxygen in air to form lead(II) oxide.

96422. Silicon reacts with oxygen to form silicon dioxide.

96423. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

96424. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

96425. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

96426. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

96427. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

96428. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

96429. Calcium Oxide combines with water to form calcium hydroxide.

96430. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

96431. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

96432. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96433. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.

96434. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

96435. Magnesium reacts with oxygen in air to form magnesium oxide.

96436. Carbon reacts with oxygen to form carbon dioxide.

96437. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

96438. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

96439. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

96440. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

96441. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

96442. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

96443. Hydrogen combines with oxygen to form water.

96444. Hydrogen burns in air to form water vapor and release heat.

96445. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

96446. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96447. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.

96448. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

96449. Calcium reacts with oxygen in air to form calcium oxide.

96450. Sulfur reacts with oxygen to form sulfur dioxide.

96451. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

96452. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

96453. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

96454. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

96455. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

96456. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

96457. Nitrogen combines with hydrogen to form ammonia.

96458. Methane burns in air to form carbon dioxide and water vapor and release heat.
96459. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
96460. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96461. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
96462. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
96463. Aluminium reacts with oxygen in air to form aluminium oxide.
96464. Phosphorus reacts with oxygen to form phosphorus pentoxide.
96465. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
96466. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
96467. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
96468. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
96469. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
96470. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
96471. Sulfur combines with oxygen to form sulfur dioxide.
96472. Ethane burns in air to form carbon dioxide and water vapor and release heat.
96473. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
96474. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96475. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
96476. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
96477. Zinc reacts with oxygen in air to form zinc oxide.
96478. Hydrogen reacts with oxygen to form water.
96479. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
96480. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
96481. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
96482. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
96483. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
96484. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
96485. Carbon combines with oxygen to form carbon dioxide.
96486. Propane burns in air to form carbon dioxide and water vapor and release heat.
96487. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
96488. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96489. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
96490. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
96491. Iron reacts with oxygen in air to form iron(III) oxide.
96492. Nitrogen reacts with oxygen to form nitrogen oxides.
96493. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
96494. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
96495. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
96496. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
96497. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
96498. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
96499. Phosphorus combines with oxygen to form phosphorus pentoxide.
96500. Butane burns in air to form carbon dioxide and water vapor and release heat.
96501. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
96502. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96503. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
96504. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
96505. Copper reacts with oxygen in air to form copper(II) oxide.
96506. Silicon reacts with oxygen to form silicon dioxide.
96507. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
96508. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
96509. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
96510. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
96511. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
96512. On heating, hydrogen peroxide decomposes to form water and oxygen.
96513. Magnesium combines with oxygen to form magnesium oxide.
96514. Carbon Monoxide burns in air to form carbon dioxide and release heat.
96515. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
96516. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96517. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
96518. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
96519. Lead reacts with oxygen in air to form lead(II) oxide.
96520. Carbon reacts with oxygen to form carbon dioxide.
96521. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
96522. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
96523. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
96524. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
96525. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
96526. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
96527. Iron combines with sulfur to form iron sulfide.
96528. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
96529. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
96530. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96531. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
96532. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
96533. Magnesium reacts with oxygen in air to form magnesium oxide.
96534. Sulfur reacts with oxygen to form sulfur dioxide.
96535. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
96536. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
96537. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
96538. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
96539. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
96540. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
96541. Calcium Oxide combines with water to form calcium hydroxide.
96542. Hydrogen burns in air to form water vapor and release heat.
96543. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
96544. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96545. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
96546. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
96547. Calcium reacts with oxygen in air to form calcium oxide.
96548. Phosphorus reacts with oxygen to form phosphorus pentoxide.
96549. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

96550. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

96551. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

96552. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

96553. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

96554. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

96555. Hydrogen combines with oxygen to form water.

96556. Methane burns in air to form carbon dioxide and water vapor and release heat.

96557. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

96558. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96559. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

96560. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

96561. Aluminium reacts with oxygen in air to form aluminium oxide.

96562. Hydrogen reacts with oxygen to form water.

96563. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

96564. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

96565. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

96566. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

96567. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

96568. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

96569. Nitrogen combines with hydrogen to form ammonia.

96570. Ethane burns in air to form carbon dioxide and water vapor and release heat.

96571. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

96572. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96573. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

96574. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

96575. Zinc reacts with oxygen in air to form zinc oxide.

96576. Nitrogen reacts with oxygen to form nitrogen oxides.

96577. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

96578. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

96579. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

96580. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

96581. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

96582. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

96583. Sulfur combines with oxygen to form sulfur dioxide.

96584. Propane burns in air to form carbon dioxide and water vapor and release heat.

96585. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

96586. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96587. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.

96588. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

96589. Iron reacts with oxygen in air to form iron(III) oxide.

96590. Silicon reacts with oxygen to form silicon dioxide.

96591. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

96592. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

96593. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

96594. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

96595. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

96596. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

96597. Carbon combines with oxygen to form carbon dioxide.

96598. Butane burns in air to form carbon dioxide and water vapor and release heat.

96599. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

96600. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96601. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.

96602. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

96603. Copper reacts with oxygen in air to form copper(II) oxide.

96604. Carbon reacts with oxygen to form carbon dioxide.

96605. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

96606. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

96607. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

96608. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

96609. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

96610. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

96611. Phosphorus combines with oxygen to form phosphorus pentoxide.

96612. Carbon Monoxide burns in air to form carbon dioxide and release heat.

96613. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

96614. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96615. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

96616. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

96617. Lead reacts with oxygen in air to form lead(II) oxide.

96618. Sulfur reacts with oxygen to form sulfur dioxide.

96619. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

96620. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

96621. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

96622. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

96623. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

96624. On heating, hydrogen peroxide decomposes to form water and oxygen.

96625. Magnesium combines with oxygen to form magnesium oxide.

96626. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

96627. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

96628. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96629. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

96630. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

96631. Magnesium reacts with oxygen in air to form magnesium oxide.

96632. Phosphorus reacts with oxygen to form phosphorus pentoxide.

96633. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

96634. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

96635. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

96636. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

96637. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

96638. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

96639. Iron combines with sulfur to form iron sulfide.

96640. Hydrogen burns in air to form water vapor and release heat.

96641. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

96642. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96643. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
96644. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
96645. Calcium reacts with oxygen in air to form calcium oxide.
96646. Hydrogen reacts with oxygen to form water.
96647. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
96648. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
96649. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
96650. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
96651. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
96652. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
96653. Calcium Oxide combines with water to form calcium hydroxide.
96654. Methane burns in air to form carbon dioxide and water vapor and release heat.
96655. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
96656. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96657. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
96658. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
96659. Aluminium reacts with oxygen in air to form aluminium oxide.
96660. Nitrogen reacts with oxygen to form nitrogen oxides.
96661. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
96662. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
96663. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
96664. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
96665. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
96666. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
96667. Hydrogen combines with oxygen to form water.
96668. Ethane burns in air to form carbon dioxide and water vapor and release heat.
96669. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
96670. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96671. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
96672. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
96673. Zinc reacts with oxygen in air to form zinc oxide.
96674. Silicon reacts with oxygen to form silicon dioxide.
96675. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
96676. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
96677. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
96678. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
96679. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
96680. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
96681. Nitrogen combines with hydrogen to form ammonia.
96682. Propane burns in air to form carbon dioxide and water vapor and release heat.
96683. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
96684. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96685. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
96686. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
96687. Iron reacts with oxygen in air to form iron(III) oxide.
96688. Carbon reacts with oxygen to form carbon dioxide.
96689. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
96690. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
96691. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
96692. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
96693. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
96694. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
96695. Sulfur combines with oxygen to form sulfur dioxide.
96696. Butane burns in air to form carbon dioxide and water vapor and release heat.
96697. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
96698. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96699. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
96700. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
96701. Copper reacts with oxygen in air to form copper(II) oxide.
96702. Sulfur reacts with oxygen to form sulfur dioxide.
96703. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
96704. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
96705. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
96706. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
96707. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
96708. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
96709. Carbon combines with oxygen to form carbon dioxide.
96710. Carbon Monoxide burns in air to form carbon dioxide and release heat.
96711. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
96712. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96713. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
96714. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
96715. Lead reacts with oxygen in air to form lead(II) oxide.
96716. Phosphorus reacts with oxygen to form phosphorus pentoxide.
96717. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
96718. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
96719. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
96720. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
96721. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
96722. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
96723. Phosphorus combines with oxygen to form phosphorus pentoxide.
96724. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
96725. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
96726. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96727. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
96728. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
96729. Magnesium reacts with oxygen in air to form magnesium oxide.
96730. Hydrogen reacts with oxygen to form water.
96731. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
96732. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
96733. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
96734. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

96735. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

96736. On heating, hydrogen peroxide decomposes to form water and oxygen.

96737. Magnesium combines with oxygen to form magnesium oxide.

96738. Hydrogen burns in air to form water vapor and release heat.

96739. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

96740. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96741. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

96742. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

96743. Calcium reacts with oxygen in air to form calcium oxide.

96744. Nitrogen reacts with oxygen to form nitrogen oxides.

96745. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

96746. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

96747. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

96748. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

96749. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

96750. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

96751. Iron combines with sulfur to form iron sulfide.

96752. Methane burns in air to form carbon dioxide and water vapor and release heat.

96753. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

96754. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96755. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

96756. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

96757. Aluminium reacts with oxygen in air to form aluminium oxide.

96758. Silicon reacts with oxygen to form silicon dioxide.

96759. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

96760. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

96761. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

96762. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

96763. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

96764. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

96765. Calcium Oxide combines with water to form calcium hydroxide.

96766. Ethane burns in air to form carbon dioxide and water vapor and release heat.

96767. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

96768. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96769. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.

96770. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

96771. Zinc reacts with oxygen in air to form zinc oxide.

96772. Carbon reacts with oxygen to form carbon dioxide.

96773. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

96774. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

96775. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

96776. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

96777. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

96778. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

96779. Hydrogen combines with oxygen to form water.

96780. Propane burns in air to form carbon dioxide and water vapor and release heat.

96781. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

96782. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96783. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.

96784. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

96785. Iron reacts with oxygen in air to form iron(III) oxide.

96786. Sulfur reacts with oxygen to form sulfur dioxide.

96787. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

96788. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

96789. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

96790. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

96791. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

96792. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

96793. Nitrogen combines with hydrogen to form ammonia.

96794. Butane burns in air to form carbon dioxide and water vapor and release heat.

96795. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

96796. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96797. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.

96798. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

96799. Copper reacts with oxygen in air to form copper(II) oxide.

96800. Phosphorus reacts with oxygen to form phosphorus pentoxide.

96801. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

96802. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

96803. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

96804. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

96805. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

96806. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

96807. Sulfur combines with oxygen to form sulfur dioxide.

96808. Carbon Monoxide burns in air to form carbon dioxide and release heat.

96809. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

96810. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96811. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.

96812. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

96813. Lead reacts with oxygen in air to form lead(II) oxide.

96814. Hydrogen reacts with oxygen to form water.

96815. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

96816. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

96817. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

96818. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

96819. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

96820. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

96821. Carbon combines with oxygen to form carbon dioxide.

96822. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

96823. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

96824. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

96825. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.

96826. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

96827. Magnesium reacts with oxygen in air to form magnesium oxide.
96828. Nitrogen reacts with oxygen to form nitrogen oxides.
96829. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
96830. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
96831. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
96832. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
96833. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
96834. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
96835. Phosphorus combines with oxygen to form phosphorus pentoxide.
96836. Hydrogen burns in air to form water vapor and release heat.
96837. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
96838. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96839. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
96840. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
96841. Calcium reacts with oxygen in air to form calcium oxide.
96842. Silicon reacts with oxygen to form silicon dioxide.
96843. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
96844. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
96845. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
96846. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
96847. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
96848. On heating, hydrogen peroxide decomposes to form water and oxygen.
96849. Magnesium combines with oxygen to form magnesium oxide.
96850. Methane burns in air to form carbon dioxide and water vapor and release heat.
96851. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
96852. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96853. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
96854. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
96855. Aluminium reacts with oxygen in air to form aluminium oxide.
96856. Carbon reacts with oxygen to form carbon dioxide.
96857. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
96858. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
96859. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
96860. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
96861. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
96862. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
96863. Iron combines with sulfur to form iron sulfide.
96864. Ethane burns in air to form carbon dioxide and water vapor and release heat.
96865. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
96866. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96867. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
96868. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
96869. Zinc reacts with oxygen in air to form zinc oxide.
96870. Sulfur reacts with oxygen to form sulfur dioxide.
96871. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
96872. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
96873. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
96874. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
96875. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
96876. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
96877. Calcium Oxide combines with water to form calcium hydroxide.
96878. Propane burns in air to form carbon dioxide and water vapor and release heat.
96879. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
96880. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96881. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
96882. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
96883. Iron reacts with oxygen in air to form iron(III) oxide.
96884. Phosphorus reacts with oxygen to form phosphorus pentoxide.
96885. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
96886. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
96887. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
96888. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
96889. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
96890. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
96891. Hydrogen combines with oxygen to form water.
96892. Butane burns in air to form carbon dioxide and water vapor and release heat.
96893. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
96894. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96895. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
96896. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
96897. Copper reacts with oxygen in air to form copper(II) oxide.
96898. Hydrogen reacts with oxygen to form water.
96899. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
96900. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
96901. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
96902. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
96903. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
96904. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
96905. Nitrogen combines with hydrogen to form ammonia.
96906. Carbon Monoxide burns in air to form carbon dioxide and release heat.
96907. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
96908. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96909. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
96910. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
96911. Lead reacts with oxygen in air to form lead(II) oxide.
96912. Nitrogen reacts with oxygen to form nitrogen oxides.
96913. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
96914. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
96915. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
96916. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
96917. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
96918. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
96919. Sulfur combines with oxygen to form sulfur dioxide.

96920. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
96921. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
96922. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96923. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
96924. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
96925. Magnesium reacts with oxygen in air to form magnesium oxide.
96926. Silicon reacts with oxygen to form silicon dioxide.
96927. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
96928. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
96929. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
96930. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
96931. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
96932. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
96933. Carbon combines with oxygen to form carbon dioxide.
96934. Hydrogen burns in air to form water vapor and release heat.
96935. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
96936. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96937. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
96938. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
96939. Calcium reacts with oxygen in air to form calcium oxide.
96940. Carbon reacts with oxygen to form carbon dioxide.
96941. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
96942. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
96943. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
96944. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
96945. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
96946. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
96947. Phosphorus combines with oxygen to form phosphorus pentoxide.
96948. Methane burns in air to form carbon dioxide and water vapor and release heat.
96949. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
96950. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96951. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
96952. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
96953. Aluminium reacts with oxygen in air to form aluminium oxide.
96954. Sulfur reacts with oxygen to form sulfur dioxide.
96955. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
96956. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
96957. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
96958. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
96959. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
96960. On heating, hydrogen peroxide decomposes to form water and oxygen.
96961. Magnesium combines with oxygen to form magnesium oxide.
96962. Ethane burns in air to form carbon dioxide and water vapor and release heat.
96963. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
96964. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96965. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
96966. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
96967. Zinc reacts with oxygen in air to form zinc oxide.
96968. Phosphorus reacts with oxygen to form phosphorus pentoxide.
96969. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
96970. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
96971. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
96972. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
96973. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
96974. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
96975. Iron combines with sulfur to form iron sulfide.
96976. Propane burns in air to form carbon dioxide and water vapor and release heat.
96977. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
96978. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96979. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
96980. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
96981. Iron reacts with oxygen in air to form iron(III) oxide.
96982. Hydrogen reacts with oxygen to form water.
96983. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
96984. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
96985. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
96986. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
96987. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
96988. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
96989. Calcium Oxide combines with water to form calcium hydroxide.
96990. Butane burns in air to form carbon dioxide and water vapor and release heat.
96991. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
96992. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
96993. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
96994. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
96995. Copper reacts with oxygen in air to form copper(II) oxide.
96996. Nitrogen reacts with oxygen to form nitrogen oxides.
96997. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
96998. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
96999. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
97000. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
97001. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
97002. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
97003. Hydrogen combines with oxygen to form water.
97004. Carbon Monoxide burns in air to form carbon dioxide and release heat.
97005. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
97006. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97007. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
97008. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
97009. Lead reacts with oxygen in air to form lead(II) oxide.
97010. Silicon reacts with oxygen to form silicon dioxide.
97011. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
97012. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

97013. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

97014. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

97015. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

97016. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

97017. Nitrogen combines with hydrogen to form ammonia.

97018. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

97019. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

97020. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97021. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

97022. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

97023. Magnesium reacts with oxygen in air to form magnesium oxide.

97024. Carbon reacts with oxygen to form carbon dioxide.

97025. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

97026. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

97027. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

97028. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

97029. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

97030. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

97031. Sulfur combines with oxygen to form sulfur dioxide.

97032. Hydrogen burns in air to form water vapor and release heat.

97033. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

97034. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97035. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

97036. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

97037. Calcium reacts with oxygen in air to form calcium oxide.

97038. Sulfur reacts with oxygen to form sulfur dioxide.

97039. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

97040. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

97041. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

97042. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

97043. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

97044. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

97045. Carbon combines with oxygen to form carbon dioxide.

97046. Methane burns in air to form carbon dioxide and water vapor and release heat.

97047. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

97048. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97049. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

97050. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

97051. Aluminium reacts with oxygen in air to form aluminium oxide.

97052. Phosphorus reacts with oxygen to form phosphorus pentoxide.

97053. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

97054. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

97055. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

97056. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

97057. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

97058. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

97059. Phosphorus combines with oxygen to form phosphorus pentoxide.

97060. Ethane burns in air to form carbon dioxide and water vapor and release heat.

97061. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

97062. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97063. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

97064. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

97065. Zinc reacts with oxygen in air to form zinc oxide.

97066. Hydrogen reacts with oxygen to form water.

97067. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

97068. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

97069. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

97070. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

97071. Iron(II) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

97072. On heating, hydrogen peroxide decomposes to form water and oxygen.

97073. Magnesium combines with oxygen to form magnesium oxide.

97074. Propane burns in air to form carbon dioxide and water vapor and release heat.

97075. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

97076. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97077. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

97078. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

97079. Iron reacts with oxygen in air to form iron(III) oxide.

97080. Nitrogen reacts with oxygen to form nitrogen oxides.

97081. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

97082. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

97083. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

97084. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

97085. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

97086. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

97087. Iron combines with sulfur to form iron sulfide.

97088. Butane burns in air to form carbon dioxide and water vapor and release heat.

97089. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

97090. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97091. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

97092. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

97093. Copper reacts with oxygen in air to form copper(II) oxide.

97094. Silicon reacts with oxygen to form silicon dioxide.

97095. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

97096. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

97097. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

97098. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

97099. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

97100. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

97101. Calcium Oxide combines with water to form calcium hydroxide.

97102. Carbon Monoxide burns in air to form carbon dioxide and release heat.

97103. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

97104. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97105. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.

97106. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

97107. Lead reacts with oxygen in air to form lead(II) oxide.
97108. Carbon reacts with oxygen to form carbon dioxide.
97109. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
97110. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
97111. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
97112. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
97113. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
97114. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
97115. Hydrogen combines with oxygen to form water.
97116. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
97117. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
97118. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97119. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
97120. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
97121. Magnesium reacts with oxygen in air to form magnesium oxide.
97122. Sulfur reacts with oxygen to form sulfur dioxide.
97123. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
97124. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
97125. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
97126. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
97127. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
97128. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
97129. Nitrogen combines with hydrogen to form ammonia.
97130. Hydrogen burns in air to form water vapor and release heat.
97131. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
97132. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97133. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
97134. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
97135. Calcium reacts with oxygen in air to form calcium oxide.
97136. Phosphorus reacts with oxygen to form phosphorus pentoxide.
97137. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
97138. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
97139. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
97140. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
97141. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
97142. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
97143. Sulfur combines with oxygen to form sulfur dioxide.
97144. Methane burns in air to form carbon dioxide and water vapor and release heat.
97145. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
97146. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97147. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
97148. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
97149. Aluminium reacts with oxygen in air to form aluminium oxide.
97150. Hydrogen reacts with oxygen to form water.
97151. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
97152. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
97153. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
97154. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
97155. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
97156. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
97157. Carbon combines with oxygen to form carbon dioxide.
97158. Ethane burns in air to form carbon dioxide and water vapor and release heat.
97159. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
97160. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97161. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
97162. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
97163. Zinc reacts with oxygen in air to form zinc oxide.
97164. Nitrogen reacts with oxygen to form nitrogen oxides.
97165. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
97166. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
97167. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
97168. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
97169. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
97170. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
97171. Phosphorus combines with oxygen to form phosphorus pentoxide.
97172. Propane burns in air to form carbon dioxide and water vapor and release heat.
97173. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
97174. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97175. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
97176. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
97177. Iron reacts with oxygen in air to form iron(III) oxide.
97178. Silicon reacts with oxygen to form silicon dioxide.
97179. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
97180. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
97181. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
97182. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
97183. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
97184. On heating, hydrogen peroxide decomposes to form water and oxygen.
97185. Magnesium combines with oxygen to form magnesium oxide.
97186. Butane burns in air to form carbon dioxide and water vapor and release heat.
97187. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
97188. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97189. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
97190. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
97191. Copper reacts with oxygen in air to form copper(II) oxide.
97192. Carbon reacts with oxygen to form carbon dioxide.
97193. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
97194. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
97195. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
97196. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
97197. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

97198. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

97199. Iron combines with sulfur to form iron sulfide.

97200. Carbon Monoxide burns in air to form carbon dioxide and release heat.

97201. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

97202. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97203. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.

97204. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

97205. Lead reacts with oxygen in air to form lead(II) oxide.

97206. Sulfur reacts with oxygen to form sulfur dioxide.

97207. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

97208. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

97209. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

97210. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

97211. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

97212. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

97213. Calcium Oxide combines with water to form calcium hydroxide.

97214. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

97215. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

97216. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97217. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

97218. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

97219. Magnesium reacts with oxygen in air to form magnesium oxide.

97220. Phosphorus reacts with oxygen to form phosphorus pentoxide.

97221. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

97222. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

97223. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

97224. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

97225. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

97226. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

97227. Hydrogen combines with oxygen to form water.

97228. Hydrogen burns in air to form water vapor and release heat.

97229. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

97230. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97231. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

97232. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

97233. Calcium reacts with oxygen in air to form calcium oxide.

97234. Hydrogen reacts with oxygen to form water.

97235. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

97236. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

97237. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

97238. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

97239. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

97240. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

97241. Nitrogen combines with hydrogen to form ammonia.

97242. Methane burns in air to form carbon dioxide and water vapor and release heat.

97243. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

97244. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97245. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

97246. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

97247. Aluminium reacts with oxygen in air to form aluminium oxide.

97248. Nitrogen reacts with oxygen to form nitrogen oxides.

97249. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

97250. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

97251. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

97252. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

97253. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

97254. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

97255. Sulfur combines with oxygen to form sulfur dioxide.

97256. Ethane burns in air to form carbon dioxide and water vapor and release heat.

97257. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

97258. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97259. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.

97260. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

97261. Zinc reacts with oxygen in air to form zinc oxide.

97262. Silicon reacts with oxygen to form silicon dioxide.

97263. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

97264. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

97265. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

97266. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

97267. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

97268. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

97269. Carbon combines with oxygen to form carbon dioxide.

97270. Propane burns in air to form carbon dioxide and water vapor and release heat.

97271. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

97272. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97273. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.

97274. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

97275. Iron reacts with oxygen in air to form iron(III) oxide.

97276. Carbon reacts with oxygen to form carbon dioxide.

97277. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

97278. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

97279. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

97280. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

97281. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

97282. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

97283. Phosphorus combines with oxygen to form phosphorus pentoxide.

97284. Butane burns in air to form carbon dioxide and water vapor and release heat.

97285. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

97286. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97287. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

97288. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

97289. Copper reacts with oxygen in air to form copper(II) oxide.

97290. Sulfur reacts with oxygen to form sulfur dioxide.

97291. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

97292. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

97293. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

97294. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

97295. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

97296. On heating, hydrogen peroxide decomposes to form water and oxygen.

97297. Magnesium combines with oxygen to form magnesium oxide.

97298. Carbon Monoxide burns in air to form carbon dioxide and release heat.

97299. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

97300. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97301. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

97302. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

97303. Lead reacts with oxygen in air to form lead(II) oxide.

97304. Phosphorus reacts with oxygen to form phosphorus pentoxide.

97305. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

97306. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

97307. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

97308. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

97309. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

97310. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

97311. Iron combines with sulfur to form iron sulfide.

97312. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

97313. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

97314. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97315. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

97316. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

97317. Magnesium reacts with oxygen in air to form magnesium oxide.

97318. Hydrogen reacts with oxygen to form water.

97319. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

97320. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

97321. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

97322. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

97323. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

97324. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

97325. Calcium Oxide combines with water to form calcium hydroxide.

97326. Hydrogen burns in air to form water vapor and release heat.

97327. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

97328. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97329. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

97330. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

97331. Calcium reacts with oxygen in air to form calcium oxide.

97332. Nitrogen reacts with oxygen to form nitrogen oxides.

97333. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

97334. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

97335. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

97336. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

97337. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

97338. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

97339. Hydrogen combines with oxygen to form water.

97340. Methane burns in air to form carbon dioxide and water vapor and release heat.

97341. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

97342. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97343. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

97344. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

97345. Aluminium reacts with oxygen in air to form aluminium oxide.

97346. Silicon reacts with oxygen to form silicon dioxide.

97347. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

97348. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

97349. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

97350. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

97351. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

97352. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

97353. Nitrogen combines with hydrogen to form ammonia.

97354. Ethane burns in air to form carbon dioxide and water vapor and release heat.

97355. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

97356. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97357. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

97358. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

97359. Zinc reacts with oxygen in air to form zinc oxide.

97360. Carbon reacts with oxygen to form carbon dioxide.

97361. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

97362. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

97363. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

97364. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

97365. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

97366. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

97367. Sulfur combines with oxygen to form sulfur dioxide.

97368. Propane burns in air to form carbon dioxide and water vapor and release heat.

97369. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

97370. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97371. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

97372. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

97373. Iron reacts with oxygen in air to form iron(III) oxide.

97374. Sulfur reacts with oxygen to form sulfur dioxide.

97375. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

97376. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

97377. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

97378. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

97379. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

97380. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

97381. Carbon combines with oxygen to form carbon dioxide.

97382. Butane burns in air to form carbon dioxide and water vapor and release heat.

97383. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
97384. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97385. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
97386. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
97387. Copper reacts with oxygen in air to form copper(II) oxide.
97388. Phosphorus reacts with oxygen to form phosphorus pentoxide.
97389. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
97390. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
97391. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
97392. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
97393. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
97394. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
97395. Phosphorus combines with oxygen to form phosphorus pentoxide.
97396. Carbon Monoxide burns in air to form carbon dioxide and release heat.
97397. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
97398. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97399. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
97400. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
97401. Lead reacts with oxygen in air to form lead(II) oxide.
97402. Hydrogen reacts with oxygen to form water.
97403. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
97404. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
97405. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
97406. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
97407. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
97408. On heating, hydrogen peroxide decomposes to form water and oxygen.
97409. Magnesium combines with oxygen to form magnesium oxide.
97410. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
97411. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
97412. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97413. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
97414. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
97415. Magnesium reacts with oxygen in air to form magnesium oxide.
97416. Nitrogen reacts with oxygen to form nitrogen oxides.
97417. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
97418. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
97419. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
97420. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
97421. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
97422. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
97423. Iron combines with sulfur to form iron sulfide.
97424. Hydrogen burns in air to form water vapor and release heat.
97425. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
97426. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97427. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
97428. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
97429. Calcium reacts with oxygen in air to form calcium oxide.
97430. Silicon reacts with oxygen to form silicon dioxide.
97431. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
97432. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
97433. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
97434. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
97435. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
97436. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
97437. Calcium Oxide combines with water to form calcium hydroxide.
97438. Methane burns in air to form carbon dioxide and water vapor and release heat.
97439. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
97440. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97441. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
97442. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
97443. Aluminium reacts with oxygen in air to form aluminium oxide.
97444. Carbon reacts with oxygen to form carbon dioxide.
97445. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
97446. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
97447. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
97448. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
97449. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
97450. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
97451. Hydrogen combines with oxygen to form water.
97452. Ethane burns in air to form carbon dioxide and water vapor and release heat.
97453. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
97454. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97455. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
97456. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
97457. Zinc reacts with oxygen in air to form zinc oxide.
97458. Sulfur reacts with oxygen to form sulfur dioxide.
97459. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
97460. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
97461. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
97462. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
97463. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
97464. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
97465. Nitrogen combines with hydrogen to form ammonia.
97466. Propane burns in air to form carbon dioxide and water vapor and release heat.
97467. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
97468. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97469. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
97470. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
97471. Iron reacts with oxygen in air to form iron(III) oxide.
97472. Phosphorus reacts with oxygen to form phosphorus pentoxide.
97473. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
97474. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
97475. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

97476. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
97477. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
97478. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
97479. Sulfur combines with oxygen to form sulfur dioxide.
97480. Butane burns in air to form carbon dioxide and water vapor and release heat.
97481. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
97482. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97483. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
97484. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
97485. Copper reacts with oxygen in air to form copper(II) oxide.
97486. Hydrogen reacts with oxygen to form water.
97487. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
97488. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
97489. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
97490. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
97491. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
97492. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
97493. Carbon combines with oxygen to form carbon dioxide.
97494. Carbon Monoxide burns in air to form carbon dioxide and release heat.
97495. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
97496. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97497. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
97498. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
97499. Lead reacts with oxygen in air to form lead(II) oxide.
97500. Nitrogen reacts with oxygen to form nitrogen oxides.
97501. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
97502. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
97503. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
97504. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
97505. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
97506. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
97507. Phosphorus combines with oxygen to form phosphorus pentoxide.
97508. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
97509. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
97510. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97511. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
97512. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
97513. Magnesium reacts with oxygen in air to form magnesium oxide.
97514. Silicon reacts with oxygen to form silicon dioxide.
97515. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
97516. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
97517. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
97518. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
97519. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
97520. On heating, hydrogen peroxide decomposes to form water and oxygen.
97521. Magnesium combines with oxygen to form magnesium oxide.
97522. Hydrogen burns in air to form water vapor and release heat.
97523. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
97524. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97525. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
97526. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
97527. Calcium reacts with oxygen in air to form calcium oxide.
97528. Carbon reacts with oxygen to form carbon dioxide.
97529. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
97530. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
97531. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
97532. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
97533. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
97534. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
97535. Iron combines with sulfur to form iron sulfide.
97536. Methane burns in air to form carbon dioxide and water vapor and release heat.
97537. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
97538. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97539. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
97540. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
97541. Aluminium reacts with oxygen in air to form aluminium oxide.
97542. Sulfur reacts with oxygen to form sulfur dioxide.
97543. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
97544. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
97545. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
97546. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
97547. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
97548. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
97549. Calcium Oxide combines with water to form calcium hydroxide.
97550. Ethane burns in air to form carbon dioxide and water vapor and release heat.
97551. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
97552. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97553. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
97554. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
97555. Zinc reacts with oxygen in air to form zinc oxide.
97556. Phosphorus reacts with oxygen to form phosphorus pentoxide.
97557. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
97558. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
97559. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
97560. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
97561. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
97562. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
97563. Hydrogen combines with oxygen to form water.
97564. Propane burns in air to form carbon dioxide and water vapor and release heat.
97565. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
97566. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
97567. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

97568. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

97569. Iron reacts with oxygen in air to form iron(III) oxide.

97570. Hydrogen reacts with oxygen to form water.

97571. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

97572. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

97573. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

97574. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

97575. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

97576. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

97577. Nitrogen combines with hydrogen to form ammonia.

97578. Butane burns in air to form carbon dioxide and water vapor and release heat.

97579. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

97580. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97581. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

97582. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

97583. Copper reacts with oxygen in air to form copper(II) oxide.

97584. Nitrogen reacts with oxygen to form nitrogen oxides.

97585. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

97586. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

97587. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

97588. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

97589. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

97590. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

97591. Sulfur combines with oxygen to form sulfur dioxide.

97592. Carbon Monoxide burns in air to form carbon dioxide and release heat.

97593. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

97594. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97595. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.

97596. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

97597. Lead reacts with oxygen in air to form lead(II) oxide.

97598. Silicon reacts with oxygen to form silicon dioxide.

97599. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

97600. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

97601. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

97602. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

97603. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

97604. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

97605. Carbon combines with oxygen to form carbon dioxide.

97606. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

97607. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

97608. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97609. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.

97610. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

97611. Magnesium reacts with oxygen in air to form magnesium oxide.

97612. Carbon reacts with oxygen to form carbon dioxide.

97613. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

97614. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

97615. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

97616. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

97617. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

97618. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

97619. Phosphorus combines with oxygen to form phosphorus pentoxide.

97620. Hydrogen burns in air to form water vapor and release heat.

97621. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

97622. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97623. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

97624. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

97625. Calcium reacts with oxygen in air to form calcium oxide.

97626. Sulfur reacts with oxygen to form sulfur dioxide.

97627. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

97628. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

97629. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

97630. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

97631. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

97632. On heating, hydrogen peroxide decomposes to form water and oxygen.

97633. Magnesium combines with oxygen to form magnesium oxide.

97634. Methane burns in air to form carbon dioxide and water vapor and release heat.

97635. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

97636. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97637. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

97638. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

97639. Aluminium reacts with oxygen in air to form aluminium oxide.

97640. Phosphorus reacts with oxygen to form phosphorus pentoxide.

97641. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

97642. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

97643. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

97644. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

97645. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

97646. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

97647. Iron combines with sulfur to form iron sulfide.

97648. Ethane burns in air to form carbon dioxide and water vapor and release heat.

97649. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

97650. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97651. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

97652. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

97653. Zinc reacts with oxygen in air to form zinc oxide.

97654. Hydrogen reacts with oxygen to form water.

97655. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

97656. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

97657. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

97658. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

97659. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

97660. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

97661. Calcium Oxide combines with water to form calcium hydroxide.

97662. Propane burns in air to form carbon dioxide and water vapor and release heat.

97663. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

97664. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97665. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

97666. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

97667. Iron reacts with oxygen in air to form iron(III) oxide.

97668. Nitrogen reacts with oxygen to form nitrogen oxides.

97669. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

97670. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

97671. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

97672. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

97673. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

97674. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

97675. Hydrogen combines with oxygen to form water.

97676. Butane burns in air to form carbon dioxide and water vapor and release heat.

97677. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

97678. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97679. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

97680. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

97681. Copper reacts with oxygen in air to form copper(II) oxide.

97682. Silicon reacts with oxygen to form silicon dioxide.

97683. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

97684. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

97685. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

97686. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

97687. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

97688. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

97689. Nitrogen combines with hydrogen to form ammonia.

97690. Carbon Monoxide burns in air to form carbon dioxide and release heat.

97691. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

97692. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97693. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

97694. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

97695. Lead reacts with oxygen in air to form lead(II) oxide.

97696. Carbon reacts with oxygen to form carbon dioxide.

97697. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

97698. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

97699. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

97700. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

97701. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

97702. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

97703. Sulfur combines with oxygen to form sulfur dioxide.

97704. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

97705. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

97706. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97707. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

97708. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

97709. Magnesium reacts with oxygen in air to form magnesium oxide.

97710. Sulfur reacts with oxygen to form sulfur dioxide.

97711. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

97712. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

97713. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

97714. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

97715. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

97716. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

97717. Carbon combines with oxygen to form carbon dioxide.

97718. Hydrogen burns in air to form water vapor and release heat.

97719. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

97720. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97721. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

97722. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

97723. Calcium reacts with oxygen in air to form calcium oxide.

97724. Phosphorus reacts with oxygen to form phosphorus pentoxide.

97725. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

97726. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

97727. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

97728. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

97729. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

97730. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

97731. Phosphorus combines with oxygen to form phosphorus pentoxide.

97732. Methane burns in air to form carbon dioxide and water vapor and release heat.

97733. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

97734. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97735. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

97736. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

97737. Aluminium reacts with oxygen in air to form aluminium oxide.

97738. Hydrogen reacts with oxygen to form water.

97739. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

97740. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

97741. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

97742. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

97743. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

97744. On heating, hydrogen peroxide decomposes to form water and oxygen.

97745. Magnesium combines with oxygen to form magnesium oxide.

97746. Ethane burns in air to form carbon dioxide and water vapor and release heat.

97747. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

97748. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97749. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

97750. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

97751. Zinc reacts with oxygen in air to form zinc oxide.

97752. Nitrogen reacts with oxygen to form nitrogen oxides.

97753. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

97754. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

97755. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

97756. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

97757. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

97758. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

97759. Iron combines with sulfur to form iron sulfide.

97760. Propane burns in air to form carbon dioxide and water vapor and release heat.

97761. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

97762. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97763. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

97764. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

97765. Iron reacts with oxygen in air to form iron(III) oxide.

97766. Silicon reacts with oxygen to form silicon dioxide.

97767. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

97768. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

97769. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

97770. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

97771. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

97772. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

97773. Calcium Oxide combines with water to form calcium hydroxide.

97774. Butane burns in air to form carbon dioxide and water vapor and release heat.

97775. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

97776. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97777. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.

97778. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

97779. Copper reacts with oxygen in air to form copper(II) oxide.

97780. Carbon reacts with oxygen to form carbon dioxide.

97781. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

97782. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

97783. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

97784. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

97785. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

97786. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

97787. Hydrogen combines with oxygen to form water.

97788. Carbon Monoxide burns in air to form carbon dioxide and release heat.

97789. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

97790. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97791. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.

97792. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

97793. Lead reacts with oxygen in air to form lead(II) oxide.

97794. Sulfur reacts with oxygen to form sulfur dioxide.

97795. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

97796. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

97797. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

97798. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

97799. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

97800. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

97801. Nitrogen combines with hydrogen to form ammonia.

97802. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

97803. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

97804. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97805. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.

97806. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

97807. Magnesium reacts with oxygen in air to form magnesium oxide.

97808. Phosphorus reacts with oxygen to form phosphorus pentoxide.

97809. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

97810. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

97811. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

97812. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

97813. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

97814. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

97815. Sulfur combines with oxygen to form sulfur dioxide.

97816. Hydrogen burns in air to form water vapor and release heat.

97817. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

97818. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97819. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.

97820. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

97821. Calcium reacts with oxygen in air to form calcium oxide.

97822. Hydrogen reacts with oxygen to form water.

97823. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

97824. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

97825. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

97826. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

97827. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

97828. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

97829. Carbon combines with oxygen to form carbon dioxide.

97830. Methane burns in air to form carbon dioxide and water vapor and release heat.

97831. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

97832. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97833. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.

97834. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

97835. Aluminium reacts with oxygen in air to form aluminium oxide.

97836. Nitrogen reacts with oxygen to form nitrogen oxides.

97837. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

97838. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

97839. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

97840. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

97841. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

97842. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

97843. Phosphorus combines with oxygen to form phosphorus pentoxide.

97844. Ethane burns in air to form carbon dioxide and water vapor and release heat.

97845. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

97846. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97847. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.

97848. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

97849. Zinc reacts with oxygen in air to form zinc oxide.

97850. Silicon reacts with oxygen to form silicon dioxide.

97851. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

97852. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

97853. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

97854. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

97855. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

97856. On heating, hydrogen peroxide decomposes to form water and oxygen.

97857. Magnesium combines with oxygen to form magnesium oxide.

97858. Propane burns in air to form carbon dioxide and water vapor and release heat.

97859. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

97860. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97861. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.

97862. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

97863. Iron reacts with oxygen in air to form iron(III) oxide.

97864. Carbon reacts with oxygen to form carbon dioxide.

97865. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

97866. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

97867. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

97868. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

97869. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

97870. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

97871. Iron combines with sulfur to form iron sulfide.

97872. Butane burns in air to form carbon dioxide and water vapor and release heat.

97873. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

97874. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97875. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.

97876. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

97877. Copper reacts with oxygen in air to form copper(II) oxide.

97878. Sulfur reacts with oxygen to form sulfur dioxide.

97879. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

97880. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

97881. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

97882. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

97883. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

97884. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

97885. Calcium Oxide combines with water to form calcium hydroxide.

97886. Carbon Monoxide burns in air to form carbon dioxide and release heat.

97887. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

97888. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97889. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

97890. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

97891. Lead reacts with oxygen in air to form lead(II) oxide.

97892. Phosphorus reacts with oxygen to form phosphorus pentoxide.

97893. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

97894. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

97895. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

97896. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

97897. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

97898. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

97899. Hydrogen combines with oxygen to form water.

97900. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

97901. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

97902. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97903. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

97904. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

97905. Magnesium reacts with oxygen in air to form magnesium oxide.

97906. Hydrogen reacts with oxygen to form water.

97907. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

97908. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

97909. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

97910. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

97911. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

97912. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

97913. Nitrogen combines with hydrogen to form ammonia.

97914. Hydrogen burns in air to form water vapor and release heat.

97915. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

97916. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97917. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

97918. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

97919. Calcium reacts with oxygen in air to form calcium oxide.

97920. Nitrogen reacts with oxygen to form nitrogen oxides.

97921. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

97922. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

97923. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

97924. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

97925. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

97926. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

97927. Sulfur combines with oxygen to form sulfur dioxide.

97928. Methane burns in air to form carbon dioxide and water vapor and release heat.

97929. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

97930. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97931. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.

97932. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

97933. Aluminium reacts with oxygen in air to form aluminium oxide.

97934. Silicon reacts with oxygen to form silicon dioxide.

97935. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

97936. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

97937. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

97938. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

97939. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

97940. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

97941. Carbon combines with oxygen to form carbon dioxide.

97942. Ethane burns in air to form carbon dioxide and water vapor and release heat.

97943. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

97944. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97945. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.

97946. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

97947. Zinc reacts with oxygen in air to form zinc oxide.

97948. Carbon reacts with oxygen to form carbon dioxide.

97949. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

97950. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

97951. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

97952. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

97953. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

97954. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

97955. Phosphorus combines with oxygen to form phosphorus pentoxide.

97956. Propane burns in air to form carbon dioxide and water vapor and release heat.

97957. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

97958. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97959. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

97960. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

97961. Iron reacts with oxygen in air to form iron(III) oxide.

97962. Sulfur reacts with oxygen to form sulfur dioxide.

97963. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

97964. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

97965. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

97966. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

97967. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

97968. On heating, hydrogen peroxide decomposes to form water and oxygen.

97969. Magnesium combines with oxygen to form magnesium oxide.

97970. Butane burns in air to form carbon dioxide and water vapor and release heat.

97971. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

97972. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97973. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

97974. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

97975. Copper reacts with oxygen in air to form copper(II) oxide.

97976. Phosphorus reacts with oxygen to form phosphorus pentoxide.

97977. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

97978. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

97979. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

97980. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

97981. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

97982. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

97983. Iron combines with sulfur to form iron sulfide.

97984. Carbon Monoxide burns in air to form carbon dioxide and release heat.

97985. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

97986. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

97987. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

97988. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

97989. Lead reacts with oxygen in air to form lead(II) oxide.

97990. Hydrogen reacts with oxygen to form water.

97991. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

97992. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

97993. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

97994. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

97995. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

97996. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

97997. Calcium Oxide combines with water to form calcium hydroxide.

97998. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

97999. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

98000. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

98001. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

98002. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

98003. Magnesium reacts with oxygen in air to form magnesium oxide.

98004. Nitrogen reacts with oxygen to form nitrogen oxides.

98005. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

98006. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

98007. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

98008. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

98009. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

98010. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

98011. Hydrogen combines with oxygen to form water.

98012. Hydrogen burns in air to form water vapor and release heat.

98013. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

98014. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

98015. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

98016. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

98017. Calcium reacts with oxygen in air to form calcium oxide.

98018. Silicon reacts with oxygen to form silicon dioxide.

98019. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

98020. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

98021. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

98022. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

98023. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

98024. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

98025. Nitrogen combines with hydrogen to form ammonia.

98026. Methane burns in air to form carbon dioxide and water vapor and release heat.

98027. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

98028. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

98029. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
98030. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
98031. Aluminium reacts with oxygen in air to form aluminium oxide.
98032. Carbon reacts with oxygen to form carbon dioxide.
98033. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
98034. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
98035. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
98036. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
98037. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
98038. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
98039. Sulfur combines with oxygen to form sulfur dioxide.
98040. Ethane burns in air to form carbon dioxide and water vapor and release heat.
98041. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
98042. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98043. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
98044. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
98045. Zinc reacts with oxygen in air to form zinc oxide.
98046. Sulfur reacts with oxygen to form sulfur dioxide.
98047. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
98048. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
98049. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
98050. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
98051. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
98052. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
98053. Carbon combines with oxygen to form carbon dioxide.
98054. Propane burns in air to form carbon dioxide and water vapor and release heat.
98055. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
98056. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98057. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
98058. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
98059. Iron reacts with oxygen in air to form iron(III) oxide.
98060. Phosphorus reacts with oxygen to form phosphorus pentoxide.
98061. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
98062. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
98063. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
98064. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
98065. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
98066. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
98067. Phosphorus combines with oxygen to form phosphorus pentoxide.
98068. Butane burns in air to form carbon dioxide and water vapor and release heat.
98069. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
98070. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98071. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
98072. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
98073. Copper reacts with oxygen in air to form copper(II) oxide.
98074. Hydrogen reacts with oxygen to form water.
98075. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
98076. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
98077. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
98078. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
98079. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
98080. On heating, hydrogen peroxide decomposes to form water and oxygen.
98081. Magnesium combines with oxygen to form magnesium oxide.
98082. Carbon Monoxide burns in air to form carbon dioxide and release heat.
98083. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
98084. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98085. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
98086. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
98087. Lead reacts with oxygen in air to form lead(II) oxide.
98088. Nitrogen reacts with oxygen to form nitrogen oxides.
98089. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
98090. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
98091. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
98092. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
98093. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
98094. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
98095. Iron combines with sulfur to form iron sulfide.
98096. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
98097. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
98098. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98099. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
98100. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
98101. Magnesium reacts with oxygen in air to form magnesium oxide.
98102. Silicon reacts with oxygen to form silicon dioxide.
98103. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
98104. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
98105. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
98106. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
98107. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
98108. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
98109. Calcium Oxide combines with water to form calcium hydroxide.
98110. Hydrogen burns in air to form water vapor and release heat.
98111. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
98112. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98113. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
98114. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
98115. Calcium reacts with oxygen in air to form calcium oxide.
98116. Carbon reacts with oxygen to form carbon dioxide.
98117. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
98118. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
98119. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
98120. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
98121. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
98122. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
98123. Hydrogen combines with oxygen to form water.

98124. Methane burns in air to form carbon dioxide and water vapor and release heat.
98125. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
98126. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98127. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
98128. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
98129. Aluminium reacts with oxygen in air to form aluminium oxide.
98130. Sulfur reacts with oxygen to form sulfur dioxide.
98131. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
98132. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
98133. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
98134. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
98135. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
98136. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
98137. Nitrogen combines with hydrogen to form ammonia.
98138. Ethane burns in air to form carbon dioxide and water vapor and release heat.
98139. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
98140. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98141. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
98142. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
98143. Zinc reacts with oxygen in air to form zinc oxide.
98144. Phosphorus reacts with oxygen to form phosphorus pentoxide.
98145. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
98146. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
98147. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
98148. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
98149. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
98150. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
98151. Sulfur combines with oxygen to form sulfur dioxide.
98152. Propane burns in air to form carbon dioxide and water vapor and release heat.
98153. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
98154. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98155. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
98156. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
98157. Iron reacts with oxygen in air to form iron(III) oxide.
98158. Hydrogen reacts with oxygen to form water.
98159. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
98160. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
98161. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
98162. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
98163. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
98164. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
98165. Carbon combines with oxygen to form carbon dioxide.
98166. Butane burns in air to form carbon dioxide and water vapor and release heat.
98167. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
98168. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98169. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
98170. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
98171. Copper reacts with oxygen in air to form copper(II) oxide.
98172. Nitrogen reacts with oxygen to form nitrogen oxides.
98173. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
98174. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
98175. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
98176. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
98177. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
98178. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
98179. Phosphorus combines with oxygen to form phosphorus pentoxide.
98180. Carbon Monoxide burns in air to form carbon dioxide and release heat.
98181. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
98182. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98183. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
98184. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
98185. Lead reacts with oxygen in air to form lead(II) oxide.
98186. Silicon reacts with oxygen to form silicon dioxide.
98187. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
98188. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
98189. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
98190. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
98191. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
98192. On heating, hydrogen peroxide decomposes to form water and oxygen.
98193. Magnesium combines with oxygen to form magnesium oxide.
98194. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
98195. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
98196. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98197. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
98198. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
98199. Magnesium reacts with oxygen in air to form magnesium oxide.
98200. Carbon reacts with oxygen to form carbon dioxide.
98201. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
98202. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
98203. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
98204. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
98205. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
98206. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
98207. Iron combines with sulfur to form iron sulfide.
98208. Hydrogen burns in air to form water vapor and release heat.
98209. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
98210. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98211. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
98212. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
98213. Calcium reacts with oxygen in air to form calcium oxide.
98214. Sulfur reacts with oxygen to form sulfur dioxide.
98215. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

98216. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
98217. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
98218. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
98219. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
98220. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
98221. Calcium Oxide combines with water to form calcium hydroxide.
98222. Methane burns in air to form carbon dioxide and water vapor and release heat.
98223. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
98224. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98225. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
98226. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
98227. Aluminium reacts with oxygen in air to form aluminium oxide.
98228. Phosphorus reacts with oxygen to form phosphorus pentoxide.
98229. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
98230. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
98231. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
98232. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
98233. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
98234. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
98235. Hydrogen combines with oxygen to form water.
98236. Ethane burns in air to form carbon dioxide and water vapor and release heat.
98237. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
98238. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98239. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
98240. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
98241. Zinc reacts with oxygen in air to form zinc oxide.
98242. Hydrogen reacts with oxygen to form water.
98243. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
98244. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
98245. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
98246. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
98247. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
98248. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
98249. Nitrogen combines with hydrogen to form ammonia.
98250. Propane burns in air to form carbon dioxide and water vapor and release heat.
98251. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
98252. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98253. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
98254. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
98255. Iron reacts with oxygen in air to form iron(III) oxide.
98256. Nitrogen reacts with oxygen to form nitrogen oxides.
98257. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
98258. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
98259. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
98260. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
98261. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
98262. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
98263. Sulfur combines with oxygen to form sulfur dioxide.
98264. Butane burns in air to form carbon dioxide and water vapor and release heat.
98265. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
98266. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98267. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
98268. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
98269. Copper reacts with oxygen in air to form copper(II) oxide.
98270. Silicon reacts with oxygen to form silicon dioxide.
98271. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
98272. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
98273. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
98274. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
98275. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
98276. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
98277. Carbon combines with oxygen to form carbon dioxide.
98278. Carbon Monoxide burns in air to form carbon dioxide and release heat.
98279. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
98280. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98281. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
98282. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
98283. Lead reacts with oxygen in air to form lead(II) oxide.
98284. Carbon reacts with oxygen to form carbon dioxide.
98285. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
98286. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
98287. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
98288. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
98289. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
98290. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
98291. Phosphorus combines with oxygen to form phosphorus pentoxide.
98292. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
98293. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
98294. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98295. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
98296. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
98297. Magnesium reacts with oxygen in air to form magnesium oxide.
98298. Sulfur reacts with oxygen to form sulfur dioxide.
98299. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
98300. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
98301. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
98302. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
98303. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
98304. On heating, hydrogen peroxide decomposes to form water and oxygen.
98305. Magnesium combines with oxygen to form magnesium oxide.
98306. Hydrogen burns in air to form water vapor and release heat.
98307. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
98308. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

98309. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
98310. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
98311. Calcium reacts with oxygen in air to form calcium oxide.
98312. Phosphorus reacts with oxygen to form phosphorus pentoxide.
98313. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
98314. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
98315. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
98316. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
98317. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
98318. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
98319. Iron combines with sulfur to form iron sulfide.
98320. Methane burns in air to form carbon dioxide and water vapor and release heat.
98321. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
98322. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98323. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
98324. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
98325. Aluminium reacts with oxygen in air to form aluminium oxide.
98326. Hydrogen reacts with oxygen to form water.
98327. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
98328. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
98329. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
98330. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
98331. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
98332. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
98333. Calcium Oxide combines with water to form calcium hydroxide.
98334. Ethane burns in air to form carbon dioxide and water vapor and release heat.
98335. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
98336. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98337. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
98338. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
98339. Zinc reacts with oxygen in air to form zinc oxide.
98340. Nitrogen reacts with oxygen to form nitrogen oxides.
98341. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
98342. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
98343. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
98344. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
98345. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
98346. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
98347. Hydrogen combines with oxygen to form water.
98348. Propane burns in air to form carbon dioxide and water vapor and release heat.
98349. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
98350. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98351. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
98352. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
98353. Iron reacts with oxygen in air to form iron(III) oxide.
98354. Silicon reacts with oxygen to form silicon dioxide.

98355. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
98356. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
98357. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
98358. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
98359. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
98360. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
98361. Nitrogen combines with hydrogen to form ammonia.
98362. Butane burns in air to form carbon dioxide and water vapor and release heat.
98363. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
98364. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98365. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
98366. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
98367. Copper reacts with oxygen in air to form copper(II) oxide.
98368. Carbon reacts with oxygen to form carbon dioxide.
98369. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
98370. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
98371. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
98372. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
98373. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
98374. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
98375. Sulfur combines with oxygen to form sulfur dioxide.
98376. Carbon Monoxide burns in air to form carbon dioxide and release heat.
98377. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
98378. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98379. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
98380. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
98381. Lead reacts with oxygen in air to form lead(II) oxide.
98382. Sulfur reacts with oxygen to form sulfur dioxide.
98383. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
98384. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
98385. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
98386. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
98387. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
98388. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
98389. Carbon combines with oxygen to form carbon dioxide.
98390. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
98391. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
98392. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98393. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
98394. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
98395. Magnesium reacts with oxygen in air to form magnesium oxide.
98396. Phosphorus reacts with oxygen to form phosphorus pentoxide.
98397. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
98398. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
98399. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
98400. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

98401. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
98402. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
98403. Phosphorus combines with oxygen to form phosphorus pentoxide.
98404. Hydrogen burns in air to form water vapor and release heat.
98405. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
98406. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98407. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
98408. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
98409. Calcium reacts with oxygen in air to form calcium oxide.
98410. Hydrogen reacts with oxygen to form water.
98411. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
98412. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
98413. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
98414. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
98415. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
98416. On heating, hydrogen peroxide decomposes to form water and oxygen.
98417. Magnesium combines with oxygen to form magnesium oxide.
98418. Methane burns in air to form carbon dioxide and water vapor and release heat.
98419. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
98420. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98421. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
98422. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
98423. Aluminium reacts with oxygen in air to form aluminium oxide.
98424. Nitrogen reacts with oxygen to form nitrogen oxides.
98425. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
98426. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
98427. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
98428. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
98429. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
98430. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
98431. Iron combines with sulfur to form iron sulfide.
98432. Ethane burns in air to form carbon dioxide and water vapor and release heat.
98433. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
98434. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98435. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
98436. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
98437. Zinc reacts with oxygen in air to form zinc oxide.
98438. Silicon reacts with oxygen to form silicon dioxide.
98439. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
98440. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
98441. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
98442. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
98443. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
98444. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
98445. Calcium Oxide combines with water to form calcium hydroxide.
98446. Propane burns in air to form carbon dioxide and water vapor and release heat.
98447. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
98448. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98449. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
98450. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
98451. Iron reacts with oxygen in air to form iron(III) oxide.
98452. Carbon reacts with oxygen to form carbon dioxide.
98453. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
98454. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
98455. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
98456. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
98457. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
98458. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
98459. Hydrogen combines with oxygen to form water.
98460. Butane burns in air to form carbon dioxide and water vapor and release heat.
98461. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
98462. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98463. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
98464. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
98465. Copper reacts with oxygen in air to form copper(II) oxide.
98466. Sulfur reacts with oxygen to form sulfur dioxide.
98467. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
98468. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
98469. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
98470. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
98471. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
98472. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
98473. Nitrogen combines with hydrogen to form ammonia.
98474. Carbon Monoxide burns in air to form carbon dioxide and release heat.
98475. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
98476. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98477. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
98478. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
98479. Lead reacts with oxygen in air to form lead(II) oxide.
98480. Phosphorus reacts with oxygen to form phosphorus pentoxide.
98481. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
98482. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
98483. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
98484. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
98485. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
98486. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
98487. Sulfur combines with oxygen to form sulfur dioxide.
98488. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
98489. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
98490. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98491. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
98492. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
98493. Magnesium reacts with oxygen in air to form magnesium oxide.
98494. Hydrogen reacts with oxygen to form water.

98495. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
98496. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
98497. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
98498. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
98499. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
98500. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
98501. Carbon combines with oxygen to form carbon dioxide.
98502. Hydrogen burns in air to form water vapor and release heat.
98503. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
98504. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98505. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
98506. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
98507. Calcium reacts with oxygen in air to form calcium oxide.
98508. Nitrogen reacts with oxygen to form nitrogen oxides.
98509. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
98510. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
98511. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
98512. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
98513. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
98514. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
98515. Phosphorus combines with oxygen to form phosphorus pentoxide.
98516. Methane burns in air to form carbon dioxide and water vapor and release heat.
98517. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
98518. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98519. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
98520. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
98521. Aluminium reacts with oxygen in air to form aluminium oxide.
98522. Silicon reacts with oxygen to form silicon dioxide.
98523. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
98524. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
98525. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
98526. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
98527. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
98528. On heating, hydrogen peroxide decomposes to form water and oxygen.
98529. Magnesium combines with oxygen to form magnesium oxide.
98530. Ethane burns in air to form carbon dioxide and water vapor and release heat.
98531. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
98532. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98533. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
98534. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
98535. Zinc reacts with oxygen in air to form zinc oxide.
98536. Carbon reacts with oxygen to form carbon dioxide.
98537. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
98538. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
98539. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
98540. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
98541. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
98542. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
98543. Iron combines with sulfur to form iron sulfide.
98544. Propane burns in air to form carbon dioxide and water vapor and release heat.
98545. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
98546. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98547. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
98548. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
98549. Iron reacts with oxygen in air to form iron(III) oxide.
98550. Sulfur reacts with oxygen to form sulfur dioxide.
98551. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
98552. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
98553. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
98554. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
98555. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
98556. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
98557. Calcium Oxide combines with water to form calcium hydroxide.
98558. Butane burns in air to form carbon dioxide and water vapor and release heat.
98559. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
98560. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98561. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
98562. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
98563. Copper reacts with oxygen in air to form copper(II) oxide.
98564. Phosphorus reacts with oxygen to form phosphorus pentoxide.
98565. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
98566. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
98567. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
98568. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
98569. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
98570. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
98571. Hydrogen combines with oxygen to form water.
98572. Carbon Monoxide burns in air to form carbon dioxide and release heat.
98573. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
98574. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98575. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
98576. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
98577. Lead reacts with oxygen in air to form lead(II) oxide.
98578. Hydrogen reacts with oxygen to form water.
98579. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
98580. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
98581. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
98582. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
98583. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
98584. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
98585. Nitrogen combines with hydrogen to form ammonia.
98586. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

98587. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
98588. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98589. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
98590. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
98591. Magnesium reacts with oxygen in air to form magnesium oxide.
98592. Nitrogen reacts with oxygen to form nitrogen oxides.
98593. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
98594. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
98595. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
98596. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
98597. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
98598. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
98599. Sulfur combines with oxygen to form sulfur dioxide.
98600. Hydrogen burns in air to form water vapor and release heat.
98601. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
98602. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98603. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
98604. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
98605. Calcium reacts with oxygen in air to form calcium oxide.
98606. Silicon reacts with oxygen to form silicon dioxide.
98607. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
98608. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
98609. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
98610. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
98611. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
98612. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
98613. Carbon combines with oxygen to form carbon dioxide.
98614. Methane burns in air to form carbon dioxide and water vapor and release heat.
98615. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
98616. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98617. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
98618. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
98619. Aluminium reacts with oxygen in air to form aluminium oxide.
98620. Carbon reacts with oxygen to form carbon dioxide.
98621. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
98622. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
98623. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
98624. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
98625. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
98626. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
98627. Phosphorus combines with oxygen to form phosphorus pentoxide.
98628. Ethane burns in air to form carbon dioxide and water vapor and release heat.
98629. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
98630. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98631. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
98632. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
98633. Zinc reacts with oxygen in air to form zinc oxide.
98634. Sulfur reacts with oxygen to form sulfur dioxide.
98635. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
98636. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
98637. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
98638. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
98639. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
98640. On heating, hydrogen peroxide decomposes to form water and oxygen.
98641. Magnesium combines with oxygen to form magnesium oxide.
98642. Propane burns in air to form carbon dioxide and water vapor and release heat.
98643. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
98644. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98645. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
98646. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
98647. Iron reacts with oxygen in air to form iron(III) oxide.
98648. Phosphorus reacts with oxygen to form phosphorus pentoxide.
98649. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
98650. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
98651. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
98652. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
98653. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
98654. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
98655. Iron combines with sulfur to form iron sulfide.
98656. Butane burns in air to form carbon dioxide and water vapor and release heat.
98657. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
98658. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98659. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
98660. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
98661. Copper reacts with oxygen in air to form copper(II) oxide.
98662. Hydrogen reacts with oxygen to form water.
98663. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
98664. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
98665. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
98666. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
98667. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
98668. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
98669. Calcium Oxide combines with water to form calcium hydroxide.
98670. Carbon Monoxide burns in air to form carbon dioxide and release heat.
98671. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
98672. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98673. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
98674. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
98675. Lead reacts with oxygen in air to form lead(II) oxide.
98676. Nitrogen reacts with oxygen to form nitrogen oxides.
98677. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
98678. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
98679. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

98680. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

98681. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

98682. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

98683. Hydrogen combines with oxygen to form water.

98684. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

98685. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

98686. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

98687. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

98688. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

98689. Magnesium reacts with oxygen in air to form magnesium oxide.

98690. Silicon reacts with oxygen to form silicon dioxide.

98691. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

98692. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

98693. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

98694. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

98695. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

98696. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

98697. Nitrogen combines with hydrogen to form ammonia.

98698. Hydrogen burns in air to form water vapor and release heat.

98699. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

98700. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

98701. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

98702. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

98703. Calcium reacts with oxygen in air to form calcium oxide.

98704. Carbon reacts with oxygen to form carbon dioxide.

98705. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

98706. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

98707. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

98708. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

98709. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

98710. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

98711. Sulfur combines with oxygen to form sulfur dioxide.

98712. Methane burns in air to form carbon dioxide and water vapor and release heat.

98713. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

98714. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

98715. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

98716. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

98717. Aluminium reacts with oxygen in air to form aluminium oxide.

98718. Sulfur reacts with oxygen to form sulfur dioxide.

98719. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

98720. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

98721. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

98722. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

98723. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

98724. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

98725. Carbon combines with oxygen to form carbon dioxide.

98726. Ethane burns in air to form carbon dioxide and water vapor and release heat.

98727. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

98728. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

98729. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

98730. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

98731. Zinc reacts with oxygen in air to form zinc oxide.

98732. Phosphorus reacts with oxygen to form phosphorus pentoxide.

98733. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

98734. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

98735. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

98736. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

98737. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

98738. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

98739. Phosphorus combines with oxygen to form phosphorus pentoxide.

98740. Propane burns in air to form carbon dioxide and water vapor and release heat.

98741. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

98742. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

98743. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

98744. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

98745. Iron reacts with oxygen in air to form iron(III) oxide.

98746. Hydrogen reacts with oxygen to form water.

98747. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

98748. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

98749. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

98750. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

98751. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

98752. On heating, hydrogen peroxide decomposes to form water and oxygen.

98753. Magnesium combines with oxygen to form magnesium oxide.

98754. Butane burns in air to form carbon dioxide and water vapor and release heat.

98755. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

98756. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

98757. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

98758. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

98759. Copper reacts with oxygen in air to form copper(II) oxide.

98760. Nitrogen reacts with oxygen to form nitrogen oxides.

98761. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

98762. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

98763. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

98764. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

98765. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

98766. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

98767. Iron combines with sulfur to form iron sulfide.

98768. Carbon Monoxide burns in air to form carbon dioxide and release heat.

98769. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

98770. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

98771. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

98772. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

98773. Lead reacts with oxygen in air to form lead(II) oxide.
98774. Silicon reacts with oxygen to form silicon dioxide.
98775. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
98776. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
98777. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
98778. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
98779. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
98780. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
98781. Calcium Oxide combines with water to form calcium hydroxide.
98782. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
98783. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
98784. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98785. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
98786. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
98787. Magnesium reacts with oxygen in air to form magnesium oxide.
98788. Carbon reacts with oxygen to form carbon dioxide.
98789. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
98790. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
98791. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
98792. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
98793. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
98794. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
98795. Hydrogen combines with oxygen to form water.
98796. Hydrogen burns in air to form water vapor and release heat.
98797. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
98798. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98799. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
98800. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
98801. Calcium reacts with oxygen in air to form calcium oxide.
98802. Sulfur reacts with oxygen to form sulfur dioxide.
98803. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
98804. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
98805. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
98806. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
98807. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
98808. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
98809. Nitrogen combines with hydrogen to form ammonia.
98810. Methane burns in air to form carbon dioxide and water vapor and release heat.
98811. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
98812. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98813. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
98814. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
98815. Aluminium reacts with oxygen in air to form aluminium oxide.
98816. Phosphorus reacts with oxygen to form phosphorus pentoxide.
98817. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
98818. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
98819. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
98820. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
98821. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
98822. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
98823. Sulfur combines with oxygen to form sulfur dioxide.
98824. Ethane burns in air to form carbon dioxide and water vapor and release heat.
98825. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
98826. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98827. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
98828. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
98829. Zinc reacts with oxygen in air to form zinc oxide.
98830. Hydrogen reacts with oxygen to form water.
98831. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
98832. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
98833. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
98834. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
98835. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
98836. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
98837. Carbon combines with oxygen to form carbon dioxide.
98838. Propane burns in air to form carbon dioxide and water vapor and release heat.
98839. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
98840. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98841. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
98842. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
98843. Iron reacts with oxygen in air to form iron(III) oxide.
98844. Nitrogen reacts with oxygen to form nitrogen oxides.
98845. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
98846. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
98847. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
98848. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
98849. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
98850. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
98851. Phosphorus combines with oxygen to form phosphorus pentoxide.
98852. Butane burns in air to form carbon dioxide and water vapor and release heat.
98853. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
98854. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98855. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
98856. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
98857. Copper reacts with oxygen in air to form copper(II) oxide.
98858. Silicon reacts with oxygen to form silicon dioxide.
98859. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
98860. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
98861. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
98862. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
98863. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
98864. On heating, hydrogen peroxide decomposes to form water and oxygen.
98865. Magnesium combines with oxygen to form magnesium oxide.

98866. Carbon Monoxide burns in air to form carbon dioxide and release heat.
98867. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
98868. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98869. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
98870. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
98871. Lead reacts with oxygen in air to form lead(II) oxide.
98872. Carbon reacts with oxygen to form carbon dioxide.
98873. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
98874. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
98875. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
98876. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
98877. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
98878. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
98879. Iron combines with sulfur to form iron sulfide.
98880. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
98881. Copper(I) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
98882. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98883. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
98884. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
98885. Magnesium reacts with oxygen in air to form magnesium oxide.
98886. Sulfur reacts with oxygen to form sulfur dioxide.
98887. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
98888. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
98889. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
98890. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
98891. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
98892. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
98893. Calcium Oxide combines with water to form calcium hydroxide.
98894. Hydrogen burns in air to form water vapor and release heat.
98895. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
98896. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98897. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
98898. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
98899. Calcium reacts with oxygen in air to form calcium oxide.
98900. Phosphorus reacts with oxygen to form phosphorus pentoxide.
98901. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
98902. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
98903. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
98904. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
98905. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
98906. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
98907. Hydrogen combines with oxygen to form water.
98908. Methane burns in air to form carbon dioxide and water vapor and release heat.
98909. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
98910. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98911. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
98912. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
98913. Aluminium reacts with oxygen in air to form aluminium oxide.
98914. Hydrogen reacts with oxygen to form water.
98915. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
98916. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
98917. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
98918. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
98919. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
98920. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
98921. Nitrogen combines with hydrogen to form ammonia.
98922. Ethane burns in air to form carbon dioxide and water vapor and release heat.
98923. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
98924. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98925. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
98926. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
98927. Zinc reacts with oxygen in air to form zinc oxide.
98928. Nitrogen reacts with oxygen to form nitrogen oxides.
98929. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
98930. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
98931. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
98932. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
98933. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
98934. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
98935. Sulfur combines with oxygen to form sulfur dioxide.
98936. Propane burns in air to form carbon dioxide and water vapor and release heat.
98937. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
98938. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98939. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
98940. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
98941. Iron reacts with oxygen in air to form iron(III) oxide.
98942. Silicon reacts with oxygen to form silicon dioxide.
98943. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
98944. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
98945. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
98946. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
98947. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
98948. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
98949. Carbon combines with oxygen to form carbon dioxide.
98950. Butane burns in air to form carbon dioxide and water vapor and release heat.
98951. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
98952. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
98953. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
98954. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
98955. Copper reacts with oxygen in air to form copper(II) oxide.
98956. Carbon reacts with oxygen to form carbon dioxide.
98957. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

98958. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

98959. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

98960. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

98961. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

98962. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

98963. Phosphorus combines with oxygen to form phosphorus pentoxide.

98964. Carbon Monoxide burns in air to form carbon dioxide and release heat.

98965. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

98966. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

98967. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

98968. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

98969. Lead reacts with oxygen in air to form lead(II) oxide.

98970. Sulfur reacts with oxygen to form sulfur dioxide.

98971. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

98972. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

98973. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

98974. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

98975. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

98976. On heating, hydrogen peroxide decomposes to form water and oxygen.

98977. Magnesium combines with oxygen to form magnesium oxide.

98978. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

98979. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

98980. Copper(I) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

98981. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

98982. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

98983. Magnesium reacts with oxygen in air to form magnesium oxide.

98984. Phosphorus reacts with oxygen to form phosphorus pentoxide.

98985. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

98986. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

98987. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

98988. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

98989. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

98990. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

98991. Iron combines with sulfur to form iron sulfide.

98992. Hydrogen burns in air to form water vapor and release heat.

98993. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

98994. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

98995. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

98996. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

98997. Calcium reacts with oxygen in air to form calcium oxide.

98998. Hydrogen reacts with oxygen to form water.

98999. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

99000. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

99001. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

99002. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

99003. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

99004. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

99005. Calcium Oxide combines with water to form calcium hydroxide.

99006. Methane burns in air to form carbon dioxide and water vapor and release heat.

99007. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

99008. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99009. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

99010. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

99011. Aluminium reacts with oxygen in air to form aluminium oxide.

99012. Nitrogen reacts with oxygen to form nitrogen oxides.

99013. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

99014. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

99015. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

99016. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

99017. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

99018. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

99019. Hydrogen combines with oxygen to form water.

99020. Ethane burns in air to form carbon dioxide and water vapor and release heat.

99021. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

99022. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99023. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

99024. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

99025. Zinc reacts with oxygen in air to form zinc oxide.

99026. Silicon reacts with oxygen to form silicon dioxide.

99027. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

99028. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

99029. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

99030. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

99031. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

99032. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

99033. Nitrogen combines with hydrogen to form ammonia.

99034. Propane burns in air to form carbon dioxide and water vapor and release heat.

99035. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

99036. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99037. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

99038. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

99039. Iron reacts with oxygen in air to form iron(III) oxide.

99040. Carbon reacts with oxygen to form carbon dioxide.

99041. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

99042. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

99043. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

99044. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

99045. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

99046. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

99047. Sulfur combines with oxygen to form sulfur dioxide.

99048. Butane burns in air to form carbon dioxide and water vapor and release heat.

99049. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
99050. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99051. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
99052. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
99053. Copper reacts with oxygen in air to form copper(II) oxide.
99054. Sulfur reacts with oxygen to form sulfur dioxide.
99055. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
99056. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
99057. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
99058. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
99059. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
99060. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
99061. Carbon combines with oxygen to form carbon dioxide.
99062. Carbon Monoxide burns in air to form carbon dioxide and release heat.
99063. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
99064. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99065. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
99066. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
99067. Lead reacts with oxygen in air to form lead(II) oxide.
99068. Phosphorus reacts with oxygen to form phosphorus pentoxide.
99069. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
99070. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
99071. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
99072. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
99073. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
99074. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
99075. Phosphorus combines with oxygen to form phosphorus pentoxide.
99076. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
99077. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
99078. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99079. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
99080. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
99081. Magnesium reacts with oxygen in air to form magnesium oxide.
99082. Hydrogen reacts with oxygen to form water.
99083. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
99084. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
99085. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
99086. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
99087. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
99088. On heating, hydrogen peroxide decomposes to form water and oxygen.
99089. Magnesium combines with oxygen to form magnesium oxide.
99090. Hydrogen burns in air to form water vapor and release heat.
99091. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
99092. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99093. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
99094. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
99095. Calcium reacts with oxygen in air to form calcium oxide.
99096. Nitrogen reacts with oxygen to form nitrogen oxides.
99097. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
99098. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
99099. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
99100. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
99101. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
99102. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
99103. Iron combines with sulfur to form iron sulfide.
99104. Methane burns in air to form carbon dioxide and water vapor and release heat.
99105. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
99106. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99107. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
99108. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
99109. Aluminium reacts with oxygen in air to form aluminium oxide.
99110. Silicon reacts with oxygen to form silicon dioxide.
99111. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
99112. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
99113. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
99114. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
99115. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
99116. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
99117. Calcium Oxide combines with water to form calcium hydroxide.
99118. Ethane burns in air to form carbon dioxide and water vapor and release heat.
99119. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
99120. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99121. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
99122. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
99123. Zinc reacts with oxygen in air to form zinc oxide.
99124. Carbon reacts with oxygen to form carbon dioxide.
99125. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
99126. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
99127. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
99128. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
99129. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
99130. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
99131. Hydrogen combines with oxygen to form water.
99132. Propane burns in air to form carbon dioxide and water vapor and release heat.
99133. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
99134. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99135. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
99136. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
99137. Iron reacts with oxygen in air to form iron(III) oxide.
99138. Sulfur reacts with oxygen to form sulfur dioxide.
99139. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
99140. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
99141. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
99142. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

99143. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

99144. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

99145. Nitrogen combines with hydrogen to form ammonia.

99146. Butane burns in air to form carbon dioxide and water vapor and release heat.

99147. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

99148. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99149. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.

99150. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

99151. Copper reacts with oxygen in air to form copper(II) oxide.

99152. Phosphorus reacts with oxygen to form phosphorus pentoxide.

99153. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

99154. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

99155. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

99156. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

99157. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

99158. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

99159. Sulfur combines with oxygen to form sulfur dioxide.

99160. Carbon Monoxide burns in air to form carbon dioxide and release heat.

99161. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

99162. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99163. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.

99164. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

99165. Lead reacts with oxygen in air to form lead(II) oxide.

99166. Hydrogen reacts with oxygen to form water.

99167. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

99168. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

99169. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

99170. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

99171. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

99172. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

99173. Carbon combines with oxygen to form carbon dioxide.

99174. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

99175. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

99176. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99177. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.

99178. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

99179. Magnesium reacts with oxygen in air to form magnesium oxide.

99180. Nitrogen reacts with oxygen to form nitrogen oxides.

99181. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

99182. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

99183. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

99184. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

99185. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

99186. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

99187. Phosphorus combines with oxygen to form phosphorus pentoxide.

99188. Hydrogen burns in air to form water vapor and release heat.

99189. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

99190. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99191. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.

99192. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

99193. Calcium reacts with oxygen in air to form calcium oxide.

99194. Silicon reacts with oxygen to form silicon dioxide.

99195. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

99196. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

99197. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

99198. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

99199. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

99200. On heating, hydrogen peroxide decomposes to form water and oxygen.

99201. Magnesium combines with oxygen to form magnesium oxide.

99202. Methane burns in air to form carbon dioxide and water vapor and release heat.

99203. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

99204. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99205. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.

99206. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

99207. Aluminium reacts with oxygen in air to form aluminium oxide.

99208. Carbon reacts with oxygen to form carbon dioxide.

99209. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

99210. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

99211. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

99212. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

99213. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

99214. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

99215. Iron combines with sulfur to form iron sulfide.

99216. Ethane burns in air to form carbon dioxide and water vapor and release heat.

99217. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

99218. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99219. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.

99220. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

99221. Zinc reacts with oxygen in air to form zinc oxide.

99222. Sulfur reacts with oxygen to form sulfur dioxide.

99223. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

99224. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

99225. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

99226. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

99227. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

99228. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

99229. Calcium Oxide combines with water to form calcium hydroxide.

99230. Propane burns in air to form carbon dioxide and water vapor and release heat.

99231. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

99232. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99233. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

99234. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

99235. Iron reacts with oxygen in air to form iron(III) oxide.
99236. Phosphorus reacts with oxygen to form phosphorus pentoxide.
99237. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
99238. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
99239. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
99240. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
99241. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
99242. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
99243. Hydrogen combines with oxygen to form water.
99244. Butane burns in air to form carbon dioxide and water vapor and release heat.
99245. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
99246. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99247. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
99248. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
99249. Copper reacts with oxygen in air to form copper(II) oxide.
99250. Hydrogen reacts with oxygen to form water.
99251. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
99252. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
99253. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
99254. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
99255. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
99256. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
99257. Nitrogen combines with hydrogen to form ammonia.
99258. Carbon Monoxide burns in air to form carbon dioxide and release heat.
99259. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
99260. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99261. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
99262. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
99263. Lead reacts with oxygen in air to form lead(II) oxide.
99264. Nitrogen reacts with oxygen to form nitrogen oxides.
99265. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
99266. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
99267. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
99268. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
99269. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
99270. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
99271. Sulfur combines with oxygen to form sulfur dioxide.
99272. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
99273. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
99274. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99275. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
99276. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
99277. Magnesium reacts with oxygen in air to form magnesium oxide.
99278. Silicon reacts with oxygen to form silicon dioxide.
99279. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
99280. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
99281. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
99282. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
99283. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
99284. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
99285. Carbon combines with oxygen to form carbon dioxide.
99286. Hydrogen burns in air to form water vapor and release heat.
99287. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
99288. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99289. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
99290. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
99291. Calcium reacts with oxygen in air to form calcium oxide.
99292. Carbon reacts with oxygen to form carbon dioxide.
99293. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
99294. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
99295. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
99296. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
99297. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
99298. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
99299. Phosphorus combines with oxygen to form phosphorus pentoxide.
99300. Methane burns in air to form carbon dioxide and water vapor and release heat.
99301. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
99302. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99303. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
99304. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
99305. Aluminium reacts with oxygen in air to form aluminium oxide.
99306. Sulfur reacts with oxygen to form sulfur dioxide.
99307. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
99308. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
99309. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
99310. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
99311. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
99312. On heating, hydrogen peroxide decomposes to form water and oxygen.
99313. Magnesium combines with oxygen to form magnesium oxide.
99314. Ethane burns in air to form carbon dioxide and water vapor and release heat.
99315. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
99316. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99317. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
99318. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
99319. Zinc reacts with oxygen in air to form zinc oxide.
99320. Phosphorus reacts with oxygen to form phosphorus pentoxide.
99321. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
99322. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
99323. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
99324. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
99325. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
99326. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
99327. Iron combines with sulfur to form iron sulfide.
99328. Propane burns in air to form carbon dioxide and water vapor and release heat.

99329. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

99330. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99331. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

99332. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

99333. Iron reacts with oxygen in air to form iron(III) oxide.

99334. Hydrogen reacts with oxygen to form water.

99335. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

99336. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

99337. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

99338. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

99339. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

99340. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

99341. Calcium Oxide combines with water to form calcium hydroxide.

99342. Butane burns in air to form carbon dioxide and water vapor and release heat.

99343. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

99344. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99345. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

99346. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

99347. Copper reacts with oxygen in air to form copper(II) oxide.

99348. Nitrogen reacts with oxygen to form nitrogen oxides.

99349. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

99350. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

99351. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

99352. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

99353. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

99354. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

99355. Hydrogen combines with oxygen to form water.

99356. Carbon Monoxide burns in air to form carbon dioxide and release heat.

99357. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

99358. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99359. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

99360. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

99361. Lead reacts with oxygen in air to form lead(II) oxide.

99362. Silicon reacts with oxygen to form silicon dioxide.

99363. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

99364. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

99365. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

99366. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

99367. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

99368. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

99369. Nitrogen combines with hydrogen to form ammonia.

99370. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

99371. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

99372. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99373. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

99374. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

99375. Magnesium reacts with oxygen in air to form magnesium oxide.

99376. Carbon reacts with oxygen to form carbon dioxide.

99377. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

99378. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

99379. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

99380. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

99381. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

99382. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

99383. Sulfur combines with oxygen to form sulfur dioxide.

99384. Hydrogen burns in air to form water vapor and release heat.

99385. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

99386. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99387. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

99388. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

99389. Calcium reacts with oxygen in air to form calcium oxide.

99390. Sulfur reacts with oxygen to form sulfur dioxide.

99391. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

99392. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

99393. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

99394. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

99395. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

99396. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

99397. Carbon combines with oxygen to form carbon dioxide.

99398. Methane burns in air to form carbon dioxide and water vapor and release heat.

99399. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

99400. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99401. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

99402. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

99403. Aluminium reacts with oxygen in air to form aluminium oxide.

99404. Phosphorus reacts with oxygen to form phosphorus pentoxide.

99405. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

99406. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

99407. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

99408. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

99409. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

99410. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

99411. Phosphorus combines with oxygen to form phosphorus pentoxide.

99412. Ethane burns in air to form carbon dioxide and water vapor and release heat.

99413. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

99414. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99415. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

99416. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

99417. Zinc reacts with oxygen in air to form zinc oxide.

99418. Hydrogen reacts with oxygen to form water.

99419. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

99420. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

99421. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
99422. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
99423. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
99424. On heating, hydrogen peroxide decomposes to form water and oxygen.
99425. Magnesium combines with oxygen to form magnesium oxide.
99426. Propane burns in air to form carbon dioxide and water vapor and release heat.
99427. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
99428. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99429. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
99430. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
99431. Iron reacts with oxygen in air to form iron(III) oxide.
99432. Nitrogen reacts with oxygen to form nitrogen oxides.
99433. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
99434. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
99435. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
99436. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
99437. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
99438. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
99439. Iron combines with sulfur to form iron sulfide.
99440. Butane burns in air to form carbon dioxide and water vapor and release heat.
99441. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
99442. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99443. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
99444. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
99445. Copper reacts with oxygen in air to form copper(II) oxide.
99446. Silicon reacts with oxygen to form silicon dioxide.
99447. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
99448. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
99449. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
99450. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
99451. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
99452. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
99453. Calcium Oxide combines with water to form calcium hydroxide.
99454. Carbon Monoxide burns in air to form carbon dioxide and release heat.
99455. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
99456. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99457. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
99458. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
99459. Lead reacts with oxygen in air to form lead(II) oxide.
99460. Carbon reacts with oxygen to form carbon dioxide.
99461. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
99462. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
99463. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
99464. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
99465. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
99466. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
99467. Hydrogen combines with oxygen to form water.
99468. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
99469. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
99470. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99471. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
99472. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
99473. Magnesium reacts with oxygen in air to form magnesium oxide.
99474. Sulfur reacts with oxygen to form sulfur dioxide.
99475. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
99476. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
99477. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
99478. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
99479. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
99480. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
99481. Nitrogen combines with hydrogen to form ammonia.
99482. Hydrogen burns in air to form water vapor and release heat.
99483. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
99484. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99485. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
99486. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
99487. Calcium reacts with oxygen in air to form calcium oxide.
99488. Phosphorus reacts with oxygen to form phosphorus pentoxide.
99489. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
99490. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
99491. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
99492. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
99493. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
99494. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
99495. Sulfur combines with oxygen to form sulfur dioxide.
99496. Methane burns in air to form carbon dioxide and water vapor and release heat.
99497. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
99498. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99499. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
99500. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
99501. Aluminium reacts with oxygen in air to form aluminium oxide.
99502. Hydrogen reacts with oxygen to form water.
99503. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
99504. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
99505. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
99506. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
99507. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
99508. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
99509. Carbon combines with oxygen to form carbon dioxide.
99510. Ethane burns in air to form carbon dioxide and water vapor and release heat.
99511. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
99512. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99513. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
99514. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
99515. Zinc reacts with oxygen in air to form zinc oxide.
99516. Nitrogen reacts with oxygen to form nitrogen oxides.
99517. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
99518. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
99519. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
99520. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
99521. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
99522. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
99523. Phosphorus combines with oxygen to form phosphorus pentoxide.
99524. Propane burns in air to form carbon dioxide and water vapor and release heat.
99525. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
99526. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99527. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
99528. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
99529. Iron reacts with oxygen in air to form iron(III) oxide.
99530. Silicon reacts with oxygen to form silicon dioxide.
99531. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
99532. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
99533. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
99534. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
99535. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
99536. On heating, hydrogen peroxide decomposes to form water and oxygen.
99537. Magnesium combines with oxygen to form magnesium oxide.
99538. Butane burns in air to form carbon dioxide and water vapor and release heat.
99539. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
99540. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99541. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
99542. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
99543. Copper reacts with oxygen in air to form copper(II) oxide.
99544. Carbon reacts with oxygen to form carbon dioxide.
99545. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
99546. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
99547. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
99548. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
99549. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
99550. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
99551. Iron combines with sulfur to form iron sulfide.
99552. Carbon Monoxide burns in air to form carbon dioxide and release heat.
99553. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
99554. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99555. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
99556. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
99557. Lead reacts with oxygen in air to form lead(II) oxide.
99558. Sulfur reacts with oxygen to form sulfur dioxide.
99559. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
99560. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
99561. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
99562. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
99563. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
99564. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
99565. Calcium Oxide combines with water to form calcium hydroxide.
99566. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
99567. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
99568. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99569. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
99570. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
99571. Magnesium reacts with oxygen in air to form magnesium oxide.
99572. Phosphorus reacts with oxygen to form phosphorus pentoxide.
99573. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
99574. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
99575. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
99576. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
99577. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
99578. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
99579. Hydrogen combines with oxygen to form water.
99580. Hydrogen burns in air to form water vapor and release heat.
99581. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
99582. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99583. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
99584. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
99585. Calcium reacts with oxygen in air to form calcium oxide.
99586. Hydrogen reacts with oxygen to form water.
99587. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
99588. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
99589. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
99590. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
99591. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
99592. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
99593. Nitrogen combines with hydrogen to form ammonia.
99594. Methane burns in air to form carbon dioxide and water vapor and release heat.
99595. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
99596. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99597. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
99598. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
99599. Aluminium reacts with oxygen in air to form aluminium oxide.
99600. Nitrogen reacts with oxygen to form nitrogen oxides.
99601. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
99602. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
99603. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
99604. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

99605. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

99606. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

99607. Sulfur combines with oxygen to form sulfur dioxide.

99608. Ethane burns in air to form carbon dioxide and water vapor and release heat.

99609. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

99610. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99611. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.

99612. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

99613. Zinc reacts with oxygen in air to form zinc oxide.

99614. Silicon reacts with oxygen to form silicon dioxide.

99615. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

99616. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

99617. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

99618. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

99619. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

99620. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

99621. Carbon combines with oxygen to form carbon dioxide.

99622. Propane burns in air to form carbon dioxide and water vapor and release heat.

99623. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

99624. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99625. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.

99626. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

99627. Iron reacts with oxygen in air to form iron(III) oxide.

99628. Carbon reacts with oxygen to form carbon dioxide.

99629. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

99630. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

99631. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

99632. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

99633. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

99634. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

99635. Phosphorus combines with oxygen to form phosphorus pentoxide.

99636. Butane burns in air to form carbon dioxide and water vapor and release heat.

99637. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

99638. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99639. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

99640. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

99641. Copper reacts with oxygen in air to form copper(II) oxide.

99642. Sulfur reacts with oxygen to form sulfur dioxide.

99643. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

99644. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

99645. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

99646. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

99647. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

99648. On heating, hydrogen peroxide decomposes to form water and oxygen.

99649. Magnesium combines with oxygen to form magnesium oxide.

99650. Carbon Monoxide burns in air to form carbon dioxide and release heat.

99651. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

99652. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99653. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

99654. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

99655. Lead reacts with oxygen in air to form lead(II) oxide.

99656. Phosphorus reacts with oxygen to form phosphorus pentoxide.

99657. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

99658. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

99659. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

99660. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

99661. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

99662. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

99663. Iron combines with sulfur to form iron sulfide.

99664. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

99665. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

99666. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99667. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

99668. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

99669. Magnesium reacts with oxygen in air to form magnesium oxide.

99670. Hydrogen reacts with oxygen to form water.

99671. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

99672. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

99673. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

99674. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

99675. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

99676. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

99677. Calcium Oxide combines with water to form calcium hydroxide.

99678. Hydrogen burns in air to form water vapor and release heat.

99679. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

99680. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99681. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

99682. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

99683. Calcium reacts with oxygen in air to form calcium oxide.

99684. Nitrogen reacts with oxygen to form nitrogen oxides.

99685. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

99686. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

99687. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

99688. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

99689. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

99690. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

99691. Hydrogen combines with oxygen to form water.

99692. Methane burns in air to form carbon dioxide and water vapor and release heat.

99693. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

99694. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99695. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

99696. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

99697. Aluminium reacts with oxygen in air to form aluminium oxide.
99698. Silicon reacts with oxygen to form silicon dioxide.
99699. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
99700. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
99701. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
99702. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
99703. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
99704. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
99705. Nitrogen combines with hydrogen to form ammonia.
99706. Ethane burns in air to form carbon dioxide and water vapor and release heat.
99707. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
99708. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99709. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
99710. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
99711. Zinc reacts with oxygen in air to form zinc oxide.
99712. Carbon reacts with oxygen to form carbon dioxide.
99713. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
99714. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
99715. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
99716. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
99717. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
99718. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
99719. Sulfur combines with oxygen to form sulfur dioxide.
99720. Propane burns in air to form carbon dioxide and water vapor and release heat.
99721. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
99722. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99723. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
99724. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
99725. Iron reacts with oxygen in air to form iron(III) oxide.
99726. Sulfur reacts with oxygen to form sulfur dioxide.
99727. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
99728. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
99729. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
99730. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
99731. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
99732. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
99733. Carbon combines with oxygen to form carbon dioxide.
99734. Butane burns in air to form carbon dioxide and water vapor and release heat.
99735. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
99736. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99737. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
99738. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
99739. Copper reacts with oxygen in air to form copper(II) oxide.
99740. Phosphorus reacts with oxygen to form phosphorus pentoxide.
99741. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
99742. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
99743. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
99744. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
99745. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
99746. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
99747. Phosphorus combines with oxygen to form phosphorus pentoxide.
99748. Carbon Monoxide burns in air to form carbon dioxide and release heat.
99749. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
99750. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99751. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
99752. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
99753. Lead reacts with oxygen in air to form lead(II) oxide.
99754. Hydrogen reacts with oxygen to form water.
99755. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
99756. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
99757. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
99758. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
99759. Iron(II) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
99760. On heating, hydrogen peroxide decomposes to form water and oxygen.
99761. Magnesium combines with oxygen to form magnesium oxide.
99762. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
99763. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
99764. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99765. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
99766. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
99767. Magnesium reacts with oxygen in air to form magnesium oxide.
99768. Nitrogen reacts with oxygen to form nitrogen oxides.
99769. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
99770. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
99771. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
99772. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
99773. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
99774. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
99775. Iron combines with sulfur to form iron sulfide.
99776. Hydrogen burns in air to form water vapor and release heat.
99777. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
99778. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99779. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
99780. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
99781. Calcium reacts with oxygen in air to form calcium oxide.
99782. Silicon reacts with oxygen to form silicon dioxide.
99783. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
99784. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
99785. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
99786. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
99787. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
99788. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
99789. Calcium Oxide combines with water to form calcium hydroxide.
99790. Methane burns in air to form carbon dioxide and water vapor and release heat.
99791. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

99792. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99793. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
99794. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
99795. Aluminium reacts with oxygen in air to form aluminium oxide.
99796. Carbon reacts with oxygen to form carbon dioxide.
99797. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
99798. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
99799. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
99800. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
99801. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
99802. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
99803. Hydrogen combines with oxygen to form water.
99804. Ethane burns in air to form carbon dioxide and water vapor and release heat.
99805. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
99806. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99807. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
99808. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
99809. Zinc reacts with oxygen in air to form zinc oxide.
99810. Sulfur reacts with oxygen to form sulfur dioxide.
99811. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
99812. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
99813. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
99814. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
99815. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
99816. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
99817. Nitrogen combines with hydrogen to form ammonia.
99818. Propane burns in air to form carbon dioxide and water vapor and release heat.
99819. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
99820. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99821. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
99822. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
99823. Iron reacts with oxygen in air to form iron(III) oxide.
99824. Phosphorus reacts with oxygen to form phosphorus pentoxide.
99825. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
99826. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
99827. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
99828. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
99829. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
99830. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
99831. Sulfur combines with oxygen to form sulfur dioxide.
99832. Butane burns in air to form carbon dioxide and water vapor and release heat.
99833. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
99834. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99835. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
99836. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
99837. Copper reacts with oxygen in air to form copper(II) oxide.
99838. Hydrogen reacts with oxygen to form water.
99839. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
99840. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
99841. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
99842. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
99843. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
99844. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
99845. Carbon combines with oxygen to form carbon dioxide.
99846. Carbon Monoxide burns in air to form carbon dioxide and release heat.
99847. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
99848. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99849. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
99850. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
99851. Lead reacts with oxygen in air to form lead(II) oxide.
99852. Nitrogen reacts with oxygen to form nitrogen oxides.
99853. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
99854. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
99855. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
99856. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
99857. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
99858. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
99859. Phosphorus combines with oxygen to form phosphorus pentoxide.
99860. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
99861. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
99862. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99863. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
99864. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
99865. Magnesium reacts with oxygen in air to form magnesium oxide.
99866. Silicon reacts with oxygen to form silicon dioxide.
99867. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
99868. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
99869. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
99870. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
99871. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
99872. On heating, hydrogen peroxide decomposes to form water and oxygen.
99873. Magnesium combines with oxygen to form magnesium oxide.
99874. Hydrogen burns in air to form water vapor and release heat.
99875. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
99876. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99877. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
99878. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
99879. Calcium reacts with oxygen in air to form calcium oxide.
99880. Carbon reacts with oxygen to form carbon dioxide.
99881. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
99882. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
99883. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

99884. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
99885. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
99886. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
99887. Iron combines with sulfur to form iron sulfide.
99888. Methane burns in air to form carbon dioxide and water vapor and release heat.
99889. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
99890. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99891. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
99892. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
99893. Aluminium reacts with oxygen in air to form aluminium oxide.
99894. Sulfur reacts with oxygen to form sulfur dioxide.
99895. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
99896. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
99897. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
99898. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
99899. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
99900. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
99901. Calcium Oxide combines with water to form calcium hydroxide.
99902. Ethane burns in air to form carbon dioxide and water vapor and release heat.
99903. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
99904. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99905. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
99906. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
99907. Zinc reacts with oxygen in air to form zinc oxide.
99908. Phosphorus reacts with oxygen to form phosphorus pentoxide.
99909. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
99910. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
99911. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
99912. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
99913. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
99914. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
99915. Hydrogen combines with oxygen to form water.
99916. Propane burns in air to form carbon dioxide and water vapor and release heat.
99917. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
99918. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99919. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
99920. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
99921. Iron reacts with oxygen in air to form iron(III) oxide.
99922. Hydrogen reacts with oxygen to form water.
99923. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
99924. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
99925. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
99926. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
99927. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
99928. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
99929. Nitrogen combines with hydrogen to form ammonia.
99930. Butane burns in air to form carbon dioxide and water vapor and release heat.
99931. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
99932. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99933. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
99934. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
99935. Copper reacts with oxygen in air to form copper(II) oxide.
99936. Nitrogen reacts with oxygen to form nitrogen oxides.
99937. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
99938. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
99939. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
99940. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
99941. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
99942. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
99943. Sulfur combines with oxygen to form sulfur dioxide.
99944. Carbon Monoxide burns in air to form carbon dioxide and release heat.
99945. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
99946. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99947. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
99948. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
99949. Lead reacts with oxygen in air to form lead(II) oxide.
99950. Silicon reacts with oxygen to form silicon dioxide.
99951. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
99952. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
99953. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
99954. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
99955. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
99956. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
99957. Carbon combines with oxygen to form carbon dioxide.
99958. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
99959. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
99960. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99961. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
99962. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
99963. Magnesium reacts with oxygen in air to form magnesium oxide.
99964. Carbon reacts with oxygen to form carbon dioxide.
99965. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
99966. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
99967. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
99968. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
99969. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
99970. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
99971. Phosphorus combines with oxygen to form phosphorus pentoxide.
99972. Hydrogen burns in air to form water vapor and release heat.
99973. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
99974. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
99975. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

99976. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

99977. Calcium reacts with oxygen in air to form calcium oxide.

99978. Sulfur reacts with oxygen to form sulfur dioxide.

99979. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

99980. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

99981. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

99982. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

99983. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

99984. On heating, hydrogen peroxide decomposes to form water and oxygen.

99985. Magnesium combines with oxygen to form magnesium oxide.

99986. Methane burns in air to form carbon dioxide and water vapor and release heat.

99987. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

99988. Copper(I) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

99989. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

99990. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

99991. Aluminium reacts with oxygen in air to form aluminium oxide.

99992. Phosphorus reacts with oxygen to form phosphorus pentoxide.

99993. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

99994. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

99995. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

99996. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

99997. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

99998. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

99999. Iron combines with sulfur to form iron sulfide.

100000. Ethane burns in air to form carbon dioxide and water vapor and release heat.

100001. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

100002. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100003. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

100004. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

100005. Zinc reacts with oxygen in air to form zinc oxide.

100006. Hydrogen reacts with oxygen to form water.

100007. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

100008. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

100009. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

100010. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

100011. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

100012. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

100013. Calcium Oxide combines with water to form calcium hydroxide.

100014. Propane burns in air to form carbon dioxide and water vapor and release heat.

100015. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

100016. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100017. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

100018. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

100019. Iron reacts with oxygen in air to form iron(III) oxide.

100020. Nitrogen reacts with oxygen to form nitrogen oxides.

100021. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

100022. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

100023. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

100024. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

100025. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

100026. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

100027. Hydrogen combines with oxygen to form water.

100028. Butane burns in air to form carbon dioxide and water vapor and release heat.

100029. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

100030. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100031. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

100032. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

100033. Copper reacts with oxygen in air to form copper(II) oxide.

100034. Silicon reacts with oxygen to form silicon dioxide.

100035. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

100036. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

100037. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

100038. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

100039. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

100040. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

100041. Nitrogen combines with hydrogen to form ammonia.

100042. Carbon Monoxide burns in air to form carbon dioxide and release heat.

100043. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

100044. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100045. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

100046. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

100047. Lead reacts with oxygen in air to form lead(II) oxide.

100048. Carbon reacts with oxygen to form carbon dioxide.

100049. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

100050. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

100051. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

100052. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

100053. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

100054. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

100055. Sulfur combines with oxygen to form sulfur dioxide.

100056. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

100057. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

100058. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100059. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

100060. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

100061. Magnesium reacts with oxygen in air to form magnesium oxide.

100062. Sulfur reacts with oxygen to form sulfur dioxide.

100063. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

100064. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

100065. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

100066. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

100067. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

100068. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
100069. Carbon combines with oxygen to form carbon dioxide.
100070. Hydrogen burns in air to form water vapor and release heat.
100071. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
100072. Copper(I) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100073. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
100074. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
100075. Calcium reacts with oxygen in air to form calcium oxide.
100076. Phosphorus reacts with oxygen to form phosphorus pentoxide.
100077. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
100078. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
100079. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
100080. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
100081. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
100082. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
100083. Phosphorus combines with oxygen to form phosphorus pentoxide.
100084. Methane burns in air to form carbon dioxide and water vapor and release heat.
100085. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
100086. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100087. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
100088. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
100089. Aluminium reacts with oxygen in air to form aluminium oxide.
100090. Hydrogen reacts with oxygen to form water.
100091. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
100092. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
100093. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
100094. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
100095. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
100096. On heating, hydrogen peroxide decomposes to form water and oxygen.
100097. Magnesium combines with oxygen to form magnesium oxide.
100098. Ethane burns in air to form carbon dioxide and water vapor and release heat.
100099. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
100100. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100101. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
100102. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
100103. Zinc reacts with oxygen in air to form zinc oxide.
100104. Nitrogen reacts with oxygen to form nitrogen oxides.
100105. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
100106. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
100107. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
100108. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
100109. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
100110. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
100111. Iron combines with sulfur to form iron sulfide.
100112. Propane burns in air to form carbon dioxide and water vapor and release heat.
100113. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
100114. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100115. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
100116. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
100117. Iron reacts with oxygen in air to form iron(III) oxide.
100118. Silicon reacts with oxygen to form silicon dioxide.
100119. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
100120. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
100121. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
100122. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
100123. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
100124. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
100125. Calcium Oxide combines with water to form calcium hydroxide.
100126. Butane burns in air to form carbon dioxide and water vapor and release heat.
100127. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
100128. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100129. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
100130. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
100131. Copper reacts with oxygen in air to form copper(II) oxide.
100132. Carbon reacts with oxygen to form carbon dioxide.
100133. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
100134. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
100135. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
100136. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
100137. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
100138. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
100139. Hydrogen combines with oxygen to form water.
100140. Carbon Monoxide burns in air to form carbon dioxide and release heat.
100141. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
100142. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100143. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
100144. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
100145. Lead reacts with oxygen in air to form lead(II) oxide.
100146. Sulfur reacts with oxygen to form sulfur dioxide.
100147. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
100148. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
100149. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
100150. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
100151. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
100152. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
100153. Nitrogen combines with hydrogen to form ammonia.
100154. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
100155. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
100156. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100157. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
100158. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
100159. Magnesium reacts with oxygen in air to form magnesium oxide.

100160. Phosphorus reacts with oxygen to form phosphorus pentoxide.
100161. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
100162. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
100163. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
100164. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
100165. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
100166. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
100167. Sulfur combines with oxygen to form sulfur dioxide.
100168. Hydrogen burns in air to form water vapor and release heat.
100169. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
100170. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100171. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
100172. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
100173. Calcium reacts with oxygen in air to form calcium oxide.
100174. Hydrogen reacts with oxygen to form water.
100175. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
100176. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
100177. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
100178. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
100179. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
100180. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
100181. Carbon combines with oxygen to form carbon dioxide.
100182. Methane burns in air to form carbon dioxide and water vapor and release heat.
100183. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
100184. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100185. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
100186. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
100187. Aluminium reacts with oxygen in air to form aluminium oxide.
100188. Nitrogen reacts with oxygen to form nitrogen oxides.
100189. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
100190. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
100191. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
100192. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
100193. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
100194. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
100195. Phosphorus combines with oxygen to form phosphorus pentoxide.
100196. Ethane burns in air to form carbon dioxide and water vapor and release heat.
100197. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
100198. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100199. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
100200. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
100201. Zinc reacts with oxygen in air to form zinc oxide.
100202. Silicon reacts with oxygen to form silicon dioxide.
100203. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
100204. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
100205. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
100206. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
100207. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
100208. On heating, hydrogen peroxide decomposes to form water and oxygen.
100209. Magnesium combines with oxygen to form magnesium oxide.
100210. Propane burns in air to form carbon dioxide and water vapor and release heat.
100211. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
100212. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100213. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
100214. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
100215. Iron reacts with oxygen in air to form iron(III) oxide.
100216. Carbon reacts with oxygen to form carbon dioxide.
100217. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
100218. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
100219. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
100220. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
100221. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
100222. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
100223. Iron combines with sulfur to form iron sulfide.
100224. Butane burns in air to form carbon dioxide and water vapor and release heat.
100225. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
100226. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100227. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
100228. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
100229. Copper reacts with oxygen in air to form copper(II) oxide.
100230. Sulfur reacts with oxygen to form sulfur dioxide.
100231. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
100232. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
100233. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
100234. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
100235. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
100236. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
100237. Calcium Oxide combines with water to form calcium hydroxide.
100238. Carbon Monoxide burns in air to form carbon dioxide and release heat.
100239. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
100240. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100241. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
100242. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
100243. Lead reacts with oxygen in air to form lead(II) oxide.
100244. Phosphorus reacts with oxygen to form phosphorus pentoxide.
100245. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
100246. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
100247. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
100248. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
100249. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
100250. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
100251. Hydrogen combines with oxygen to form water.

100252. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

100253. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

100254. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100255. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

100256. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

100257. Magnesium reacts with oxygen in air to form magnesium oxide.

100258. Hydrogen reacts with oxygen to form water.

100259. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

100260. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

100261. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

100262. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

100263. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

100264. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

100265. Nitrogen combines with hydrogen to form ammonia.

100266. Hydrogen burns in air to form water vapor and release heat.

100267. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

100268. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100269. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

100270. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

100271. Calcium reacts with oxygen in air to form calcium oxide.

100272. Nitrogen reacts with oxygen to form nitrogen oxides.

100273. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

100274. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

100275. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

100276. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

100277. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

100278. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

100279. Sulfur combines with oxygen to form sulfur dioxide.

100280. Methane burns in air to form carbon dioxide and water vapor and release heat.

100281. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

100282. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100283. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.

100284. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

100285. Aluminium reacts with oxygen in air to form aluminium oxide.

100286. Silicon reacts with oxygen to form silicon dioxide.

100287. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

100288. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

100289. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

100290. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

100291. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

100292. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

100293. Carbon combines with oxygen to form carbon dioxide.

100294. Ethane burns in air to form carbon dioxide and water vapor and release heat.

100295. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

100296. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100297. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.

100298. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

100299. Zinc reacts with oxygen in air to form zinc oxide.

100300. Carbon reacts with oxygen to form carbon dioxide.

100301. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

100302. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

100303. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

100304. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

100305. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

100306. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

100307. Phosphorus combines with oxygen to form phosphorus pentoxide.

100308. Propane burns in air to form carbon dioxide and water vapor and release heat.

100309. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

100310. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100311. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

100312. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

100313. Iron reacts with oxygen in air to form iron(III) oxide.

100314. Sulfur reacts with oxygen to form sulfur dioxide.

100315. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

100316. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

100317. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

100318. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

100319. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

100320. On heating, hydrogen peroxide decomposes to form water and oxygen.

100321. Magnesium combines with oxygen to form magnesium oxide.

100322. Butane burns in air to form carbon dioxide and water vapor and release heat.

100323. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

100324. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100325. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

100326. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

100327. Copper reacts with oxygen in air to form copper(II) oxide.

100328. Phosphorus reacts with oxygen to form phosphorus pentoxide.

100329. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

100330. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

100331. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

100332. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

100333. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

100334. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

100335. Iron combines with sulfur to form iron sulfide.

100336. Carbon Monoxide burns in air to form carbon dioxide and release heat.

100337. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

100338. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100339. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

100340. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

100341. Lead reacts with oxygen in air to form lead(II) oxide.

100342. Hydrogen reacts with oxygen to form water.

100343. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
100344. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
100345. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
100346. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
100347. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
100348. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
100349. Calcium Oxide combines with water to form calcium hydroxide.
100350. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
100351. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
100352. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100353. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
100354. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
100355. Magnesium reacts with oxygen in air to form magnesium oxide.
100356. Nitrogen reacts with oxygen to form nitrogen oxides.
100357. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
100358. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
100359. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
100360. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
100361. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
100362. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
100363. Hydrogen combines with oxygen to form water.
100364. Hydrogen burns in air to form water vapor and release heat.
100365. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
100366. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100367. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
100368. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
100369. Calcium reacts with oxygen in air to form calcium oxide.
100370. Silicon reacts with oxygen to form silicon dioxide.
100371. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
100372. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
100373. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
100374. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
100375. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
100376. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
100377. Nitrogen combines with hydrogen to form ammonia.
100378. Methane burns in air to form carbon dioxide and water vapor and release heat.
100379. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
100380. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100381. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
100382. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
100383. Aluminium reacts with oxygen in air to form aluminium oxide.
100384. Carbon reacts with oxygen to form carbon dioxide.
100385. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
100386. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
100387. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
100388. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
100389. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
100390. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
100391. Sulfur combines with oxygen to form sulfur dioxide.
100392. Ethane burns in air to form carbon dioxide and water vapor and release heat.
100393. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
100394. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100395. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
100396. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
100397. Zinc reacts with oxygen in air to form zinc oxide.
100398. Sulfur reacts with oxygen to form sulfur dioxide.
100399. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
100400. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
100401. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
100402. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
100403. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
100404. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
100405. Carbon combines with oxygen to form carbon dioxide.
100406. Propane burns in air to form carbon dioxide and water vapor and release heat.
100407. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
100408. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100409. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
100410. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
100411. Iron reacts with oxygen in air to form iron(III) oxide.
100412. Phosphorus reacts with oxygen to form phosphorus pentoxide.
100413. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
100414. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
100415. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
100416. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
100417. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
100418. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
100419. Phosphorus combines with oxygen to form phosphorus pentoxide.
100420. Butane burns in air to form carbon dioxide and water vapor and release heat.
100421. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
100422. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100423. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
100424. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
100425. Copper reacts with oxygen in air to form copper(II) oxide.
100426. Hydrogen reacts with oxygen to form water.
100427. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
100428. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
100429. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
100430. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
100431. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
100432. On heating, hydrogen peroxide decomposes to form water and oxygen.
100433. Magnesium combines with oxygen to form magnesium oxide.

100434. Carbon Monoxide burns in air to form carbon dioxide and release heat.
100435. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
100436. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100437. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
100438. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
100439. Lead reacts with oxygen in air to form lead(II) oxide.
100440. Nitrogen reacts with oxygen to form nitrogen oxides.
100441. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
100442. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
100443. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
100444. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
100445. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
100446. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
100447. Iron combines with sulfur to form iron sulfide.
100448. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
100449. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
100450. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100451. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
100452. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
100453. Magnesium reacts with oxygen in air to form magnesium oxide.
100454. Silicon reacts with oxygen to form silicon dioxide.
100455. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
100456. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
100457. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
100458. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
100459. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
100460. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
100461. Calcium Oxide combines with water to form calcium hydroxide.
100462. Hydrogen burns in air to form water vapor and release heat.
100463. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
100464. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100465. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
100466. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
100467. Calcium reacts with oxygen in air to form calcium oxide.
100468. Carbon reacts with oxygen to form carbon dioxide.
100469. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
100470. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
100471. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
100472. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
100473. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
100474. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
100475. Hydrogen combines with oxygen to form water.
100476. Methane burns in air to form carbon dioxide and water vapor and release heat.
100477. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
100478. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100479. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
100480. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
100481. Aluminium reacts with oxygen in air to form aluminium oxide.
100482. Sulfur reacts with oxygen to form sulfur dioxide.
100483. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
100484. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
100485. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
100486. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
100487. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
100488. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
100489. Nitrogen combines with hydrogen to form ammonia.
100490. Ethane burns in air to form carbon dioxide and water vapor and release heat.
100491. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
100492. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100493. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
100494. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
100495. Zinc reacts with oxygen in air to form zinc oxide.
100496. Phosphorus reacts with oxygen to form phosphorus pentoxide.
100497. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
100498. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
100499. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
100500. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
100501. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
100502. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
100503. Sulfur combines with oxygen to form sulfur dioxide.
100504. Propane burns in air to form carbon dioxide and water vapor and release heat.
100505. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
100506. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100507. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
100508. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
100509. Iron reacts with oxygen in air to form iron(III) oxide.
100510. Hydrogen reacts with oxygen to form water.
100511. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
100512. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
100513. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
100514. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
100515. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
100516. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
100517. Carbon combines with oxygen to form carbon dioxide.
100518. Butane burns in air to form carbon dioxide and water vapor and release heat.
100519. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
100520. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100521. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
100522. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
100523. Copper reacts with oxygen in air to form copper(II) oxide.
100524. Nitrogen reacts with oxygen to form nitrogen oxides.
100525. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

100526. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

100527. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

100528. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

100529. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

100530. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

100531. Phosphorus combines with oxygen to form phosphorus pentoxide.

100532. Carbon Monoxide burns in air to form carbon dioxide and release heat.

100533. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

100534. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100535. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.

100536. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

100537. Lead reacts with oxygen in air to form lead(II) oxide.

100538. Silicon reacts with oxygen to form silicon dioxide.

100539. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

100540. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

100541. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

100542. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

100543. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

100544. On heating, hydrogen peroxide decomposes to form water and oxygen.

100545. Magnesium combines with oxygen to form magnesium oxide.

100546. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

100547. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

100548. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100549. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.

100550. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

100551. Magnesium reacts with oxygen in air to form magnesium oxide.

100552. Carbon reacts with oxygen to form carbon dioxide.

100553. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

100554. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

100555. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

100556. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

100557. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

100558. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

100559. Iron combines with sulfur to form iron sulfide.

100560. Hydrogen burns in air to form water vapor and release heat.

100561. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

100562. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100563. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.

100564. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

100565. Calcium reacts with oxygen in air to form calcium oxide.

100566. Sulfur reacts with oxygen to form sulfur dioxide.

100567. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

100568. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

100569. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

100570. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

100571. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

100572. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

100573. Calcium Oxide combines with water to form calcium hydroxide.

100574. Methane burns in air to form carbon dioxide and water vapor and release heat.

100575. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

100576. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100577. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

100578. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

100579. Aluminium reacts with oxygen in air to form aluminium oxide.

100580. Phosphorus reacts with oxygen to form phosphorus pentoxide.

100581. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

100582. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

100583. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

100584. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

100585. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

100586. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

100587. Hydrogen combines with oxygen to form water.

100588. Ethane burns in air to form carbon dioxide and water vapor and release heat.

100589. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

100590. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100591. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

100592. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

100593. Zinc reacts with oxygen in air to form zinc oxide.

100594. Hydrogen reacts with oxygen to form water.

100595. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

100596. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

100597. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

100598. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

100599. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

100600. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

100601. Nitrogen combines with hydrogen to form ammonia.

100602. Propane burns in air to form carbon dioxide and water vapor and release heat.

100603. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

100604. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100605. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

100606. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

100607. Iron reacts with oxygen in air to form iron(III) oxide.

100608. Nitrogen reacts with oxygen to form nitrogen oxides.

100609. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

100610. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

100611. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

100612. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

100613. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

100614. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

100615. Sulfur combines with oxygen to form sulfur dioxide.

100616. Butane burns in air to form carbon dioxide and water vapor and release heat.

100617. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
100618. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100619. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
100620. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
100621. Copper reacts with oxygen in air to form copper(II) oxide.
100622. Silicon reacts with oxygen to form silicon dioxide.
100623. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
100624. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
100625. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
100626. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
100627. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
100628. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
100629. Carbon combines with oxygen to form carbon dioxide.
100630. Carbon Monoxide burns in air to form carbon dioxide and release heat.
100631. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
100632. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100633. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
100634. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
100635. Lead reacts with oxygen in air to form lead(II) oxide.
100636. Carbon reacts with oxygen to form carbon dioxide.
100637. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
100638. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
100639. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
100640. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
100641. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
100642. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
100643. Phosphorus combines with oxygen to form phosphorus pentoxide.
100644. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
100645. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
100646. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100647. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
100648. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
100649. Magnesium reacts with oxygen in air to form magnesium oxide.
100650. Sulfur reacts with oxygen to form sulfur dioxide.
100651. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
100652. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
100653. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
100654. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
100655. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
100656. On heating, hydrogen peroxide decomposes to form water and oxygen.
100657. Magnesium combines with oxygen to form magnesium oxide.
100658. Hydrogen burns in air to form water vapor and release heat.
100659. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
100660. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100661. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
100662. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
100663. Calcium reacts with oxygen in air to form calcium oxide.
100664. Phosphorus reacts with oxygen to form phosphorus pentoxide.
100665. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
100666. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
100667. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
100668. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
100669. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
100670. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
100671. Iron combines with sulfur to form iron sulfide.
100672. Methane burns in air to form carbon dioxide and water vapor and release heat.
100673. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
100674. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100675. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
100676. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
100677. Aluminium reacts with oxygen in air to form aluminium oxide.
100678. Hydrogen reacts with oxygen to form water.
100679. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
100680. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
100681. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
100682. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
100683. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
100684. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
100685. Calcium Oxide combines with water to form calcium hydroxide.
100686. Ethane burns in air to form carbon dioxide and water vapor and release heat.
100687. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
100688. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100689. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
100690. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
100691. Zinc reacts with oxygen in air to form zinc oxide.
100692. Nitrogen reacts with oxygen to form nitrogen oxides.
100693. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
100694. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
100695. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
100696. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
100697. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
100698. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
100699. Propane combines with oxygen to form water.
100700. Propane burns in air to form carbon dioxide and water vapor and release heat.
100701. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
100702. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100703. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
100704. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
100705. Iron reacts with oxygen in air to form iron(III) oxide.
100706. Silicon reacts with oxygen to form silicon dioxide.
100707. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
100708. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

100709. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
100710. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
100711. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
100712. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
100713. Nitrogen combines with hydrogen to form ammonia.
100714. Butane burns in air to form carbon dioxide and water vapor and release heat.
100715. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
100716. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100717. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
100718. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
100719. Copper reacts with oxygen in air to form copper(II) oxide.
100720. Carbon reacts with oxygen to form carbon dioxide.
100721. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
100722. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
100723. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
100724. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
100725. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
100726. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
100727. Sulfur combines with oxygen to form sulfur dioxide.
100728. Carbon Monoxide burns in air to form carbon dioxide and release heat.
100729. Copper(I) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
100730. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100731. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
100732. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
100733. Lead reacts with oxygen in air to form lead(II) oxide.
100734. Sulfur reacts with oxygen to form sulfur dioxide.
100735. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
100736. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
100737. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
100738. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
100739. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
100740. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
100741. Carbon combines with oxygen to form carbon dioxide.
100742. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
100743. Copper(I) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
100744. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100745. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
100746. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
100747. Magnesium reacts with oxygen in air to form magnesium oxide.
100748. Phosphorus reacts with oxygen to form phosphorus pentoxide.
100749. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
100750. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
100751. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
100752. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
100753. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
100754. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
100755. Phosphorus combines with oxygen to form phosphorus pentoxide.
100756. Hydrogen burns in air to form water vapor and release heat.
100757. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
100758. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100759. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
100760. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
100761. Calcium reacts with oxygen in air to form calcium oxide.
100762. Hydrogen reacts with oxygen to form water.
100763. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
100764. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
100765. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
100766. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
100767. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
100768. On heating, hydrogen peroxide decomposes to form water and oxygen.
100769. Magnesium combines with oxygen to form magnesium oxide.
100770. Methane burns in air to form carbon dioxide and water vapor and release heat.
100771. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
100772. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100773. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
100774. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
100775. Aluminium reacts with oxygen in air to form aluminium oxide.
100776. Nitrogen reacts with oxygen to form nitrogen oxides.
100777. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
100778. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
100779. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
100780. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
100781. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
100782. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
100783. Iron combines with sulfur to form iron sulfide.
100784. Ethane burns in air to form carbon dioxide and water vapor and release heat.
100785. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
100786. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100787. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
100788. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
100789. Zinc reacts with oxygen in air to form zinc oxide.
100790. Silicon reacts with oxygen to form silicon dioxide.
100791. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
100792. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
100793. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
100794. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
100795. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
100796. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
100797. Calcium Oxide combines with water to form calcium hydroxide.
100798. Propane burns in air to form carbon dioxide and water vapor and release heat.
100799. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
100800. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100801. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
100802. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
100803. Iron reacts with oxygen in air to form iron(III) oxide.
100804. Carbon reacts with oxygen to form carbon dioxide.
100805. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
100806. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
100807. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
100808. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
100809. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
100810. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
100811. Hydrogen combines with oxygen to form water.
100812. Butane burns in air to form carbon dioxide and water vapor and release heat.
100813. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
100814. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100815. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
100816. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
100817. Copper reacts with oxygen in air to form copper(II) oxide.
100818. Sulfur reacts with oxygen to form sulfur dioxide.
100819. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
100820. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
100821. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
100822. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
100823. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
100824. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
100825. Nitrogen combines with hydrogen to form ammonia.
100826. Carbon Monoxide burns in air to form carbon dioxide and release heat.
100827. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
100828. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100829. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
100830. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
100831. Lead reacts with oxygen in air to form lead(II) oxide.
100832. Phosphorus reacts with oxygen to form phosphorus pentoxide.
100833. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
100834. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
100835. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
100836. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
100837. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
100838. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
100839. Sulfur combines with oxygen to form sulfur dioxide.
100840. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
100841. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
100842. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100843. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
100844. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
100845. Magnesium reacts with oxygen in air to form magnesium oxide.
100846. Hydrogen reacts with oxygen to form water.
100847. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
100848. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
100849. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
100850. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
100851. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
100852. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
100853. Carbon combines with oxygen to form carbon dioxide.
100854. Hydrogen burns in air to form water vapor and release heat.
100855. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
100856. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100857. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
100858. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
100859. Calcium reacts with oxygen in air to form calcium oxide.
100860. Nitrogen reacts with oxygen to form nitrogen oxides.
100861. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
100862. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
100863. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
100864. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
100865. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
100866. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
100867. Phosphorus combines with oxygen to form phosphorus pentoxide.
100868. Methane burns in air to form carbon dioxide and water vapor and release heat.
100869. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
100870. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100871. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
100872. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
100873. Aluminium reacts with oxygen in air to form aluminium oxide.
100874. Silicon reacts with oxygen to form silicon dioxide.
100875. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
100876. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
100877. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
100878. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
100879. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
100880. On heating, hydrogen peroxide decomposes to form water and oxygen.
100881. Magnesium combines with oxygen to form magnesium oxide.
100882. Ethane burns in air to form carbon dioxide and water vapor and release heat.
100883. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
100884. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100885. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
100886. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
100887. Zinc reacts with oxygen in air to form zinc oxide.
100888. Carbon reacts with oxygen to form carbon dioxide.
100889. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
100890. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
100891. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

100892. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
100893. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
100894. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
100895. Iron combines with sulfur to form iron sulfide.
100896. Propane burns in air to form carbon dioxide and water vapor and release heat.
100897. Copper(I) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
100898. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100899. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
100900. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
100901. Iron reacts with oxygen in air to form iron(III) oxide.
100902. Sulfur reacts with oxygen to form sulfur dioxide.
100903. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
100904. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
100905. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
100906. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
100907. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
100908. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
100909. Calcium Oxide combines with water to form calcium hydroxide.
100910. Butane burns in air to form carbon dioxide and water vapor and release heat.
100911. Copper(I) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
100912. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100913. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
100914. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
100915. Copper reacts with oxygen in air to form copper(II) oxide.
100916. Phosphorus reacts with oxygen to form phosphorus pentoxide.
100917. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
100918. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
100919. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
100920. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
100921. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
100922. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
100923. Hydrogen combines with oxygen to form water.
100924. Carbon Monoxide burns in air to form carbon dioxide and release heat.
100925. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
100926. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100927. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
100928. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
100929. Lead reacts with oxygen in air to form lead(II) oxide.
100930. Hydrogen reacts with oxygen to form water.
100931. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
100932. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
100933. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
100934. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
100935. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
100936. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
100937. Nitrogen combines with hydrogen to form ammonia.
100938. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
100939. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
100940. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100941. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
100942. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
100943. Magnesium reacts with oxygen in air to form magnesium oxide.
100944. Nitrogen reacts with oxygen to form nitrogen oxides.
100945. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
100946. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
100947. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
100948. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
100949. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
100950. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
100951. Sulfur combines with oxygen to form sulfur dioxide.
100952. Hydrogen burns in air to form water vapor and release heat.
100953. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
100954. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100955. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
100956. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
100957. Calcium reacts with oxygen in air to form calcium oxide.
100958. Silicon reacts with oxygen to form silicon dioxide.
100959. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
100960. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
100961. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
100962. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
100963. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
100964. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
100965. Carbon combines with oxygen to form carbon dioxide.
100966. Methane burns in air to form carbon dioxide and water vapor and release heat.
100967. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
100968. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100969. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
100970. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
100971. Aluminium reacts with oxygen in air to form aluminium oxide.
100972. Carbon reacts with oxygen to form carbon dioxide.
100973. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
100974. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
100975. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
100976. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
100977. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
100978. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
100979. Phosphorus combines with oxygen to form phosphorus pentoxide.
100980. Ethane burns in air to form carbon dioxide and water vapor and release heat.
100981. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
100982. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

100983. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
100984. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
100985. Zinc reacts with oxygen in air to form zinc oxide.
100986. Sulfur reacts with oxygen to form sulfur dioxide.
100987. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
100988. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
100989. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
100990. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
100991. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
100992. On heating, hydrogen peroxide decomposes to form water and oxygen.
100993. Magnesium combines with oxygen to form magnesium oxide.
100994. Propane burns in air to form carbon dioxide and water vapor and release heat.
100995. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
100996. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
100997. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
100998. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
100999. Iron reacts with oxygen in air to form iron(III) oxide.
101000. Phosphorus reacts with oxygen to form phosphorus pentoxide.
101001. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
101002. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
101003. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
101004. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
101005. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
101006. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
101007. Iron combines with sulfur to form iron sulfide.
101008. Butane burns in air to form carbon dioxide and water vapor and release heat.
101009. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
101010. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101011. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
101012. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
101013. Copper reacts with oxygen in air to form copper(II) oxide.
101014. Hydrogen reacts with oxygen to form water.
101015. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
101016. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
101017. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
101018. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
101019. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
101020. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
101021. Calcium Oxide combines with water to form calcium hydroxide.
101022. Carbon Monoxide burns in air to form carbon dioxide and release heat.
101023. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
101024. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101025. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
101026. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
101027. Lead reacts with oxygen in air to form lead(II) oxide.
101028. Nitrogen reacts with oxygen to form nitrogen oxides.
101029. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
101030. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
101031. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
101032. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
101033. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
101034. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
101035. Hydrogen combines with oxygen to form water.
101036. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
101037. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
101038. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101039. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
101040. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
101041. Magnesium reacts with oxygen in air to form magnesium oxide.
101042. Silicon reacts with oxygen to form silicon dioxide.
101043. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
101044. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
101045. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
101046. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
101047. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
101048. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
101049. Nitrogen combines with hydrogen to form ammonia.
101050. Hydrogen burns in air to form water vapor and release heat.
101051. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
101052. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101053. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
101054. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
101055. Calcium reacts with oxygen in air to form calcium oxide.
101056. Carbon reacts with oxygen to form carbon dioxide.
101057. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
101058. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
101059. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
101060. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
101061. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
101062. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
101063. Sulfur combines with oxygen to form sulfur dioxide.
101064. Methane burns in air to form carbon dioxide and water vapor and release heat.
101065. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
101066. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101067. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
101068. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
101069. Aluminium reacts with oxygen in air to form aluminium oxide.
101070. Sulfur reacts with oxygen to form sulfur dioxide.
101071. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
101072. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
101073. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
101074. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

101075. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
101076. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
101077. Carbon combines with oxygen to form carbon dioxide.
101078. Ethane burns in air to form carbon dioxide and water vapor and release heat.
101079. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
101080. Copper(I) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101081. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
101082. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
101083. Zinc reacts with oxygen in air to form zinc oxide.
101084. Phosphorus reacts with oxygen to form phosphorus pentoxide.
101085. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
101086. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
101087. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
101088. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
101089. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
101090. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
101091. Phosphorus combines with oxygen to form phosphorus pentoxide.
101092. Propane burns in air to form carbon dioxide and water vapor and release heat.
101093. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
101094. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101095. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
101096. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
101097. Iron reacts with oxygen in air to form iron(III) oxide.
101098. Hydrogen reacts with oxygen to form water.
101099. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
101100. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
101101. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
101102. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
101103. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
101104. On heating, hydrogen peroxide decomposes to form water and oxygen.
101105. Magnesium combines with oxygen to form magnesium oxide.
101106. Butane burns in air to form carbon dioxide and water vapor and release heat.
101107. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
101108. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101109. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
101110. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
101111. Copper reacts with oxygen in air to form copper(II) oxide.
101112. Nitrogen reacts with oxygen to form nitrogen oxides.
101113. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
101114. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
101115. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
101116. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
101117. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
101118. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
101119. Iron combines with sulfur to form iron sulfide.
101120. Carbon Monoxide burns in air to form carbon dioxide and release heat.
101121. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
101122. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101123. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
101124. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
101125. Lead reacts with oxygen in air to form lead(II) oxide.
101126. Silicon reacts with oxygen to form silicon dioxide.
101127. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
101128. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
101129. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
101130. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
101131. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
101132. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
101133. Calcium Oxide combines with water to form calcium hydroxide.
101134. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
101135. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
101136. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101137. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
101138. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
101139. Magnesium reacts with oxygen in air to form magnesium oxide.
101140. Carbon reacts with oxygen to form carbon dioxide.
101141. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
101142. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
101143. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
101144. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
101145. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
101146. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
101147. Hydrogen combines with oxygen to form water.
101148. Hydrogen burns in air to form water vapor and release heat.
101149. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
101150. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101151. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
101152. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
101153. Calcium reacts with oxygen in air to form calcium oxide.
101154. Sulfur reacts with oxygen to form sulfur dioxide.
101155. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
101156. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
101157. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
101158. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
101159. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
101160. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
101161. Nitrogen combines with hydrogen to form ammonia.
101162. Methane burns in air to form carbon dioxide and water vapor and release heat.
101163. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
101164. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101165. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
101166. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

101167. Aluminium reacts with oxygen in air to form aluminium oxide.
101168. Phosphorus reacts with oxygen to form phosphorus pentoxide.
101169. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
101170. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
101171. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
101172. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
101173. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
101174. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
101175. Sulfur combines with oxygen to form sulfur dioxide.
101176. Ethane burns in air to form carbon dioxide and water vapor and release heat.
101177. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
101178. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101179. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
101180. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
101181. Zinc reacts with oxygen in air to form zinc oxide.
101182. Hydrogen reacts with oxygen to form water.
101183. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
101184. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
101185. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
101186. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
101187. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
101188. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
101189. Carbon combines with oxygen to form carbon dioxide.
101190. Propane burns in air to form carbon dioxide and water vapor and release heat.
101191. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
101192. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101193. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
101194. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
101195. Iron reacts with oxygen in air to form iron(III) oxide.
101196. Nitrogen reacts with oxygen to form nitrogen oxides.
101197. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
101198. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
101199. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
101200. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
101201. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
101202. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
101203. Phosphorus combines with oxygen to form phosphorus pentoxide.
101204. Butane burns in air to form carbon dioxide and water vapor and release heat.
101205. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
101206. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101207. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
101208. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
101209. Copper reacts with oxygen in air to form copper(II) oxide.
101210. Silicon reacts with oxygen to form silicon dioxide.
101211. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
101212. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
101213. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
101214. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
101215. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
101216. On heating, hydrogen peroxide decomposes to form water and oxygen.
101217. Magnesium combines with oxygen to form magnesium oxide.
101218. Carbon Monoxide burns in air to form carbon dioxide and release heat.
101219. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
101220. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101221. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
101222. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
101223. Lead reacts with oxygen in air to form lead(II) oxide.
101224. Carbon reacts with oxygen to form carbon dioxide.
101225. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
101226. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
101227. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
101228. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
101229. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
101230. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
101231. Iron combines with sulfur to form iron sulfide.
101232. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
101233. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
101234. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101235. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
101236. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
101237. Magnesium reacts with oxygen in air to form magnesium oxide.
101238. Sulfur reacts with oxygen to form sulfur dioxide.
101239. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
101240. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
101241. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
101242. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
101243. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
101244. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
101245. Calcium Oxide combines with water to form calcium hydroxide.
101246. Hydrogen burns in air to form water vapor and release heat.
101247. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
101248. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101249. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
101250. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
101251. Calcium reacts with oxygen in air to form calcium oxide.
101252. Phosphorus reacts with oxygen to form phosphorus pentoxide.
101253. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
101254. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
101255. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
101256. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
101257. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
101258. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

101259. Hydrogen combines with oxygen to form water.
101260. Methane burns in air to form carbon dioxide and water vapor and release heat.
101261. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
101262. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101263. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
101264. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
101265. Aluminium reacts with oxygen in air to form aluminium oxide.
101266. Hydrogen reacts with oxygen to form water.
101267. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
101268. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
101269. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
101270. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
101271. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
101272. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
101273. Nitrogen combines with hydrogen to form ammonia.
101274. Ethane burns in air to form carbon dioxide and water vapor and release heat.
101275. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
101276. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101277. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
101278. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
101279. Zinc reacts with oxygen in air to form zinc oxide.
101280. Nitrogen reacts with oxygen to form nitrogen oxides.
101281. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
101282. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
101283. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
101284. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
101285. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
101286. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
101287. Sulfur combines with oxygen to form sulfur dioxide.
101288. Propane burns in air to form carbon dioxide and water vapor and release heat.
101289. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
101290. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101291. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
101292. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
101293. Iron reacts with oxygen in air to form iron(III) oxide.
101294. Silicon reacts with oxygen to form silicon dioxide.
101295. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
101296. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
101297. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
101298. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
101299. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
101300. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
101301. Carbon combines with oxygen to form carbon dioxide.
101302. Butane burns in air to form carbon dioxide and water vapor and release heat.
101303. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
101304. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101305. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
101306. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
101307. Copper reacts with oxygen in air to form copper(II) oxide.
101308. Carbon reacts with oxygen to form carbon dioxide.
101309. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
101310. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
101311. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
101312. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
101313. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
101314. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
101315. Phosphorus combines with oxygen to form phosphorus pentoxide.
101316. Carbon Monoxide burns in air to form carbon dioxide and release heat.
101317. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
101318. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101319. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
101320. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
101321. Lead reacts with oxygen in air to form lead(II) oxide.
101322. Sulfur reacts with oxygen to form sulfur dioxide.
101323. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
101324. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
101325. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
101326. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
101327. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
101328. On heating, hydrogen peroxide decomposes to form water and oxygen.
101329. Magnesium combines with oxygen to form magnesium oxide.
101330. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
101331. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
101332. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101333. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
101334. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
101335. Magnesium reacts with oxygen in air to form magnesium oxide.
101336. Phosphorus reacts with oxygen to form phosphorus pentoxide.
101337. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
101338. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
101339. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
101340. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
101341. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
101342. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
101343. Iron combines with sulfur to form iron sulfide.
101344. Hydrogen burns in air to form water vapor and release heat.
101345. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
101346. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101347. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
101348. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
101349. Calcium reacts with oxygen in air to form calcium oxide.
101350. Hydrogen reacts with oxygen to form water.

101351. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
101352. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
101353. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
101354. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
101355. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
101356. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
101357. Calcium Oxide combines with water to form calcium hydroxide.
101358. Methane burns in air to form carbon dioxide and water vapor and release heat.
101359. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
101360. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101361. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
101362. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
101363. Aluminium reacts with oxygen in air to form aluminium oxide.
101364. Nitrogen reacts with oxygen to form nitrogen oxides.
101365. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
101366. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
101367. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
101368. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
101369. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
101370. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
101371. Hydrogen combines with oxygen to form water.
101372. Ethane burns in air to form carbon dioxide and water vapor and release heat.
101373. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
101374. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101375. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
101376. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
101377. Zinc reacts with oxygen in air to form zinc oxide.
101378. Silicon reacts with oxygen to form silicon dioxide.
101379. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
101380. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
101381. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
101382. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
101383. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
101384. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
101385. Nitrogen combines with hydrogen to form ammonia.
101386. Propane burns in air to form carbon dioxide and water vapor and release heat.
101387. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
101388. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101389. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
101390. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
101391. Iron reacts with oxygen in air to form iron(III) oxide.
101392. Carbon reacts with oxygen to form carbon dioxide.
101393. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
101394. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
101395. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
101396. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
101397. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
101398. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
101399. Sulfur combines with oxygen to form sulfur dioxide.
101400. Butane burns in air to form carbon dioxide and water vapor and release heat.
101401. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
101402. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101403. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
101404. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
101405. Copper reacts with oxygen in air to form copper(II) oxide.
101406. Sulfur reacts with oxygen to form sulfur dioxide.
101407. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
101408. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
101409. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
101410. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
101411. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
101412. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
101413. Carbon combines with oxygen to form carbon dioxide.
101414. Carbon Monoxide burns in air to form carbon dioxide and release heat.
101415. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
101416. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101417. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
101418. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
101419. Lead reacts with oxygen in air to form lead(II) oxide.
101420. Phosphorus reacts with oxygen to form phosphorus pentoxide.
101421. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
101422. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
101423. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
101424. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
101425. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
101426. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
101427. Phosphorus combines with oxygen to form phosphorus pentoxide.
101428. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
101429. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
101430. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101431. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
101432. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
101433. Magnesium reacts with oxygen in air to form magnesium oxide.
101434. Hydrogen reacts with oxygen to form water.
101435. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
101436. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
101437. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
101438. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
101439. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
101440. On heating, hydrogen peroxide decomposes to form water and oxygen.
101441. Magnesium combines with oxygen to form magnesium oxide.

101442. Hydrogen burns in air to form water vapor and release heat.
101443. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
101444. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101445. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
101446. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
101447. Calcium reacts with oxygen in air to form calcium oxide.
101448. Nitrogen reacts with oxygen to form nitrogen oxides.
101449. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
101450. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
101451. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
101452. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
101453. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
101454. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
101455. Iron combines with sulfur to form iron sulfide.
101456. Methane burns in air to form carbon dioxide and water vapor and release heat.
101457. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
101458. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101459. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
101460. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
101461. Aluminium reacts with oxygen in air to form aluminium oxide.
101462. Silicon reacts with oxygen to form silicon dioxide.
101463. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
101464. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
101465. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
101466. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
101467. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
101468. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
101469. Calcium Oxide combines with water to form calcium hydroxide.
101470. Ethane burns in air to form carbon dioxide and water vapor and release heat.
101471. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
101472. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101473. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
101474. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
101475. Zinc reacts with oxygen in air to form zinc oxide.
101476. Carbon reacts with oxygen to form carbon dioxide.
101477. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
101478. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
101479. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
101480. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
101481. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
101482. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
101483. Hydrogen combines with oxygen to form water.
101484. Propane burns in air to form carbon dioxide and water vapor and release heat.
101485. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
101486. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101487. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
101488. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
101489. Iron reacts with oxygen in air to form iron(III) oxide.
101490. Sulfur reacts with oxygen to form sulfur dioxide.
101491. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
101492. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
101493. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
101494. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
101495. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
101496. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
101497. Nitrogen combines with hydrogen to form ammonia.
101498. Butane burns in air to form carbon dioxide and water vapor and release heat.
101499. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
101500. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101501. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
101502. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
101503. Copper reacts with oxygen in air to form copper(II) oxide.
101504. Phosphorus reacts with oxygen to form phosphorus pentoxide.
101505. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
101506. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
101507. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
101508. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
101509. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
101510. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
101511. Sulfur combines with oxygen to form sulfur dioxide.
101512. Carbon Monoxide burns in air to form carbon dioxide and release heat.
101513. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
101514. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101515. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
101516. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
101517. Lead reacts with oxygen in air to form lead(II) oxide.
101518. Hydrogen reacts with oxygen to form water.
101519. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
101520. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
101521. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
101522. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
101523. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
101524. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
101525. Carbon combines with oxygen to form carbon dioxide.
101526. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
101527. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
101528. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101529. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
101530. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
101531. Magnesium reacts with oxygen in air to form magnesium oxide.
101532. Nitrogen reacts with oxygen to form nitrogen oxides.
101533. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

101534. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

101535. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

101536. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

101537. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

101538. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

101539. Phosphorus combines with oxygen to form phosphorus pentoxide.

101540. Hydrogen burns in air to form water vapor and release heat.

101541. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

101542. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

101543. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.

101544. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

101545. Calcium reacts with oxygen in air to form calcium oxide.

101546. Silicon reacts with oxygen to form silicon dioxide.

101547. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

101548. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

101549. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

101550. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

101551. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

101552. On heating, hydrogen peroxide decomposes to form water and oxygen.

101553. Magnesium combines with oxygen to form magnesium oxide.

101554. Methane burns in air to form carbon dioxide and water vapor and release heat.

101555. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

101556. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

101557. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.

101558. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

101559. Aluminium reacts with oxygen in air to form aluminium oxide.

101560. Carbon reacts with oxygen to form carbon dioxide.

101561. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

101562. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

101563. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

101564. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

101565. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

101566. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

101567. Iron combines with sulfur to form iron sulfide.

101568. Ethane burns in air to form carbon dioxide and water vapor and release heat.

101569. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

101570. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

101571. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.

101572. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

101573. Zinc reacts with oxygen in air to form zinc oxide.

101574. Sulfur reacts with oxygen to form sulfur dioxide.

101575. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

101576. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

101577. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

101578. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

101579. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

101580. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

101581. Calcium Oxide combines with water to form calcium hydroxide.

101582. Propane burns in air to form carbon dioxide and water vapor and release heat.

101583. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

101584. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

101585. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

101586. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

101587. Iron reacts with oxygen in air to form iron(III) oxide.

101588. Phosphorus reacts with oxygen to form phosphorus pentoxide.

101589. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

101590. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

101591. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

101592. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

101593. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

101594. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

101595. Hydrogen combines with oxygen to form water.

101596. Butane burns in air to form carbon dioxide and water vapor and release heat.

101597. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

101598. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

101599. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

101600. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

101601. Copper reacts with oxygen in air to form copper(II) oxide.

101602. Hydrogen reacts with oxygen to form water.

101603. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

101604. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

101605. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

101606. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

101607. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

101608. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

101609. Nitrogen combines with hydrogen to form ammonia.

101610. Carbon Monoxide burns in air to form carbon dioxide and release heat.

101611. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

101612. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

101613. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

101614. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

101615. Lead reacts with oxygen in air to form lead(II) oxide.

101616. Nitrogen reacts with oxygen to form nitrogen oxides.

101617. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

101618. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

101619. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

101620. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

101621. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

101622. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

101623. Sulfur combines with oxygen to form sulfur dioxide.

101624. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

101625. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
101626. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101627. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
101628. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
101629. Magnesium reacts with oxygen in air to form magnesium oxide.
101630. Silicon reacts with oxygen to form silicon dioxide.
101631. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
101632. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
101633. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
101634. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
101635. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
101636. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
101637. Carbon combines with oxygen to form carbon dioxide.
101638. Hydrogen burns in air to form water vapor and release heat.
101639. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
101640. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101641. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
101642. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
101643. Calcium reacts with oxygen in air to form calcium oxide.
101644. Carbon reacts with oxygen to form carbon dioxide.
101645. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
101646. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
101647. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
101648. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
101649. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
101650. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
101651. Phosphorus combines with oxygen to form phosphorus pentoxide.
101652. Methane burns in air to form carbon dioxide and water vapor and release heat.
101653. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
101654. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101655. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
101656. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
101657. Aluminium reacts with oxygen in air to form aluminium oxide.
101658. Sulfur reacts with oxygen to form sulfur dioxide.
101659. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
101660. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
101661. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
101662. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
101663. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
101664. On heating, hydrogen peroxide decomposes to form water and oxygen.
101665. Magnesium combines with oxygen to form magnesium oxide.
101666. Ethane burns in air to form carbon dioxide and water vapor and release heat.
101667. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
101668. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101669. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
101670. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
101671. Zinc reacts with oxygen in air to form zinc oxide.
101672. Phosphorus reacts with oxygen to form phosphorus pentoxide.
101673. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
101674. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
101675. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
101676. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
101677. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
101678. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
101679. Iron combines with sulfur to form iron sulfide.
101680. Propane burns in air to form carbon dioxide and water vapor and release heat.
101681. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
101682. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101683. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
101684. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
101685. Iron reacts with oxygen in air to form iron(III) oxide.
101686. Hydrogen reacts with oxygen to form water.
101687. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
101688. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
101689. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
101690. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
101691. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
101692. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
101693. Calcium Oxide combines with water to form calcium hydroxide.
101694. Butane burns in air to form carbon dioxide and water vapor and release heat.
101695. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
101696. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101697. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
101698. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
101699. Copper reacts with oxygen in air to form copper(II) oxide.
101700. Nitrogen reacts with oxygen to form nitrogen oxides.
101701. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
101702. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
101703. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
101704. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
101705. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
101706. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
101707. Hydrogen combines with oxygen to form water.
101708. Carbon Monoxide burns in air to form carbon dioxide and release heat.
101709. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
101710. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101711. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
101712. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
101713. Lead reacts with oxygen in air to form lead(II) oxide.
101714. Silicon reacts with oxygen to form silicon dioxide.
101715. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
101716. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

101717. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
101718. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
101719. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
101720. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
101721. Nitrogen combines with hydrogen to form ammonia.
101722. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
101723. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
101724. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101725. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
101726. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
101727. Magnesium reacts with oxygen in air to form magnesium oxide.
101728. Carbon reacts with oxygen to form carbon dioxide.
101729. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
101730. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
101731. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
101732. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
101733. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
101734. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
101735. Sulfur combines with oxygen to form sulfur dioxide.
101736. Hydrogen burns in air to form water vapor and release heat.
101737. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
101738. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101739. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
101740. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
101741. Calcium reacts with oxygen in air to form calcium oxide.
101742. Sulfur reacts with oxygen to form sulfur dioxide.
101743. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
101744. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
101745. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
101746. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
101747. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
101748. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
101749. Carbon combines with oxygen to form carbon dioxide.
101750. Methane burns in air to form carbon dioxide and water vapor and release heat.
101751. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
101752. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101753. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
101754. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
101755. Aluminium reacts with oxygen in air to form aluminium oxide.
101756. Phosphorus reacts with oxygen to form phosphorus pentoxide.
101757. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
101758. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
101759. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
101760. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
101761. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
101762. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
101763. Phosphorus combines with oxygen to form phosphorus pentoxide.
101764. Ethane burns in air to form carbon dioxide and water vapor and release heat.
101765. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
101766. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101767. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
101768. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
101769. Zinc reacts with oxygen in air to form zinc oxide.
101770. Hydrogen reacts with oxygen to form water.
101771. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
101772. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
101773. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
101774. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
101775. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
101776. On heating, hydrogen peroxide decomposes to form water and oxygen.
101777. Magnesium combines with oxygen to form magnesium oxide.
101778. Propane burns in air to form carbon dioxide and water vapor and release heat.
101779. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
101780. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101781. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
101782. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
101783. Iron reacts with oxygen in air to form iron(III) oxide.
101784. Nitrogen reacts with oxygen to form nitrogen oxides.
101785. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
101786. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
101787. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
101788. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
101789. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
101790. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
101791. Iron combines with sulfur to form iron sulfide.
101792. Butane burns in air to form carbon dioxide and water vapor and release heat.
101793. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
101794. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101795. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
101796. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
101797. Copper reacts with oxygen in air to form copper(II) oxide.
101798. Silicon reacts with oxygen to form silicon dioxide.
101799. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
101800. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
101801. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
101802. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
101803. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
101804. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
101805. Calcium Oxide combines with water to form calcium hydroxide.
101806. Carbon Monoxide burns in air to form carbon dioxide and release heat.
101807. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
101808. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

101809. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
101810. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
101811. Lead reacts with oxygen in air to form lead(II) oxide.
101812. Carbon reacts with oxygen to form carbon dioxide.
101813. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
101814. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
101815. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
101816. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
101817. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
101818. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
101819. Hydrogen combines with oxygen to form water.
101820. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
101821. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
101822. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101823. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
101824. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
101825. Magnesium reacts with oxygen in air to form magnesium oxide.
101826. Sulfur reacts with oxygen to form sulfur dioxide.
101827. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
101828. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
101829. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
101830. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
101831. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
101832. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
101833. Nitrogen combines with hydrogen to form ammonia.
101834. Hydrogen burns in air to form water vapor and release heat.
101835. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
101836. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101837. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
101838. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
101839. Calcium reacts with oxygen in air to form calcium oxide.
101840. Phosphorus reacts with oxygen to form phosphorus pentoxide.
101841. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
101842. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
101843. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
101844. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
101845. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
101846. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
101847. Sulfur combines with oxygen to form sulfur dioxide.
101848. Methane burns in air to form carbon dioxide and water vapor and release heat.
101849. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
101850. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101851. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
101852. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
101853. Aluminium reacts with oxygen in air to form aluminium oxide.
101854. Hydrogen reacts with oxygen to form water.
101855. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
101856. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
101857. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
101858. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
101859. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
101860. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
101861. Carbon combines with oxygen to form carbon dioxide.
101862. Ethane burns in air to form carbon dioxide and water vapor and release heat.
101863. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
101864. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101865. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
101866. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
101867. Zinc reacts with oxygen in air to form zinc oxide.
101868. Nitrogen reacts with oxygen to form nitrogen oxides.
101869. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
101870. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
101871. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
101872. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
101873. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
101874. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
101875. Phosphorus combines with oxygen to form phosphorus pentoxide.
101876. Propane burns in air to form carbon dioxide and water vapor and release heat.
101877. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
101878. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101879. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
101880. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
101881. Iron reacts with oxygen in air to form iron(III) oxide.
101882. Silicon reacts with oxygen to form silicon dioxide.
101883. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
101884. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
101885. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
101886. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
101887. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
101888. On heating, hydrogen peroxide decomposes to form water and oxygen.
101889. Magnesium combines with oxygen to form magnesium oxide.
101890. Butane burns in air to form carbon dioxide and water vapor and release heat.
101891. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
101892. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101893. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
101894. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
101895. Copper reacts with oxygen in air to form copper(II) oxide.
101896. Carbon reacts with oxygen to form carbon dioxide.
101897. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
101898. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
101899. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

101900. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
101901. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
101902. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
101903. Iron combines with sulfur to form iron sulfide.
101904. Carbon Monoxide burns in air to form carbon dioxide and release heat.
101905. Copper(I) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
101906. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101907. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
101908. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
101909. Lead reacts with oxygen in air to form lead(II) oxide.
101910. Sulfur reacts with oxygen to form sulfur dioxide.
101911. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
101912. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
101913. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
101914. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
101915. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
101916. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
101917. Calcium Oxide combines with water to form calcium hydroxide.
101918. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
101919. Copper(I) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
101920. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101921. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
101922. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
101923. Magnesium reacts with oxygen in air to form magnesium oxide.
101924. Phosphorus reacts with oxygen to form phosphorus pentoxide.
101925. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
101926. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
101927. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
101928. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
101929. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
101930. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
101931. Hydrogen combines with oxygen to form water.
101932. Hydrogen burns in air to form water vapor and release heat.
101933. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
101934. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101935. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
101936. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
101937. Calcium reacts with oxygen in air to form calcium oxide.
101938. Hydrogen reacts with oxygen to form water.
101939. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
101940. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
101941. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
101942. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
101943. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
101944. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
101945. Nitrogen combines with hydrogen to form ammonia.
101946. Methane burns in air to form carbon dioxide and water vapor and release heat.
101947. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
101948. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101949. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
101950. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
101951. Aluminium reacts with oxygen in air to form aluminium oxide.
101952. Nitrogen reacts with oxygen to form nitrogen oxides.
101953. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
101954. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
101955. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
101956. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
101957. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
101958. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
101959. Sulfur combines with oxygen to form sulfur dioxide.
101960. Ethane burns in air to form carbon dioxide and water vapor and release heat.
101961. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
101962. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101963. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
101964. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
101965. Zinc reacts with oxygen in air to form zinc oxide.
101966. Silicon reacts with oxygen to form silicon dioxide.
101967. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
101968. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
101969. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
101970. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
101971. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
101972. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
101973. Carbon combines with oxygen to form carbon dioxide.
101974. Propane burns in air to form carbon dioxide and water vapor and release heat.
101975. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
101976. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
101977. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
101978. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
101979. Iron reacts with oxygen in air to form iron(III) oxide.
101980. Carbon reacts with oxygen to form carbon dioxide.
101981. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
101982. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
101983. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
101984. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
101985. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
101986. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
101987. Phosphorus combines with oxygen to form phosphorus pentoxide.
101988. Butane burns in air to form carbon dioxide and water vapor and release heat.
101989. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
101990. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

101991. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
101992. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
101993. Copper reacts with oxygen in air to form copper(II) oxide.
101994. Sulfur reacts with oxygen to form sulfur dioxide.
101995. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
101996. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
101997. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
101998. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
101999. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
102000. On heating, hydrogen peroxide decomposes to form water and oxygen.
102001. Magnesium combines with oxygen to form magnesium oxide.
102002. Carbon Monoxide burns in air to form carbon dioxide and release heat.
102003. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
102004. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102005. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
102006. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
102007. Lead reacts with oxygen in air to form lead(II) oxide.
102008. Phosphorus reacts with oxygen to form phosphorus pentoxide.
102009. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
102010. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
102011. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
102012. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
102013. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
102014. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
102015. Iron combines with sulfur to form iron sulfide.
102016. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
102017. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
102018. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102019. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
102020. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
102021. Magnesium reacts with oxygen in air to form magnesium oxide.
102022. Hydrogen reacts with oxygen to form water.
102023. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
102024. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
102025. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
102026. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
102027. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
102028. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
102029. Calcium Oxide combines with water to form calcium hydroxide.
102030. Hydrogen burns in air to form water vapor and release heat.
102031. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
102032. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102033. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
102034. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
102035. Calcium reacts with oxygen in air to form calcium oxide.
102036. Nitrogen reacts with oxygen to form nitrogen oxides.
102037. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
102038. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
102039. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
102040. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
102041. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
102042. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
102043. Hydrogen combines with oxygen to form water.
102044. Methane burns in air to form carbon dioxide and water vapor and release heat.
102045. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
102046. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102047. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
102048. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
102049. Aluminium reacts with oxygen in air to form aluminium oxide.
102050. Silicon reacts with oxygen to form silicon dioxide.
102051. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
102052. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
102053. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
102054. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
102055. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
102056. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
102057. Nitrogen combines with hydrogen to form ammonia.
102058. Ethane burns in air to form carbon dioxide and water vapor and release heat.
102059. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
102060. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102061. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
102062. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
102063. Zinc reacts with oxygen in air to form zinc oxide.
102064. Carbon reacts with oxygen to form carbon dioxide.
102065. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
102066. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
102067. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
102068. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
102069. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
102070. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
102071. Sulfur combines with oxygen to form sulfur dioxide.
102072. Propane burns in air to form carbon dioxide and water vapor and release heat.
102073. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
102074. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102075. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
102076. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
102077. Iron reacts with oxygen in air to form iron(III) oxide.
102078. Sulfur reacts with oxygen to form sulfur dioxide.
102079. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
102080. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
102081. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
102082. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

102083. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
102084. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
102085. Carbon combines with oxygen to form carbon dioxide.
102086. Butane burns in air to form carbon dioxide and water vapor and release heat.
102087. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
102088. Copper(I) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102089. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
102090. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
102091. Copper reacts with oxygen in air to form copper(II) oxide.
102092. Phosphorus reacts with oxygen to form phosphorus pentoxide.
102093. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
102094. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
102095. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
102096. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
102097. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
102098. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
102099. Phosphorus combines with oxygen to form phosphorus pentoxide.
102100. Carbon Monoxide burns in air to form carbon dioxide and release heat.
102101. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
102102. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102103. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
102104. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
102105. Lead reacts with oxygen in air to form lead(II) oxide.
102106. Hydrogen reacts with oxygen to form water.
102107. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
102108. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
102109. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
102110. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
102111. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
102112. On heating, hydrogen peroxide decomposes to form water and oxygen.
102113. Magnesium combines with oxygen to form magnesium oxide.
102114. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
102115. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
102116. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102117. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
102118. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
102119. Magnesium reacts with oxygen in air to form magnesium oxide.
102120. Nitrogen reacts with oxygen to form nitrogen oxides.
102121. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
102122. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
102123. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
102124. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
102125. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
102126. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
102127. Iron combines with sulfur to form iron sulfide.
102128. Hydrogen burns in air to form water vapor and release heat.
102129. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
102130. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102131. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
102132. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
102133. Calcium reacts with oxygen in air to form calcium oxide.
102134. Silicon reacts with oxygen to form silicon dioxide.
102135. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
102136. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
102137. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
102138. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
102139. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
102140. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
102141. Calcium Oxide combines with water to form calcium hydroxide.
102142. Methane burns in air to form carbon dioxide and water vapor and release heat.
102143. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
102144. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102145. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
102146. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
102147. Aluminium reacts with oxygen in air to form aluminium oxide.
102148. Carbon reacts with oxygen to form carbon dioxide.
102149. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
102150. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
102151. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
102152. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
102153. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
102154. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
102155. Hydrogen combines with oxygen to form water.
102156. Ethane burns in air to form carbon dioxide and water vapor and release heat.
102157. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
102158. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102159. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
102160. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
102161. Zinc reacts with oxygen in air to form zinc oxide.
102162. Sulfur reacts with oxygen to form sulfur dioxide.
102163. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
102164. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
102165. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
102166. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
102167. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
102168. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
102169. Nitrogen combines with hydrogen to form ammonia.
102170. Propane burns in air to form carbon dioxide and water vapor and release heat.
102171. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
102172. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102173. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.

102174. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
102175. Iron reacts with oxygen in air to form iron(III) oxide.
102176. Phosphorus reacts with oxygen to form phosphorus pentoxide.
102177. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
102178. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
102179. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
102180. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
102181. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
102182. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
102183. Sulfur combines with oxygen to form sulfur dioxide.
102184. Butane burns in air to form carbon dioxide and water vapor and release heat.
102185. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
102186. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102187. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
102188. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
102189. Copper reacts with oxygen in air to form copper(II) oxide.
102190. Hydrogen reacts with oxygen to form water.
102191. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
102192. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
102193. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
102194. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
102195. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
102196. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
102197. Carbon combines with oxygen to form carbon dioxide.
102198. Carbon Monoxide burns in air to form carbon dioxide and release heat.
102199. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
102200. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102201. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
102202. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
102203. Lead reacts with oxygen in air to form lead(II) oxide.
102204. Nitrogen reacts with oxygen to form nitrogen oxides.
102205. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
102206. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
102207. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
102208. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
102209. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
102210. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
102211. Phosphorus combines with oxygen to form phosphorus pentoxide.
102212. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
102213. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
102214. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102215. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
102216. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
102217. Magnesium reacts with oxygen in air to form magnesium oxide.
102218. Silicon reacts with oxygen to form silicon dioxide.
102219. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
102220. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
102221. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
102222. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
102223. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
102224. On heating, hydrogen peroxide decomposes to form water and oxygen.
102225. Magnesium combines with oxygen to form magnesium oxide.
102226. Hydrogen burns in air to form water vapor and release heat.
102227. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
102228. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102229. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
102230. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
102231. Calcium reacts with oxygen in air to form calcium oxide.
102232. Carbon reacts with oxygen to form carbon dioxide.
102233. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
102234. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
102235. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
102236. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
102237. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
102238. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
102239. Iron combines with sulfur to form iron sulfide.
102240. Methane burns in air to form carbon dioxide and water vapor and release heat.
102241. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
102242. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102243. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
102244. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
102245. Aluminium reacts with oxygen in air to form aluminium oxide.
102246. Sulfur reacts with oxygen to form sulfur dioxide.
102247. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
102248. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
102249. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
102250. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
102251. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
102252. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
102253. Calcium Oxide combines with water to form calcium hydroxide.
102254. Ethane burns in air to form carbon dioxide and water vapor and release heat.
102255. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
102256. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102257. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
102258. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
102259. Zinc reacts with oxygen in air to form zinc oxide.
102260. Phosphorus reacts with oxygen to form phosphorus pentoxide.
102261. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
102262. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
102263. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
102264. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
102265. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

102266. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

102267. Hydrogen combines with oxygen to form water.

102268. Propane burns in air to form carbon dioxide and water vapor and release heat.

102269. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

102270. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

102271. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

102272. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

102273. Iron reacts with oxygen in air to form iron(III) oxide.

102274. Hydrogen reacts with oxygen to form water.

102275. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

102276. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

102277. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

102278. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

102279. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

102280. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

102281. Nitrogen combines with hydrogen to form ammonia.

102282. Butane burns in air to form carbon dioxide and water vapor and release heat.

102283. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

102284. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

102285. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

102286. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

102287. Copper reacts with oxygen in air to form copper(II) oxide.

102288. Nitrogen reacts with oxygen to form nitrogen oxides.

102289. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

102290. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

102291. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

102292. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

102293. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

102294. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

102295. Sulfur combines with oxygen to form sulfur dioxide.

102296. Carbon Monoxide burns in air to form carbon dioxide and release heat.

102297. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

102298. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

102299. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.

102300. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

102301. Lead reacts with oxygen in air to form lead(II) oxide.

102302. Silicon reacts with oxygen to form silicon dioxide.

102303. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

102304. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

102305. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

102306. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

102307. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

102308. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

102309. Carbon combines with oxygen to form carbon dioxide.

102310. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

102311. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

102312. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

102313. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.

102314. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

102315. Magnesium reacts with oxygen in air to form magnesium oxide.

102316. Carbon reacts with oxygen to form carbon dioxide.

102317. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

102318. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

102319. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

102320. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

102321. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

102322. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

102323. Phosphorus combines with oxygen to form phosphorus pentoxide.

102324. Hydrogen burns in air to form water vapor and release heat.

102325. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

102326. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

102327. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

102328. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

102329. Calcium reacts with oxygen in air to form calcium oxide.

102330. Sulfur reacts with oxygen to form sulfur dioxide.

102331. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

102332. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

102333. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

102334. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

102335. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

102336. On heating, hydrogen peroxide decomposes to form water and oxygen.

102337. Magnesium combines with oxygen to form magnesium oxide.

102338. Methane burns in air to form carbon dioxide and water vapor and release heat.

102339. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

102340. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

102341. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

102342. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

102343. Aluminium reacts with oxygen in air to form aluminium oxide.

102344. Phosphorus reacts with oxygen to form phosphorus pentoxide.

102345. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

102346. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

102347. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

102348. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

102349. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

102350. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

102351. Iron combines with sulfur to form iron sulfide.

102352. Ethane burns in air to form carbon dioxide and water vapor and release heat.

102353. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

102354. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

102355. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

102356. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

102357. Zinc reacts with oxygen in air to form zinc oxide.
102358. Hydrogen reacts with oxygen to form water.
102359. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
102360. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
102361. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
102362. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
102363. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
102364. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
102365. Calcium Oxide combines with water to form calcium hydroxide.
102366. Propane burns in air to form carbon dioxide and water vapor and release heat.
102367. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
102368. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102369. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
102370. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
102371. Iron reacts with oxygen in air to form iron(III) oxide.
102372. Nitrogen reacts with oxygen to form nitrogen oxides.
102373. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
102374. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
102375. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
102376. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
102377. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
102378. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
102379. Hydrogen combines with oxygen to form water.
102380. Butane burns in air to form carbon dioxide and water vapor and release heat.
102381. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
102382. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102383. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
102384. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
102385. Copper reacts with oxygen in air to form copper(II) oxide.
102386. Silicon reacts with oxygen to form silicon dioxide.
102387. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
102388. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
102389. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
102390. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
102391. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
102392. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
102393. Nitrogen combines with hydrogen to form ammonia.
102394. Carbon Monoxide burns in air to form carbon dioxide and release heat.
102395. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
102396. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102397. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
102398. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
102399. Lead reacts with oxygen in air to form lead(II) oxide.
102400. Carbon reacts with oxygen to form carbon dioxide.
102401. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
102402. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
102403. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
102404. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
102405. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
102406. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
102407. Sulfur combines with oxygen to form sulfur dioxide.
102408. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
102409. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
102410. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102411. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
102412. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
102413. Magnesium reacts with oxygen in air to form magnesium oxide.
102414. Sulfur reacts with oxygen to form sulfur dioxide.
102415. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
102416. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
102417. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
102418. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
102419. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
102420. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
102421. Carbon combines with oxygen to form carbon dioxide.
102422. Hydrogen burns in air to form water vapor and release heat.
102423. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
102424. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102425. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
102426. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
102427. Calcium reacts with oxygen in air to form calcium oxide.
102428. Phosphorus reacts with oxygen to form phosphorus pentoxide.
102429. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
102430. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
102431. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
102432. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
102433. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
102434. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
102435. Phosphorus combines with oxygen to form phosphorus pentoxide.
102436. Methane burns in air to form carbon dioxide and water vapor and release heat.
102437. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
102438. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102439. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
102440. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
102441. Aluminium reacts with oxygen in air to form aluminium oxide.
102442. Hydrogen reacts with oxygen to form water.
102443. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
102444. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
102445. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
102446. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
102447. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
102448. On heating, hydrogen peroxide decomposes to form water and oxygen.

102449. Magnesium combines with oxygen to form magnesium oxide.
102450. Ethane burns in air to form carbon dioxide and water vapor and release heat.
102451. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
102452. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102453. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
102454. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
102455. Zinc reacts with oxygen in air to form zinc oxide.
102456. Nitrogen reacts with oxygen to form nitrogen oxides.
102457. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
102458. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
102459. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
102460. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
102461. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
102462. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
102463. Iron combines with sulfur to form iron sulfide.
102464. Propane burns in air to form carbon dioxide and water vapor and release heat.
102465. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
102466. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102467. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
102468. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
102469. Iron reacts with oxygen in air to form iron(III) oxide.
102470. Silicon reacts with oxygen to form silicon dioxide.
102471. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
102472. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
102473. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
102474. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
102475. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
102476. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
102477. Calcium Oxide combines with water to form calcium hydroxide.
102478. Butane burns in air to form carbon dioxide and water vapor and release heat.
102479. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
102480. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102481. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
102482. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
102483. Copper reacts with oxygen in air to form copper(II) oxide.
102484. Carbon reacts with oxygen to form carbon dioxide.
102485. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
102486. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
102487. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
102488. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
102489. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
102490. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
102491. Hydrogen combines with oxygen to form water.
102492. Carbon Monoxide burns in air to form carbon dioxide and release heat.
102493. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
102494. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102495. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
102496. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
102497. Lead reacts with oxygen in air to form lead(II) oxide.
102498. Sulfur reacts with oxygen to form sulfur dioxide.
102499. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
102500. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
102501. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
102502. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
102503. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
102504. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
102505. Nitrogen combines with hydrogen to form ammonia.
102506. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
102507. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
102508. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102509. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
102510. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
102511. Magnesium reacts with oxygen in air to form magnesium oxide.
102512. Phosphorus reacts with oxygen to form phosphorus pentoxide.
102513. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
102514. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
102515. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
102516. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
102517. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
102518. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
102519. Sulfur combines with oxygen to form sulfur dioxide.
102520. Hydrogen burns in air to form water vapor and release heat.
102521. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
102522. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102523. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
102524. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
102525. Calcium reacts with oxygen in air to form calcium oxide.
102526. Hydrogen reacts with oxygen to form water.
102527. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
102528. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
102529. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
102530. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
102531. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
102532. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
102533. Carbon combines with oxygen to form carbon dioxide.
102534. Methane burns in air to form carbon dioxide and water vapor and release heat.
102535. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
102536. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102537. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
102538. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
102539. Aluminium reacts with oxygen in air to form aluminium oxide.
102540. Nitrogen reacts with oxygen to form nitrogen oxides.

102541. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
102542. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
102543. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
102544. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
102545. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
102546. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
102547. Phosphorus combines with oxygen to form phosphorus pentoxide.
102548. Ethane burns in air to form carbon dioxide and water vapor and release heat.
102549. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
102550. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102551. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
102552. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
102553. Zinc reacts with oxygen in air to form zinc oxide.
102554. Silicon reacts with oxygen to form silicon dioxide.
102555. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
102556. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
102557. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
102558. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
102559. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
102560. On heating, hydrogen peroxide decomposes to form water and oxygen.
102561. Magnesium combines with oxygen to form magnesium oxide.
102562. Propane burns in air to form carbon dioxide and water vapor and release heat.
102563. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
102564. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102565. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
102566. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
102567. Iron reacts with oxygen in air to form iron(III) oxide.
102568. Carbon reacts with oxygen to form carbon dioxide.
102569. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
102570. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
102571. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
102572. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
102573. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
102574. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
102575. Iron combines with sulfur to form iron sulfide.
102576. Butane burns in air to form carbon dioxide and water vapor and release heat.
102577. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
102578. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102579. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
102580. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
102581. Copper reacts with oxygen in air to form copper(II) oxide.
102582. Sulfur reacts with oxygen to form sulfur dioxide.
102583. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
102584. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
102585. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
102586. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
102587. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
102588. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
102589. Calcium Oxide combines with water to form calcium hydroxide.
102590. Carbon Monoxide burns in air to form carbon dioxide and release heat.
102591. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
102592. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102593. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
102594. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
102595. Lead reacts with oxygen in air to form lead(II) oxide.
102596. Phosphorus reacts with oxygen to form phosphorus pentoxide.
102597. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
102598. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
102599. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
102600. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
102601. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
102602. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
102603. Hydrogen combines with oxygen to form water.
102604. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
102605. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
102606. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102607. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
102608. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
102609. Magnesium reacts with oxygen in air to form magnesium oxide.
102610. Hydrogen reacts with oxygen to form water.
102611. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
102612. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
102613. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
102614. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
102615. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
102616. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
102617. Nitrogen combines with hydrogen to form ammonia.
102618. Hydrogen burns in air to form water vapor and release heat.
102619. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
102620. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102621. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
102622. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
102623. Calcium reacts with oxygen in air to form calcium oxide.
102624. Nitrogen reacts with oxygen to form nitrogen oxides.
102625. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
102626. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
102627. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
102628. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
102629. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
102630. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
102631. Sulfur combines with oxygen to form sulfur dioxide.

102632. Methane burns in air to form carbon dioxide and water vapor and release heat.
102633. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
102634. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102635. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
102636. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
102637. Aluminium reacts with oxygen in air to form aluminium oxide.
102638. Silicon reacts with oxygen to form silicon dioxide.
102639. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
102640. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
102641. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
102642. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
102643. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
102644. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
102645. Carbon combines with oxygen to form carbon dioxide.
102646. Ethane burns in air to form carbon dioxide and water vapor and release heat.
102647. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
102648. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102649. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
102650. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
102651. Zinc reacts with oxygen in air to form zinc oxide.
102652. Carbon reacts with oxygen to form carbon dioxide.
102653. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
102654. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
102655. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
102656. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
102657. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
102658. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
102659. Phosphorus combines with oxygen to form phosphorus pentoxide.
102660. Propane burns in air to form carbon dioxide and water vapor and release heat.
102661. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
102662. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102663. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
102664. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
102665. Iron reacts with oxygen in air to form iron(III) oxide.
102666. Sulfur reacts with oxygen to form sulfur dioxide.
102667. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
102668. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
102669. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
102670. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
102671. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
102672. On heating, hydrogen peroxide decomposes to form water and oxygen.
102673. Magnesium combines with oxygen to form magnesium oxide.
102674. Butane burns in air to form carbon dioxide and water vapor and release heat.
102675. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
102676. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102677. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
102678. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
102679. Copper reacts with oxygen in air to form copper(II) oxide.
102680. Phosphorus reacts with oxygen to form phosphorus pentoxide.
102681. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
102682. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
102683. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
102684. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
102685. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
102686. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
102687. Iron combines with sulfur to form iron sulfide.
102688. Carbon Monoxide burns in air to form carbon dioxide and release heat.
102689. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
102690. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102691. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
102692. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
102693. Lead reacts with oxygen in air to form lead(II) oxide.
102694. Hydrogen reacts with oxygen to form water.
102695. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
102696. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
102697. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
102698. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
102699. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
102700. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
102701. Calcium Oxide combines with water to form calcium hydroxide.
102702. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
102703. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
102704. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102705. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
102706. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
102707. Magnesium reacts with oxygen in air to form magnesium oxide.
102708. Nitrogen reacts with oxygen to form nitrogen oxides.
102709. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
102710. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
102711. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
102712. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
102713. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
102714. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
102715. Hydrogen combines with oxygen to form water.
102716. Hydrogen burns in air to form water vapor and release heat.
102717. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
102718. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102719. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
102720. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
102721. Calcium reacts with oxygen in air to form calcium oxide.
102722. Silicon reacts with oxygen to form silicon dioxide.
102723. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

102724. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

102725. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

102726. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

102727. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

102728. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

102729. Nitrogen combines with hydrogen to form ammonia.

102730. Methane burns in air to form carbon dioxide and water vapor and release heat.

102731. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

102732. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

102733. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

102734. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

102735. Aluminium reacts with oxygen in air to form aluminium oxide.

102736. Carbon reacts with oxygen to form carbon dioxide.

102737. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

102738. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

102739. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

102740. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

102741. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

102742. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

102743. Sulfur combines with oxygen to form sulfur dioxide.

102744. Ethane burns in air to form carbon dioxide and water vapor and release heat.

102745. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

102746. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

102747. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

102748. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

102749. Zinc reacts with oxygen in air to form zinc oxide.

102750. Sulfur reacts with oxygen to form sulfur dioxide.

102751. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

102752. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

102753. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

102754. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

102755. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

102756. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

102757. Carbon combines with oxygen to form carbon dioxide.

102758. Propane burns in air to form carbon dioxide and water vapor and release heat.

102759. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

102760. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

102761. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

102762. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

102763. Iron reacts with oxygen in air to form iron(III) oxide.

102764. Phosphorus reacts with oxygen to form phosphorus pentoxide.

102765. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

102766. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

102767. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

102768. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

102769. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

102770. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

102771. Phosphorus combines with oxygen to form phosphorus pentoxide.

102772. Butane burns in air to form carbon dioxide and water vapor and release heat.

102773. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

102774. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

102775. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

102776. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

102777. Copper reacts with oxygen in air to form copper(II) oxide.

102778. Hydrogen reacts with oxygen to form water.

102779. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

102780. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

102781. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

102782. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

102783. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

102784. On heating, hydrogen peroxide decomposes to form water and oxygen.

102785. Magnesium combines with oxygen to form magnesium oxide.

102786. Carbon Monoxide burns in air to form carbon dioxide and release heat.

102787. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

102788. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

102789. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

102790. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

102791. Lead reacts with oxygen in air to form lead(II) oxide.

102792. Nitrogen reacts with oxygen to form nitrogen oxides.

102793. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

102794. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

102795. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

102796. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

102797. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

102798. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

102799. Iron combines with sulfur to form iron sulfide.

102800. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

102801. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

102802. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

102803. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

102804. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

102805. Magnesium reacts with oxygen in air to form magnesium oxide.

102806. Silicon reacts with oxygen to form silicon dioxide.

102807. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

102808. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

102809. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

102810. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

102811. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

102812. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

102813. Calcium Oxide combines with water to form calcium hydroxide.

102814. Hydrogen burns in air to form water vapor and release heat.

102815. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

102816. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102817. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
102818. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
102819. Calcium reacts with oxygen in air to form calcium oxide.
102820. Carbon reacts with oxygen to form carbon dioxide.
102821. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
102822. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
102823. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
102824. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
102825. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
102826. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
102827. Hydrogen combines with oxygen to form water.
102828. Methane burns in air to form carbon dioxide and water vapor and release heat.
102829. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
102830. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102831. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
102832. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
102833. Aluminium reacts with oxygen in air to form aluminium oxide.
102834. Sulfur reacts with oxygen to form sulfur dioxide.
102835. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
102836. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
102837. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
102838. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
102839. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
102840. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
102841. Nitrogen combines with hydrogen to form ammonia.
102842. Ethane burns in air to form carbon dioxide and water vapor and release heat.
102843. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
102844. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102845. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
102846. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
102847. Zinc reacts with oxygen in air to form zinc oxide.
102848. Phosphorus reacts with oxygen to form phosphorus pentoxide.
102849. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
102850. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
102851. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
102852. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
102853. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
102854. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
102855. Sulfur combines with oxygen to form sulfur dioxide.
102856. Propane burns in air to form carbon dioxide and water vapor and release heat.
102857. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
102858. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102859. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
102860. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
102861. Iron reacts with oxygen in air to form iron(III) oxide.
102862. Hydrogen reacts with oxygen to form water.
102863. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
102864. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
102865. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
102866. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
102867. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
102868. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
102869. Carbon combines with oxygen to form carbon dioxide.
102870. Butane burns in air to form carbon dioxide and water vapor and release heat.
102871. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
102872. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102873. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
102874. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
102875. Copper reacts with oxygen in air to form copper(II) oxide.
102876. Nitrogen reacts with oxygen to form nitrogen oxides.
102877. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
102878. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
102879. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
102880. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
102881. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
102882. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
102883. Phosphorus combines with oxygen to form phosphorus pentoxide.
102884. Carbon Monoxide burns in air to form carbon dioxide and release heat.
102885. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
102886. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102887. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
102888. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
102889. Lead reacts with oxygen in air to form lead(II) oxide.
102890. Silicon reacts with oxygen to form silicon dioxide.
102891. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
102892. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
102893. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
102894. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
102895. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
102896. On heating, hydrogen peroxide decomposes to form water and oxygen.
102897. Magnesium combines with oxygen to form magnesium oxide.
102898. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
102899. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
102900. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102901. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
102902. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
102903. Magnesium reacts with oxygen in air to form magnesium oxide.
102904. Carbon reacts with oxygen to form carbon dioxide.
102905. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
102906. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

102907. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
102908. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
102909. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
102910. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
102911. Iron combines with sulfur to form iron sulfide.
102912. Hydrogen burns in air to form water vapor and release heat.
102913. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
102914. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102915. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
102916. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
102917. Calcium reacts with oxygen in air to form calcium oxide.
102918. Sulfur reacts with oxygen to form sulfur dioxide.
102919. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
102920. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
102921. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
102922. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
102923. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
102924. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
102925. Calcium Oxide combines with water to form calcium hydroxide.
102926. Methane burns in air to form carbon dioxide and water vapor and release heat.
102927. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
102928. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102929. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
102930. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
102931. Aluminium reacts with oxygen in air to form aluminium oxide.
102932. Phosphorus reacts with oxygen to form phosphorus pentoxide.
102933. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
102934. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
102935. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
102936. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
102937. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
102938. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
102939. Hydrogen combines with oxygen to form water.
102940. Ethane burns in air to form carbon dioxide and water vapor and release heat.
102941. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
102942. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102943. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
102944. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
102945. Zinc reacts with oxygen in air to form zinc oxide.
102946. Hydrogen reacts with oxygen to form water.
102947. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
102948. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
102949. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
102950. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
102951. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
102952. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
102953. Nitrogen combines with hydrogen to form ammonia.
102954. Propane burns in air to form carbon dioxide and water vapor and release heat.
102955. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
102956. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102957. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
102958. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
102959. Iron reacts with oxygen in air to form iron(III) oxide.
102960. Nitrogen reacts with oxygen to form nitrogen oxides.
102961. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
102962. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
102963. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
102964. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
102965. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
102966. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
102967. Sulfur combines with oxygen to form sulfur dioxide.
102968. Butane burns in air to form carbon dioxide and water vapor and release heat.
102969. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
102970. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102971. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
102972. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
102973. Copper reacts with oxygen in air to form copper(II) oxide.
102974. Silicon reacts with oxygen to form silicon dioxide.
102975. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
102976. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
102977. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
102978. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
102979. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
102980. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
102981. Carbon combines with oxygen to form carbon dioxide.
102982. Carbon Monoxide burns in air to form carbon dioxide and release heat.
102983. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
102984. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
102985. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
102986. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
102987. Lead reacts with oxygen in air to form lead(II) oxide.
102988. Carbon reacts with oxygen to form carbon dioxide.
102989. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
102990. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
102991. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
102992. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
102993. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
102994. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
102995. Phosphorus combines with oxygen to form phosphorus pentoxide.
102996. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
102997. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

102998. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

102999. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

103000. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

103001. Magnesium reacts with oxygen in air to form magnesium oxide.

103002. Sulfur reacts with oxygen to form sulfur dioxide.

103003. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

103004. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

103005. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

103006. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

103007. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

103008. On heating, hydrogen peroxide decomposes to form water and oxygen.

103009. Magnesium combines with oxygen to form magnesium oxide.

103010. Hydrogen burns in air to form water vapor and release heat.

103011. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

103012. Copper(I) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

103013. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

103014. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

103015. Calcium reacts with oxygen in air to form calcium oxide.

103016. Phosphorus reacts with oxygen to form phosphorus pentoxide.

103017. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

103018. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

103019. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

103020. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

103021. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

103022. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

103023. Iron combines with sulfur to form iron sulfide.

103024. Methane burns in air to form carbon dioxide and water vapor and release heat.

103025. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

103026. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

103027. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

103028. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

103029. Aluminium reacts with oxygen in air to form aluminium oxide.

103030. Hydrogen reacts with oxygen to form water.

103031. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

103032. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

103033. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

103034. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

103035. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

103036. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

103037. Calcium Oxide combines with water to form calcium hydroxide.

103038. Ethane burns in air to form carbon dioxide and water vapor and release heat.

103039. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

103040. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

103041. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

103042. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

103043. Zinc reacts with oxygen in air to form zinc oxide.

103044. Nitrogen reacts with oxygen to form nitrogen oxides.

103045. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

103046. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

103047. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

103048. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

103049. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

103050. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

103051. Hydrogen combines with oxygen to form water.

103052. Propane burns in air to form carbon dioxide and water vapor and release heat.

103053. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

103054. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

103055. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

103056. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

103057. Iron reacts with oxygen in air to form iron(III) oxide.

103058. Silicon reacts with oxygen to form silicon dioxide.

103059. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

103060. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

103061. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

103062. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

103063. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

103064. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

103065. Nitrogen combines with hydrogen to form ammonia.

103066. Butane burns in air to form carbon dioxide and water vapor and release heat.

103067. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

103068. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

103069. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

103070. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

103071. Copper reacts with oxygen in air to form copper(II) oxide.

103072. Carbon reacts with oxygen to form carbon dioxide.

103073. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

103074. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

103075. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

103076. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

103077. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

103078. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

103079. Sulfur combines with oxygen to form sulfur dioxide.

103080. Carbon Monoxide burns in air to form carbon dioxide and release heat.

103081. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

103082. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

103083. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

103084. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

103085. Lead reacts with oxygen in air to form lead(II) oxide.

103086. Sulfur reacts with oxygen to form sulfur dioxide.

103087. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

103088. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

103089. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

103090. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

103091. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

103092. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

103093. Carbon combines with oxygen to form carbon dioxide.

103094. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

103095. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

103096. Copper(I) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

103097. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

103098. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

103099. Magnesium reacts with oxygen in air to form magnesium oxide.

103100. Phosphorus reacts with oxygen to form phosphorus pentoxide.

103101. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

103102. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

103103. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

103104. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

103105. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

103106. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

103107. Phosphorus combines with oxygen to form phosphorus pentoxide.

103108. Hydrogen burns in air to form water vapor and release heat.

103109. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

103110. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

103111. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

103112. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

103113. Calcium reacts with oxygen in air to form calcium oxide.

103114. Hydrogen reacts with oxygen to form water.

103115. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

103116. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

103117. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

103118. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

103119. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

103120. On heating, hydrogen peroxide decomposes to form water and oxygen.

103121. Magnesium combines with oxygen to form magnesium oxide.

103122. Methane burns in air to form carbon dioxide and water vapor and release heat.

103123. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

103124. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

103125. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

103126. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

103127. Aluminium reacts with oxygen in air to form aluminium oxide.

103128. Nitrogen reacts with oxygen to form nitrogen oxides.

103129. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

103130. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

103131. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

103132. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

103133. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

103134. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

103135. Iron combines with sulfur to form iron sulfide.

103136. Ethane burns in air to form carbon dioxide and water vapor and release heat.

103137. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

103138. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

103139. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

103140. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

103141. Zinc reacts with oxygen in air to form zinc oxide.

103142. Silicon reacts with oxygen to form silicon dioxide.

103143. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

103144. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

103145. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

103146. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

103147. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

103148. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

103149. Calcium Oxide combines with water to form calcium hydroxide.

103150. Propane burns in air to form carbon dioxide and water vapor and release heat.

103151. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

103152. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

103153. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.

103154. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

103155. Iron reacts with oxygen in air to form iron(III) oxide.

103156. Carbon reacts with oxygen to form carbon dioxide.

103157. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

103158. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

103159. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

103160. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

103161. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

103162. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

103163. Hydrogen combines with oxygen to form water.

103164. Butane burns in air to form carbon dioxide and water vapor and release heat.

103165. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

103166. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

103167. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.

103168. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

103169. Copper reacts with oxygen in air to form copper(II) oxide.

103170. Sulfur reacts with oxygen to form sulfur dioxide.

103171. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

103172. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

103173. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

103174. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

103175. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

103176. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

103177. Nitrogen combines with hydrogen to form ammonia.

103178. Carbon Monoxide burns in air to form carbon dioxide and release heat.

103179. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

103180. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

103181. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
103182. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
103183. Lead reacts with oxygen in air to form lead(II) oxide.
103184. Phosphorus reacts with oxygen to form phosphorus pentoxide.
103185. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
103186. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
103187. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
103188. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
103189. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
103190. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
103191. Sulfur combines with oxygen to form sulfur dioxide.
103192. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
103193. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
103194. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103195. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
103196. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
103197. Magnesium reacts with oxygen in air to form magnesium oxide.
103198. Hydrogen reacts with oxygen to form water.
103199. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
103200. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
103201. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
103202. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
103203. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
103204. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
103205. Carbon combines with oxygen to form carbon dioxide.
103206. Hydrogen burns in air to form water vapor and release heat.
103207. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
103208. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103209. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
103210. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
103211. Calcium reacts with oxygen in air to form calcium oxide.
103212. Nitrogen reacts with oxygen to form nitrogen oxides.
103213. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
103214. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
103215. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
103216. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
103217. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
103218. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
103219. Phosphorus combines with oxygen to form phosphorus pentoxide.
103220. Methane burns in air to form carbon dioxide and water vapor and release heat.
103221. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
103222. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103223. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
103224. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
103225. Aluminium reacts with oxygen in air to form aluminium oxide.
103226. Silicon reacts with oxygen to form silicon dioxide.
103227. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
103228. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
103229. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
103230. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
103231. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
103232. On heating, hydrogen peroxide decomposes to form water and oxygen.
103233. Magnesium combines with oxygen to form magnesium oxide.
103234. Ethane burns in air to form carbon dioxide and water vapor and release heat.
103235. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
103236. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103237. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
103238. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
103239. Zinc reacts with oxygen in air to form zinc oxide.
103240. Carbon reacts with oxygen to form carbon dioxide.
103241. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
103242. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
103243. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
103244. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
103245. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
103246. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
103247. Iron combines with sulfur to form iron sulfide.
103248. Propane burns in air to form carbon dioxide and water vapor and release heat.
103249. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
103250. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103251. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
103252. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
103253. Iron reacts with oxygen in air to form iron(III) oxide.
103254. Sulfur reacts with oxygen to form sulfur dioxide.
103255. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
103256. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
103257. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
103258. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
103259. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
103260. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
103261. Calcium Oxide combines with water to form calcium hydroxide.
103262. Butane burns in air to form carbon dioxide and water vapor and release heat.
103263. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
103264. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103265. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
103266. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
103267. Copper reacts with oxygen in air to form copper(II) oxide.
103268. Phosphorus reacts with oxygen to form phosphorus pentoxide.
103269. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
103270. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
103271. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

103272. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
103273. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
103274. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
103275. Hydrogen combines with oxygen to form water.
103276. Carbon Monoxide burns in air to form carbon dioxide and release heat.
103277. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
103278. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103279. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
103280. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
103281. Lead reacts with oxygen in air to form lead(II) oxide.
103282. Hydrogen reacts with oxygen to form water.
103283. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
103284. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
103285. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
103286. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
103287. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
103288. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
103289. Nitrogen combines with hydrogen to form ammonia.
103290. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
103291. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
103292. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103293. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
103294. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
103295. Magnesium reacts with oxygen in air to form magnesium oxide.
103296. Nitrogen reacts with oxygen to form nitrogen oxides.
103297. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
103298. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
103299. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
103300. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
103301. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
103302. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
103303. Sulfur combines with oxygen to form sulfur dioxide.
103304. Hydrogen burns in air to form water vapor and release heat.
103305. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
103306. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103307. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
103308. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
103309. Calcium reacts with oxygen in air to form calcium oxide.
103310. Silicon reacts with oxygen to form silicon dioxide.
103311. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
103312. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
103313. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
103314. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
103315. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
103316. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
103317. Carbon combines with oxygen to form carbon dioxide.
103318. Methane burns in air to form carbon dioxide and water vapor and release heat.
103319. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
103320. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103321. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
103322. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
103323. Aluminium reacts with oxygen in air to form aluminium oxide.
103324. Carbon reacts with oxygen to form carbon dioxide.
103325. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
103326. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
103327. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
103328. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
103329. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
103330. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
103331. Phosphorus combines with oxygen to form phosphorus pentoxide.
103332. Ethane burns in air to form carbon dioxide and water vapor and release heat.
103333. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
103334. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103335. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
103336. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
103337. Zinc reacts with oxygen in air to form zinc oxide.
103338. Sulfur reacts with oxygen to form sulfur dioxide.
103339. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
103340. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
103341. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
103342. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
103343. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
103344. On heating, hydrogen peroxide decomposes to form water and oxygen.
103345. Magnesium combines with oxygen to form magnesium oxide.
103346. Propane burns in air to form carbon dioxide and water vapor and release heat.
103347. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
103348. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103349. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
103350. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
103351. Iron reacts with oxygen in air to form iron(III) oxide.
103352. Phosphorus reacts with oxygen to form phosphorus pentoxide.
103353. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
103354. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
103355. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
103356. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
103357. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
103358. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
103359. Iron combines with sulfur to form iron sulfide.
103360. Butane burns in air to form carbon dioxide and water vapor and release heat.
103361. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
103362. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

103363. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
103364. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
103365. Copper reacts with oxygen in air to form copper(II) oxide.
103366. Hydrogen reacts with oxygen to form water.
103367. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
103368. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
103369. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
103370. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
103371. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
103372. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
103373. Calcium Oxide combines with water to form calcium hydroxide.
103374. Carbon Monoxide burns in air to form carbon dioxide and release heat.
103375. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
103376. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103377. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
103378. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
103379. Lead reacts with oxygen in air to form lead(II) oxide.
103380. Nitrogen reacts with oxygen to form nitrogen oxides.
103381. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
103382. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
103383. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
103384. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
103385. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
103386. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
103387. Hydrogen combines with oxygen to form water.
103388. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
103389. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
103390. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103391. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
103392. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
103393. Magnesium reacts with oxygen in air to form magnesium oxide.
103394. Silicon reacts with oxygen to form silicon dioxide.
103395. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
103396. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
103397. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
103398. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
103399. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
103400. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
103401. Nitrogen combines with hydrogen to form ammonia.
103402. Hydrogen burns in air to form water vapor and release heat.
103403. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
103404. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103405. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
103406. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
103407. Calcium reacts with oxygen in air to form calcium oxide.
103408. Carbon reacts with oxygen to form carbon dioxide.
103409. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
103410. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
103411. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
103412. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
103413. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
103414. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
103415. Sulfur combines with oxygen to form sulfur dioxide.
103416. Methane burns in air to form carbon dioxide and water vapor and release heat.
103417. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
103418. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103419. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
103420. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
103421. Aluminium reacts with oxygen in air to form aluminium oxide.
103422. Sulfur reacts with oxygen to form sulfur dioxide.
103423. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
103424. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
103425. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
103426. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
103427. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
103428. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
103429. Carbon combines with oxygen to form carbon dioxide.
103430. Ethane burns in air to form carbon dioxide and water vapor and release heat.
103431. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
103432. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103433. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
103434. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
103435. Zinc reacts with oxygen in air to form zinc oxide.
103436. Phosphorus reacts with oxygen to form phosphorus pentoxide.
103437. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
103438. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
103439. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
103440. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
103441. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
103442. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
103443. Phosphorus combines with oxygen to form phosphorus pentoxide.
103444. Propane burns in air to form carbon dioxide and water vapor and release heat.
103445. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
103446. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103447. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
103448. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
103449. Iron reacts with oxygen in air to form iron(III) oxide.
103450. Hydrogen reacts with oxygen to form water.
103451. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
103452. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
103453. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

103454. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
103455. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
103456. On heating, hydrogen peroxide decomposes to form water and oxygen.
103457. Magnesium combines with oxygen to form magnesium oxide.
103458. Butane burns in air to form carbon dioxide and water vapor and release heat.
103459. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
103460. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103461. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
103462. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
103463. Copper reacts with oxygen in air to form copper(II) oxide.
103464. Nitrogen reacts with oxygen to form nitrogen oxides.
103465. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
103466. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
103467. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
103468. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
103469. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
103470. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
103471. Iron combines with sulfur to form iron sulfide.
103472. Carbon Monoxide burns in air to form carbon dioxide and release heat.
103473. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
103474. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103475. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
103476. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
103477. Lead reacts with oxygen in air to form lead(II) oxide.
103478. Silicon reacts with oxygen to form silicon dioxide.
103479. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
103480. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
103481. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
103482. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
103483. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
103484. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
103485. Calcium Oxide combines with water to form calcium hydroxide.
103486. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
103487. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
103488. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103489. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
103490. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
103491. Magnesium reacts with oxygen in air to form magnesium oxide.
103492. Carbon reacts with oxygen to form carbon dioxide.
103493. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
103494. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
103495. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
103496. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
103497. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
103498. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
103499. Hydrogen combines with oxygen to form water.
103500. Hydrogen burns in air to form water vapor and release heat.
103501. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
103502. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103503. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
103504. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
103505. Calcium reacts with oxygen in air to form calcium oxide.
103506. Sulfur reacts with oxygen to form sulfur dioxide.
103507. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
103508. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
103509. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
103510. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
103511. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
103512. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
103513. Nitrogen combines with hydrogen to form ammonia.
103514. Methane burns in air to form carbon dioxide and water vapor and release heat.
103515. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
103516. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103517. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
103518. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
103519. Aluminium reacts with oxygen in air to form aluminium oxide.
103520. Phosphorus reacts with oxygen to form phosphorus pentoxide.
103521. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
103522. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
103523. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
103524. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
103525. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
103526. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
103527. Sulfur combines with oxygen to form sulfur dioxide.
103528. Ethane burns in air to form carbon dioxide and water vapor and release heat.
103529. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
103530. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103531. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
103532. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
103533. Zinc reacts with oxygen in air to form zinc oxide.
103534. Hydrogen reacts with oxygen to form water.
103535. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
103536. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
103537. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
103538. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
103539. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
103540. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
103541. Carbon combines with oxygen to form carbon dioxide.
103542. Propane burns in air to form carbon dioxide and water vapor and release heat.
103543. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
103544. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103545. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.

103546. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
103547. Iron reacts with oxygen in air to form iron(III) oxide.
103548. Nitrogen reacts with oxygen to form nitrogen oxides.
103549. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
103550. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
103551. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
103552. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
103553. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
103554. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
103555. Phosphorus combines with oxygen to form phosphorus pentoxide.
103556. Butane burns in air to form carbon dioxide and water vapor and release heat.
103557. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
103558. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103559. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
103560. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
103561. Copper reacts with oxygen in air to form copper(II) oxide.
103562. Silicon reacts with oxygen to form silicon dioxide.
103563. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
103564. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
103565. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
103566. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
103567. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
103568. On heating, hydrogen peroxide decomposes to form water and oxygen.
103569. Magnesium combines with oxygen to form magnesium oxide.
103570. Carbon Monoxide burns in air to form carbon dioxide and release heat.
103571. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
103572. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103573. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
103574. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
103575. Lead reacts with oxygen in air to form lead(II) oxide.
103576. Carbon reacts with oxygen to form carbon dioxide.
103577. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
103578. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
103579. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
103580. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
103581. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
103582. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
103583. Iron combines with sulfur to form iron sulfide.
103584. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
103585. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
103586. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103587. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
103588. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
103589. Magnesium reacts with oxygen in air to form magnesium oxide.
103590. Sulfur reacts with oxygen to form sulfur dioxide.
103591. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
103592. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
103593. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
103594. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
103595. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
103596. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
103597. Calcium Oxide combines with water to form calcium hydroxide.
103598. Hydrogen burns in air to form water vapor and release heat.
103599. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
103600. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103601. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
103602. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
103603. Calcium reacts with oxygen in air to form calcium oxide.
103604. Phosphorus reacts with oxygen to form phosphorus pentoxide.
103605. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
103606. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
103607. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
103608. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
103609. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
103610. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
103611. Hydrogen combines with oxygen to form water.
103612. Methane burns in air to form carbon dioxide and water vapor and release heat.
103613. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
103614. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103615. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
103616. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
103617. Aluminium reacts with oxygen in air to form aluminium oxide.
103618. Hydrogen reacts with oxygen to form water.
103619. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
103620. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
103621. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
103622. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
103623. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
103624. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
103625. Nitrogen combines with hydrogen to form ammonia.
103626. Ethane burns in air to form carbon dioxide and water vapor and release heat.
103627. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
103628. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103629. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
103630. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
103631. Zinc reacts with oxygen in air to form zinc oxide.
103632. Nitrogen reacts with oxygen to form nitrogen oxides.
103633. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
103634. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
103635. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
103636. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
103637. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

103638. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
103639. Sulfur combines with oxygen to form sulfur dioxide.
103640. Propane burns in air to form carbon dioxide and water vapor and release heat.
103641. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
103642. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103643. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
103644. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
103645. Iron reacts with oxygen in air to form iron(III) oxide.
103646. Silicon reacts with oxygen to form silicon dioxide.
103647. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
103648. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
103649. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
103650. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
103651. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
103652. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
103653. Carbon combines with oxygen to form carbon dioxide.
103654. Butane burns in air to form carbon dioxide and water vapor and release heat.
103655. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
103656. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103657. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
103658. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
103659. Copper reacts with oxygen in air to form copper(II) oxide.
103660. Carbon reacts with oxygen to form carbon dioxide.
103661. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
103662. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
103663. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
103664. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
103665. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
103666. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
103667. Phosphorus combines with oxygen to form phosphorus pentoxide.
103668. Carbon Monoxide burns in air to form carbon dioxide and release heat.
103669. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
103670. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103671. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
103672. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
103673. Lead reacts with oxygen in air to form lead(II) oxide.
103674. Sulfur reacts with oxygen to form sulfur dioxide.
103675. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
103676. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
103677. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
103678. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
103679. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
103680. On heating, hydrogen peroxide decomposes to form water and oxygen.
103681. Magnesium combines with oxygen to form magnesium oxide.
103682. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
103683. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
103684. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103685. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
103686. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
103687. Magnesium reacts with oxygen in air to form magnesium oxide.
103688. Phosphorus reacts with oxygen to form phosphorus pentoxide.
103689. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
103690. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
103691. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
103692. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
103693. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
103694. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
103695. Iron combines with sulfur to form iron sulfide.
103696. Hydrogen burns in air to form water vapor and release heat.
103697. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
103698. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103699. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
103700. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
103701. Calcium reacts with oxygen in air to form calcium oxide.
103702. Hydrogen reacts with oxygen to form water.
103703. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
103704. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
103705. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
103706. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
103707. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
103708. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
103709. Calcium Oxide combines with water to form calcium hydroxide.
103710. Methane burns in air to form carbon dioxide and water vapor and release heat.
103711. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
103712. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103713. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
103714. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
103715. Aluminium reacts with oxygen in air to form aluminium oxide.
103716. Nitrogen reacts with oxygen to form nitrogen oxides.
103717. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
103718. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
103719. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
103720. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
103721. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
103722. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
103723. Hydrogen combines with oxygen to form water.
103724. Ethane burns in air to form carbon dioxide and water vapor and release heat.
103725. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
103726. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103727. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
103728. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

103729. Zinc reacts with oxygen in air to form zinc oxide.
103730. Silicon reacts with oxygen to form silicon dioxide.
103731. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
103732. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
103733. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
103734. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
103735. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
103736. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
103737. Nitrogen combines with hydrogen to form ammonia.
103738. Propane burns in air to form carbon dioxide and water vapor and release heat.
103739. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
103740. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103741. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
103742. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
103743. Iron reacts with oxygen in air to form iron(III) oxide.
103744. Carbon reacts with oxygen to form carbon dioxide.
103745. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
103746. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
103747. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
103748. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
103749. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
103750. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
103751. Sulfur combines with oxygen to form sulfur dioxide.
103752. Butane burns in air to form carbon dioxide and water vapor and release heat.
103753. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
103754. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103755. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
103756. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
103757. Copper reacts with oxygen in air to form copper(II) oxide.
103758. Sulfur reacts with oxygen to form sulfur dioxide.
103759. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
103760. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
103761. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
103762. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
103763. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
103764. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
103765. Carbon combines with oxygen to form carbon dioxide.
103766. Carbon Monoxide burns in air to form carbon dioxide and release heat.
103767. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
103768. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103769. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
103770. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
103771. Lead reacts with oxygen in air to form lead(II) oxide.
103772. Phosphorus reacts with oxygen to form phosphorus pentoxide.
103773. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
103774. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
103775. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
103776. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
103777. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
103778. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
103779. Phosphorus combines with oxygen to form phosphorus pentoxide.
103780. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
103781. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
103782. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103783. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
103784. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
103785. Magnesium reacts with oxygen in air to form magnesium oxide.
103786. Hydrogen reacts with oxygen to form water.
103787. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
103788. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
103789. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
103790. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
103791. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
103792. On heating, hydrogen peroxide decomposes to form water and oxygen.
103793. Magnesium combines with oxygen to form magnesium oxide.
103794. Hydrogen burns in air to form water vapor and release heat.
103795. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
103796. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103797. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
103798. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
103799. Calcium reacts with oxygen in air to form calcium oxide.
103800. Nitrogen reacts with oxygen to form nitrogen oxides.
103801. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
103802. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
103803. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
103804. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
103805. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
103806. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
103807. Iron combines with sulfur to form iron sulfide.
103808. Methane burns in air to form carbon dioxide and water vapor and release heat.
103809. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
103810. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103811. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
103812. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
103813. Aluminium reacts with oxygen in air to form aluminium oxide.
103814. Silicon reacts with oxygen to form silicon dioxide.
103815. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
103816. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
103817. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
103818. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
103819. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
103820. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
103821. Calcium Oxide combines with water to form calcium hydroxide.

103822. Ethane burns in air to form carbon dioxide and water vapor and release heat.
103823. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
103824. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103825. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
103826. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
103827. Zinc reacts with oxygen in air to form zinc oxide.
103828. Carbon reacts with oxygen to form carbon dioxide.
103829. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
103830. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
103831. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
103832. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
103833. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
103834. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
103835. Hydrogen combines with oxygen to form water.
103836. Propane burns in air to form carbon dioxide and water vapor and release heat.
103837. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
103838. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103839. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
103840. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
103841. Iron reacts with oxygen in air to form iron(III) oxide.
103842. Sulfur reacts with oxygen to form sulfur dioxide.
103843. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
103844. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
103845. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
103846. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
103847. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
103848. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
103849. Nitrogen combines with hydrogen to form ammonia.
103850. Butane burns in air to form carbon dioxide and water vapor and release heat.
103851. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
103852. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103853. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
103854. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
103855. Copper reacts with oxygen in air to form copper(II) oxide.
103856. Phosphorus reacts with oxygen to form phosphorus pentoxide.
103857. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
103858. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
103859. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
103860. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
103861. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
103862. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
103863. Sulfur combines with oxygen to form sulfur dioxide.
103864. Carbon Monoxide burns in air to form carbon dioxide and release heat.
103865. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
103866. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103867. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
103868. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
103869. Lead reacts with oxygen in air to form lead(II) oxide.
103870. Hydrogen reacts with oxygen to form water.
103871. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
103872. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
103873. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
103874. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
103875. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
103876. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
103877. Carbon combines with oxygen to form carbon dioxide.
103878. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
103879. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
103880. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103881. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
103882. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
103883. Magnesium reacts with oxygen in air to form magnesium oxide.
103884. Nitrogen reacts with oxygen to form nitrogen oxides.
103885. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
103886. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
103887. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
103888. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
103889. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
103890. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
103891. Phosphorus combines with oxygen to form phosphorus pentoxide.
103892. Hydrogen burns in air to form water vapor and release heat.
103893. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
103894. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103895. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
103896. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
103897. Calcium reacts with oxygen in air to form calcium oxide.
103898. Silicon reacts with oxygen to form silicon dioxide.
103899. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
103900. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
103901. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
103902. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
103903. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
103904. On heating, hydrogen peroxide decomposes to form water and oxygen.
103905. Magnesium combines with oxygen to form magnesium oxide.
103906. Methane burns in air to form carbon dioxide and water vapor and release heat.
103907. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
103908. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103909. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
103910. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
103911. Aluminium reacts with oxygen in air to form aluminium oxide.
103912. Carbon reacts with oxygen to form carbon dioxide.

103913. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
103914. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
103915. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
103916. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
103917. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
103918. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
103919. Iron combines with sulfur to form iron sulfide.
103920. Ethane burns in air to form carbon dioxide and water vapor and release heat.
103921. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
103922. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103923. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
103924. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
103925. Zinc reacts with oxygen in air to form zinc oxide.
103926. Sulfur reacts with oxygen to form sulfur dioxide.
103927. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
103928. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
103929. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
103930. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
103931. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
103932. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
103933. Calcium Oxide combines with water to form calcium hydroxide.
103934. Propane burns in air to form carbon dioxide and water vapor and release heat.
103935. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
103936. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103937. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
103938. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
103939. Iron reacts with oxygen in air to form iron(III) oxide.
103940. Phosphorus reacts with oxygen to form phosphorus pentoxide.
103941. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
103942. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
103943. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
103944. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
103945. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
103946. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
103947. Hydrogen combines with oxygen to form water.
103948. Butane burns in air to form carbon dioxide and water vapor and release heat.
103949. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
103950. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103951. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
103952. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
103953. Copper reacts with oxygen in air to form copper(II) oxide.
103954. Hydrogen reacts with oxygen to form water.
103955. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
103956. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
103957. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
103958. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
103959. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
103960. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
103961. Nitrogen combines with hydrogen to form ammonia.
103962. Carbon Monoxide burns in air to form carbon dioxide and release heat.
103963. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
103964. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103965. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
103966. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
103967. Lead reacts with oxygen in air to form lead(II) oxide.
103968. Nitrogen reacts with oxygen to form nitrogen oxides.
103969. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
103970. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
103971. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
103972. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
103973. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
103974. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
103975. Sulfur combines with oxygen to form sulfur dioxide.
103976. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
103977. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
103978. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103979. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
103980. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
103981. Magnesium reacts with oxygen in air to form magnesium oxide.
103982. Silicon reacts with oxygen to form silicon dioxide.
103983. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
103984. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
103985. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
103986. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
103987. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
103988. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
103989. Carbon combines with oxygen to form carbon dioxide.
103990. Hydrogen burns in air to form water vapor and release heat.
103991. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
103992. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
103993. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
103994. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
103995. Calcium reacts with oxygen in air to form calcium oxide.
103996. Carbon reacts with oxygen to form carbon dioxide.
103997. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
103998. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
103999. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
104000. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
104001. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
104002. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
104003. Phosphorus combines with oxygen to form phosphorus pentoxide.

104004. Methane burns in air to form carbon dioxide and water vapor and release heat.

104005. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

104006. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104007. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

104008. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

104009. Aluminium reacts with oxygen in air to form aluminium oxide.

104010. Sulfur reacts with oxygen to form sulfur dioxide.

104011. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

104012. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

104013. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

104014. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

104015. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

104016. On heating, hydrogen peroxide decomposes to form water and oxygen.

104017. Magnesium combines with oxygen to form magnesium oxide.

104018. Ethane burns in air to form carbon dioxide and water vapor and release heat.

104019. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

104020. Copper(I) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104021. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

104022. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

104023. Zinc reacts with oxygen in air to form zinc oxide.

104024. Phosphorus reacts with oxygen to form phosphorus pentoxide.

104025. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

104026. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

104027. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

104028. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

104029. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

104030. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

104031. Iron combines with sulfur to form iron sulfide.

104032. Propane burns in air to form carbon dioxide and water vapor and release heat.

104033. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

104034. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104035. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

104036. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

104037. Iron reacts with oxygen in air to form iron(III) oxide.

104038. Hydrogen reacts with oxygen to form water.

104039. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

104040. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

104041. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

104042. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

104043. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

104044. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

104045. Calcium Oxide combines with water to form calcium hydroxide.

104046. Butane burns in air to form carbon dioxide and water vapor and release heat.

104047. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

104048. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104049. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

104050. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

104051. Copper reacts with oxygen in air to form copper(II) oxide.

104052. Nitrogen reacts with oxygen to form nitrogen oxides.

104053. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

104054. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

104055. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

104056. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

104057. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

104058. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

104059. Hydrogen combines with oxygen to form water.

104060. Carbon Monoxide burns in air to form carbon dioxide and release heat.

104061. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

104062. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104063. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

104064. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

104065. Lead reacts with oxygen in air to form lead(II) oxide.

104066. Silicon reacts with oxygen to form silicon dioxide.

104067. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

104068. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

104069. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

104070. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

104071. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

104072. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

104073. Nitrogen combines with hydrogen to form ammonia.

104074. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

104075. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

104076. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104077. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

104078. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

104079. Magnesium reacts with oxygen in air to form magnesium oxide.

104080. Carbon reacts with oxygen to form carbon dioxide.

104081. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

104082. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

104083. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

104084. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

104085. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

104086. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

104087. Sulfur combines with oxygen to form sulfur dioxide.

104088. Hydrogen burns in air to form water vapor and release heat.

104089. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

104090. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104091. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

104092. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

104093. Calcium reacts with oxygen in air to form calcium oxide.

104094. Sulfur reacts with oxygen to form sulfur dioxide.

104095. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
104096. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
104097. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
104098. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
104099. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
104100. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
104101. Carbon combines with oxygen to form carbon dioxide.
104102. Methane burns in air to form carbon dioxide and water vapor and release heat.
104103. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
104104. Copper(I) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104105. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
104106. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
104107. Aluminium reacts with oxygen in air to form aluminium oxide.
104108. Phosphorus reacts with oxygen to form phosphorus pentoxide.
104109. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
104110. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
104111. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
104112. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
104113. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
104114. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
104115. Phosphorus combines with oxygen to form phosphorus pentoxide.
104116. Ethane burns in air to form carbon dioxide and water vapor and release heat.
104117. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
104118. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104119. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
104120. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
104121. Zinc reacts with oxygen in air to form zinc oxide.
104122. Hydrogen reacts with oxygen to form water.
104123. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
104124. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
104125. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
104126. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
104127. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
104128. On heating, hydrogen peroxide decomposes to form water and oxygen.
104129. Magnesium combines with oxygen to form magnesium oxide.
104130. Propane burns in air to form carbon dioxide and water vapor and release heat.
104131. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
104132. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104133. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
104134. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
104135. Iron reacts with oxygen in air to form iron(III) oxide.
104136. Nitrogen reacts with oxygen to form nitrogen oxides.
104137. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
104138. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
104139. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
104140. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
104141. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
104142. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
104143. Iron combines with sulfur to form iron sulfide.
104144. Butane burns in air to form carbon dioxide and water vapor and release heat.
104145. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
104146. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104147. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
104148. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
104149. Copper reacts with oxygen in air to form copper(II) oxide.
104150. Silicon reacts with oxygen to form silicon dioxide.
104151. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
104152. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
104153. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
104154. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
104155. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
104156. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
104157. Calcium Oxide combines with water to form calcium hydroxide.
104158. Carbon Monoxide burns in air to form carbon dioxide and release heat.
104159. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
104160. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104161. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
104162. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
104163. Lead reacts with oxygen in air to form lead(II) oxide.
104164. Carbon reacts with oxygen to form carbon dioxide.
104165. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
104166. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
104167. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
104168. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
104169. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
104170. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
104171. Hydrogen combines with oxygen to form water.
104172. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
104173. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
104174. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104175. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
104176. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
104177. Magnesium reacts with oxygen in air to form magnesium oxide.
104178. Sulfur reacts with oxygen to form sulfur dioxide.
104179. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
104180. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
104181. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
104182. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
104183. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
104184. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
104185. Nitrogen combines with hydrogen to form ammonia.
104186. Hydrogen burns in air to form water vapor and release heat.

104187. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
104188. Copper(I) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104189. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
104190. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
104191. Calcium reacts with oxygen in air to form calcium oxide.
104192. Phosphorus reacts with oxygen to form phosphorus pentoxide.
104193. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
104194. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
104195. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
104196. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
104197. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
104198. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
104199. Sulfur combines with oxygen to form sulfur dioxide.
104200. Methane burns in air to form carbon dioxide and water vapor and release heat.
104201. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
104202. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104203. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
104204. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
104205. Aluminium reacts with oxygen in air to form aluminium oxide.
104206. Hydrogen reacts with oxygen to form water.
104207. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
104208. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
104209. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
104210. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
104211. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
104212. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
104213. Carbon combines with oxygen to form carbon dioxide.
104214. Ethane burns in air to form carbon dioxide and water vapor and release heat.
104215. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
104216. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104217. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
104218. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
104219. Zinc reacts with oxygen in air to form zinc oxide.
104220. Nitrogen reacts with oxygen to form nitrogen oxides.
104221. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
104222. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
104223. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
104224. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
104225. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
104226. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
104227. Phosphorus combines with oxygen to form phosphorus pentoxide.
104228. Propane burns in air to form carbon dioxide and water vapor and release heat.
104229. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
104230. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104231. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
104232. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
104233. Iron reacts with oxygen in air to form iron(III) oxide.
104234. Silicon reacts with oxygen to form silicon dioxide.
104235. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
104236. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
104237. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
104238. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
104239. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
104240. On heating, hydrogen peroxide decomposes to form water and oxygen.
104241. Magnesium combines with oxygen to form magnesium oxide.
104242. Butane burns in air to form carbon dioxide and water vapor and release heat.
104243. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
104244. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104245. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
104246. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
104247. Copper reacts with oxygen in air to form copper(II) oxide.
104248. Carbon reacts with oxygen to form carbon dioxide.
104249. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
104250. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
104251. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
104252. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
104253. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
104254. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
104255. Iron combines with sulfur to form iron sulfide.
104256. Carbon Monoxide burns in air to form carbon dioxide and release heat.
104257. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
104258. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104259. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
104260. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
104261. Lead reacts with oxygen in air to form lead(II) oxide.
104262. Sulfur reacts with oxygen to form sulfur dioxide.
104263. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
104264. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
104265. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
104266. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
104267. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
104268. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
104269. Calcium Oxide combines with water to form calcium hydroxide.
104270. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
104271. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
104272. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104273. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
104274. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
104275. Magnesium reacts with oxygen in air to form magnesium oxide.
104276. Phosphorus reacts with oxygen to form phosphorus pentoxide.
104277. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

104278. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

104279. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

104280. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

104281. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

104282. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

104283. Hydrogen combines with oxygen to form water.

104284. Hydrogen burns in air to form water vapor and release heat.

104285. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

104286. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104287. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

104288. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

104289. Calcium reacts with oxygen in air to form calcium oxide.

104290. Hydrogen reacts with oxygen to form water.

104291. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

104292. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

104293. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

104294. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

104295. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

104296. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

104297. Nitrogen combines with hydrogen to form ammonia.

104298. Methane burns in air to form carbon dioxide and water vapor and release heat.

104299. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

104300. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104301. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

104302. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

104303. Aluminium reacts with oxygen in air to form aluminium oxide.

104304. Nitrogen reacts with oxygen to form nitrogen oxides.

104305. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

104306. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

104307. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

104308. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

104309. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

104310. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

104311. Sulfur combines with oxygen to form sulfur dioxide.

104312. Ethane burns in air to form carbon dioxide and water vapor and release heat.

104313. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

104314. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104315. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.

104316. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

104317. Zinc reacts with oxygen in air to form zinc oxide.

104318. Silicon reacts with oxygen to form silicon dioxide.

104319. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

104320. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

104321. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

104322. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

104323. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

104324. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

104325. Carbon combines with oxygen to form carbon dioxide.

104326. Propane burns in air to form carbon dioxide and water vapor and release heat.

104327. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

104328. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104329. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.

104330. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

104331. Iron reacts with oxygen in air to form iron(III) oxide.

104332. Carbon reacts with oxygen to form carbon dioxide.

104333. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

104334. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

104335. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

104336. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

104337. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

104338. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

104339. Phosphorus combines with oxygen to form phosphorus pentoxide.

104340. Butane burns in air to form carbon dioxide and water vapor and release heat.

104341. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

104342. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104343. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

104344. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

104345. Copper reacts with oxygen in air to form copper(II) oxide.

104346. Sulfur reacts with oxygen to form sulfur dioxide.

104347. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

104348. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

104349. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

104350. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

104351. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

104352. On heating, hydrogen peroxide decomposes to form water and oxygen.

104353. Magnesium combines with oxygen to form magnesium oxide.

104354. Carbon Monoxide burns in air to form carbon dioxide and release heat.

104355. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

104356. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104357. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

104358. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

104359. Lead reacts with oxygen in air to form lead(II) oxide.

104360. Phosphorus reacts with oxygen to form phosphorus pentoxide.

104361. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

104362. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

104363. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

104364. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

104365. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

104366. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

104367. Iron combines with sulfur to form iron sulfide.

104368. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

104369. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

104370. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104371. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

104372. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

104373. Magnesium reacts with oxygen in air to form magnesium oxide.

104374. Hydrogen reacts with oxygen to form water.

104375. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

104376. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

104377. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

104378. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

104379. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

104380. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

104381. Calcium Oxide combines with water to form calcium hydroxide.

104382. Hydrogen burns in air to form water vapor and release heat.

104383. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

104384. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104385. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

104386. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

104387. Calcium reacts with oxygen in air to form calcium oxide.

104388. Nitrogen reacts with oxygen to form nitrogen oxides.

104389. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

104390. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

104391. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

104392. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

104393. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

104394. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

104395. Hydrogen combines with oxygen to form water.

104396. Methane burns in air to form carbon dioxide and water vapor and release heat.

104397. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

104398. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104399. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

104400. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

104401. Aluminium reacts with oxygen in air to form aluminium oxide.

104402. Silicon reacts with oxygen to form silicon dioxide.

104403. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

104404. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

104405. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

104406. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

104407. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

104408. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

104409. Nitrogen combines with hydrogen to form ammonia.

104410. Ethane burns in air to form carbon dioxide and water vapor and release heat.

104411. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

104412. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104413. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

104414. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

104415. Zinc reacts with oxygen in air to form zinc oxide.

104416. Carbon reacts with oxygen to form carbon dioxide.

104417. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

104418. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

104419. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

104420. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

104421. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

104422. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

104423. Sulfur combines with oxygen to form sulfur dioxide.

104424. Propane burns in air to form carbon dioxide and water vapor and release heat.

104425. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

104426. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104427. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

104428. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

104429. Iron reacts with oxygen in air to form iron(III) oxide.

104430. Sulfur reacts with oxygen to form sulfur dioxide.

104431. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

104432. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

104433. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

104434. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

104435. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

104436. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

104437. Carbon combines with oxygen to form carbon dioxide.

104438. Butane burns in air to form carbon dioxide and water vapor and release heat.

104439. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

104440. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104441. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

104442. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

104443. Copper reacts with oxygen in air to form copper(II) oxide.

104444. Phosphorus reacts with oxygen to form phosphorus pentoxide.

104445. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

104446. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

104447. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

104448. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

104449. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

104450. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

104451. Phosphorus combines with oxygen to form phosphorus pentoxide.

104452. Carbon Monoxide burns in air to form carbon dioxide and release heat.

104453. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

104454. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104455. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

104456. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

104457. Lead reacts with oxygen in air to form lead(II) oxide.

104458. Hydrogen reacts with oxygen to form water.

104459. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

104460. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
104461. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
104462. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
104463. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
104464. On heating, hydrogen peroxide decomposes to form water and oxygen.
104465. Magnesium combines with oxygen to form magnesium oxide.
104466. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
104467. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
104468. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104469. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
104470. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
104471. Magnesium reacts with oxygen in air to form magnesium oxide.
104472. Nitrogen reacts with oxygen to form nitrogen oxides.
104473. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
104474. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
104475. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
104476. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
104477. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
104478. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
104479. Iron combines with sulfur to form iron sulfide.
104480. Hydrogen burns in air to form water vapor and release heat.
104481. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
104482. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104483. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
104484. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
104485. Calcium reacts with oxygen in air to form calcium oxide.
104486. Silicon reacts with oxygen to form silicon dioxide.
104487. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
104488. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
104489. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
104490. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
104491. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
104492. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
104493. Calcium Oxide combines with water to form calcium hydroxide.
104494. Methane burns in air to form carbon dioxide and water vapor and release heat.
104495. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
104496. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104497. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
104498. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
104499. Aluminium reacts with oxygen in air to form aluminium oxide.
104500. Carbon reacts with oxygen to form carbon dioxide.
104501. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
104502. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
104503. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
104504. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
104505. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
104506. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
104507. Hydrogen combines with oxygen to form water.
104508. Ethane burns in air to form carbon dioxide and water vapor and release heat.
104509. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
104510. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104511. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
104512. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
104513. Zinc reacts with oxygen in air to form zinc oxide.
104514. Sulfur reacts with oxygen to form sulfur dioxide.
104515. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
104516. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
104517. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
104518. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
104519. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
104520. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
104521. Nitrogen combines with hydrogen to form ammonia.
104522. Propane burns in air to form carbon dioxide and water vapor and release heat.
104523. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
104524. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104525. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
104526. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
104527. Iron reacts with oxygen in air to form iron(III) oxide.
104528. Phosphorus reacts with oxygen to form phosphorus pentoxide.
104529. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
104530. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
104531. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
104532. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
104533. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
104534. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
104535. Sulfur combines with oxygen to form sulfur dioxide.
104536. Butane burns in air to form carbon dioxide and water vapor and release heat.
104537. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
104538. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104539. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
104540. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
104541. Copper reacts with oxygen in air to form copper(II) oxide.
104542. Hydrogen reacts with oxygen to form water.
104543. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
104544. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
104545. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
104546. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
104547. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
104548. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
104549. Carbon combines with oxygen to form carbon dioxide.
104550. Carbon Monoxide burns in air to form carbon dioxide and release heat.

104551. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

104552. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104553. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.

104554. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

104555. Lead reacts with oxygen in air to form lead(II) oxide.

104556. Nitrogen reacts with oxygen to form nitrogen oxides.

104557. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

104558. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

104559. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

104560. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

104561. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

104562. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

104563. Phosphorus combines with oxygen to form phosphorus pentoxide.

104564. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

104565. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

104566. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104567. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.

104568. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

104569. Magnesium reacts with oxygen in air to form magnesium oxide.

104570. Silicon reacts with oxygen to form silicon dioxide.

104571. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

104572. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

104573. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

104574. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

104575. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

104576. On heating, hydrogen peroxide decomposes to form water and oxygen.

104577. Magnesium combines with oxygen to form magnesium oxide.

104578. Hydrogen burns in air to form water vapor and release heat.

104579. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

104580. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104581. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.

104582. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

104583. Calcium reacts with oxygen in air to form calcium oxide.

104584. Carbon reacts with oxygen to form carbon dioxide.

104585. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

104586. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

104587. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

104588. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

104589. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

104590. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

104591. Iron combines with sulfur to form iron sulfide.

104592. Methane burns in air to form carbon dioxide and water vapor and release heat.

104593. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

104594. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104595. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.

104596. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

104597. Aluminium reacts with oxygen in air to form aluminium oxide.

104598. Sulfur reacts with oxygen to form sulfur dioxide.

104599. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

104600. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

104601. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

104602. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

104603. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

104604. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

104605. Calcium Oxide combines with water to form calcium hydroxide.

104606. Ethane burns in air to form carbon dioxide and water vapor and release heat.

104607. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

104608. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104609. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

104610. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

104611. Zinc reacts with oxygen in air to form zinc oxide.

104612. Phosphorus reacts with oxygen to form phosphorus pentoxide.

104613. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

104614. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

104615. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

104616. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

104617. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

104618. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

104619. Hydrogen combines with oxygen to form water.

104620. Propane burns in air to form carbon dioxide and water vapor and release heat.

104621. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

104622. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104623. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

104624. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

104625. Iron reacts with oxygen in air to form iron(III) oxide.

104626. Hydrogen reacts with oxygen to form water.

104627. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

104628. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

104629. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

104630. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

104631. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

104632. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

104633. Nitrogen combines with hydrogen to form ammonia.

104634. Butane burns in air to form carbon dioxide and water vapor and release heat.

104635. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

104636. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104637. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

104638. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

104639. Copper reacts with oxygen in air to form copper(II) oxide.

104640. Nitrogen reacts with oxygen to form nitrogen oxides.

104641. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

104642. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
104643. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
104644. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
104645. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
104646. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
104647. Sulfur combines with oxygen to form sulfur dioxide.
104648. Carbon Monoxide burns in air to form carbon dioxide and release heat.
104649. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
104650. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104651. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
104652. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
104653. Lead reacts with oxygen in air to form lead(II) oxide.
104654. Silicon reacts with oxygen to form silicon dioxide.
104655. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
104656. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
104657. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
104658. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
104659. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
104660. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
104661. Carbon combines with oxygen to form carbon dioxide.
104662. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
104663. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
104664. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104665. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
104666. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
104667. Magnesium reacts with oxygen in air to form magnesium oxide.
104668. Carbon reacts with oxygen to form carbon dioxide.
104669. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
104670. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
104671. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
104672. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
104673. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
104674. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
104675. Phosphorus combines with oxygen to form phosphorus pentoxide.
104676. Hydrogen burns in air to form water vapor and release heat.
104677. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
104678. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104679. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
104680. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
104681. Calcium reacts with oxygen in air to form calcium oxide.
104682. Sulfur reacts with oxygen to form sulfur dioxide.
104683. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
104684. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
104685. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
104686. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
104687. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
104688. On heating, hydrogen peroxide decomposes to form water and oxygen.
104689. Magnesium combines with oxygen to form magnesium oxide.
104690. Methane burns in air to form carbon dioxide and water vapor and release heat.
104691. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
104692. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104693. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
104694. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
104695. Aluminium reacts with oxygen in air to form aluminium oxide.
104696. Phosphorus reacts with oxygen to form phosphorus pentoxide.
104697. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
104698. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
104699. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
104700. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
104701. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
104702. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
104703. Iron combines with sulfur to form iron sulfide.
104704. Ethane burns in air to form carbon dioxide and water vapor and release heat.
104705. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
104706. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104707. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
104708. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
104709. Zinc reacts with oxygen in air to form zinc oxide.
104710. Hydrogen reacts with oxygen to form water.
104711. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
104712. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
104713. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
104714. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
104715. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
104716. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
104717. Calcium Oxide combines with water to form calcium hydroxide.
104718. Propane burns in air to form carbon dioxide and water vapor and release heat.
104719. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
104720. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104721. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
104722. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
104723. Iron reacts with oxygen in air to form iron(III) oxide.
104724. Nitrogen reacts with oxygen to form nitrogen oxides.
104725. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
104726. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
104727. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
104728. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
104729. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
104730. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
104731. Hydrogen combines with oxygen to form water.
104732. Butane burns in air to form carbon dioxide and water vapor and release heat.

104733. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

104734. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104735. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

104736. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

104737. Copper reacts with oxygen in air to form copper(II) oxide.

104738. Silicon reacts with oxygen to form silicon dioxide.

104739. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

104740. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

104741. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

104742. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

104743. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

104744. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

104745. Nitrogen combines with hydrogen to form ammonia.

104746. Carbon Monoxide burns in air to form carbon dioxide and release heat.

104747. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

104748. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104749. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

104750. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

104751. Lead reacts with oxygen in air to form lead(II) oxide.

104752. Carbon reacts with oxygen to form carbon dioxide.

104753. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

104754. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

104755. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

104756. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

104757. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

104758. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

104759. Sulfur combines with oxygen to form sulfur dioxide.

104760. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

104761. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

104762. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104763. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

104764. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

104765. Magnesium reacts with oxygen in air to form magnesium oxide.

104766. Sulfur reacts with oxygen to form sulfur dioxide.

104767. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

104768. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

104769. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

104770. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

104771. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

104772. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

104773. Carbon combines with oxygen to form carbon dioxide.

104774. Hydrogen burns in air to form water vapor and release heat.

104775. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

104776. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104777. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

104778. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

104779. Calcium reacts with oxygen in air to form calcium oxide.

104780. Phosphorus reacts with oxygen to form phosphorus pentoxide.

104781. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

104782. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

104783. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

104784. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

104785. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

104786. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

104787. Phosphorus combines with oxygen to form phosphorus pentoxide.

104788. Methane burns in air to form carbon dioxide and water vapor and release heat.

104789. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

104790. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104791. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

104792. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

104793. Aluminium reacts with oxygen in air to form aluminium oxide.

104794. Hydrogen reacts with oxygen to form water.

104795. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

104796. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

104797. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

104798. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

104799. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

104800. On heating, hydrogen peroxide decomposes to form water and oxygen.

104801. Magnesium combines with oxygen to form magnesium oxide.

104802. Ethane burns in air to form carbon dioxide and water vapor and release heat.

104803. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

104804. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104805. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

104806. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

104807. Zinc reacts with oxygen in air to form zinc oxide.

104808. Nitrogen reacts with oxygen to form nitrogen oxides.

104809. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

104810. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

104811. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

104812. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

104813. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

104814. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

104815. Iron combines with sulfur to form iron sulfide.

104816. Propane burns in air to form carbon dioxide and water vapor and release heat.

104817. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

104818. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104819. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

104820. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

104821. Iron reacts with oxygen in air to form iron(III) oxide.

104822. Silicon reacts with oxygen to form silicon dioxide.

104823. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

104824. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

104825. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

104826. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
104827. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
104828. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
104829. Calcium Oxide combines with water to form calcium hydroxide.
104830. Butane burns in air to form carbon dioxide and water vapor and release heat.
104831. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
104832. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104833. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
104834. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
104835. Copper reacts with oxygen in air to form copper(II) oxide.
104836. Carbon reacts with oxygen to form carbon dioxide.
104837. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
104838. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
104839. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
104840. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
104841. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
104842. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
104843. Hydrogen combines with oxygen to form water.
104844. Carbon Monoxide burns in air to form carbon dioxide and release heat.
104845. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
104846. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104847. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
104848. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
104849. Lead reacts with oxygen in air to form lead(II) oxide.
104850. Sulfur reacts with oxygen to form sulfur dioxide.
104851. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
104852. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
104853. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
104854. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
104855. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
104856. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
104857. Nitrogen combines with hydrogen to form ammonia.
104858. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
104859. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
104860. Copper(I) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104861. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
104862. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
104863. Magnesium reacts with oxygen in air to form magnesium oxide.
104864. Phosphorus reacts with oxygen to form phosphorus pentoxide.
104865. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
104866. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
104867. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
104868. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
104869. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
104870. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
104871. Sulfur combines with oxygen to form sulfur dioxide.
104872. Hydrogen burns in air to form water vapor and release heat.
104873. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
104874. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104875. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
104876. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
104877. Calcium reacts with oxygen in air to form calcium oxide.
104878. Hydrogen reacts with oxygen to form water.
104879. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
104880. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
104881. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
104882. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
104883. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
104884. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
104885. Carbon combines with oxygen to form carbon dioxide.
104886. Methane burns in air to form carbon dioxide and water vapor and release heat.
104887. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
104888. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104889. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
104890. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
104891. Aluminium reacts with oxygen in air to form aluminium oxide.
104892. Nitrogen reacts with oxygen to form nitrogen oxides.
104893. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
104894. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
104895. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
104896. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
104897. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
104898. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
104899. Phosphorus combines with oxygen to form phosphorus pentoxide.
104900. Ethane burns in air to form carbon dioxide and water vapor and release heat.
104901. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
104902. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104903. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
104904. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
104905. Zinc reacts with oxygen in air to form zinc oxide.
104906. Silicon reacts with oxygen to form silicon dioxide.
104907. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
104908. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
104909. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
104910. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
104911. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
104912. On heating, hydrogen peroxide decomposes to form water and oxygen.
104913. Magnesium combines with oxygen to form magnesium oxide.
104914. Propane burns in air to form carbon dioxide and water vapor and release heat.
104915. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
104916. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

104917. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
104918. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
104919. Iron reacts with oxygen in air to form iron(III) oxide.
104920. Carbon reacts with oxygen to form carbon dioxide.
104921. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
104922. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
104923. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
104924. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
104925. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
104926. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
104927. Iron combines with sulfur to form iron sulfide.
104928. Butane burns in air to form carbon dioxide and water vapor and release heat.
104929. Copper(I) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
104930. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104931. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
104932. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
104933. Copper reacts with oxygen in air to form copper(II) oxide.
104934. Sulfur reacts with oxygen to form sulfur dioxide.
104935. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
104936. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
104937. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
104938. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
104939. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
104940. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
104941. Calcium Oxide combines with water to form calcium hydroxide.
104942. Carbon Monoxide burns in air to form carbon dioxide and release heat.
104943. Copper(I) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
104944. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104945. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
104946. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
104947. Lead reacts with oxygen in air to form lead(II) oxide.
104948. Phosphorus reacts with oxygen to form phosphorus pentoxide.
104949. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
104950. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
104951. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
104952. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
104953. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
104954. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
104955. Hydrogen combines with oxygen to form water.
104956. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
104957. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
104958. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104959. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
104960. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
104961. Magnesium reacts with oxygen in air to form magnesium oxide.
104962. Hydrogen reacts with oxygen to form water.
104963. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
104964. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
104965. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
104966. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
104967. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
104968. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
104969. Nitrogen combines with hydrogen to form ammonia.
104970. Hydrogen burns in air to form water vapor and release heat.
104971. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
104972. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104973. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
104974. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
104975. Calcium reacts with oxygen in air to form calcium oxide.
104976. Nitrogen reacts with oxygen to form nitrogen oxides.
104977. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
104978. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
104979. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
104980. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
104981. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
104982. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
104983. Sulfur combines with oxygen to form sulfur dioxide.
104984. Methane burns in air to form carbon dioxide and water vapor and release heat.
104985. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
104986. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
104987. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
104988. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
104989. Aluminium reacts with oxygen in air to form aluminium oxide.
104990. Silicon reacts with oxygen to form silicon dioxide.
104991. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
104992. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
104993. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
104994. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
104995. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
104996. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
104997. Carbon combines with oxygen to form carbon dioxide.
104998. Ethane burns in air to form carbon dioxide and water vapor and release heat.
104999. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
105000. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105001. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
105002. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
105003. Zinc reacts with oxygen in air to form zinc oxide.
105004. Carbon reacts with oxygen to form carbon dioxide.
105005. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
105006. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
105007. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

105008. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
105009. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
105010. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
105011. Phosphorus combines with oxygen to form phosphorus pentoxide.
105012. Propane burns in air to form carbon dioxide and water vapor and release heat.
105013. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
105014. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105015. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
105016. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
105017. Iron reacts with oxygen in air to form iron(III) oxide.
105018. Sulfur reacts with oxygen to form sulfur dioxide.
105019. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
105020. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
105021. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
105022. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
105023. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
105024. On heating, hydrogen peroxide decomposes to form water and oxygen.
105025. Magnesium combines with oxygen to form magnesium oxide.
105026. Butane burns in air to form carbon dioxide and water vapor and release heat.
105027. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
105028. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105029. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
105030. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
105031. Copper reacts with oxygen in air to form copper(II) oxide.
105032. Phosphorus reacts with oxygen to form phosphorus pentoxide.
105033. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
105034. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
105035. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
105036. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
105037. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
105038. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
105039. Iron combines with sulfur to form iron sulfide.
105040. Carbon Monoxide burns in air to form carbon dioxide and release heat.
105041. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
105042. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105043. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
105044. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
105045. Lead reacts with oxygen in air to form lead(II) oxide.
105046. Hydrogen reacts with oxygen to form water.
105047. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
105048. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
105049. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
105050. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
105051. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
105052. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
105053. Calcium Oxide combines with water to form calcium hydroxide.
105054. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
105055. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
105056. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105057. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
105058. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
105059. Magnesium reacts with oxygen in air to form magnesium oxide.
105060. Nitrogen reacts with oxygen to form nitrogen oxides.
105061. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
105062. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
105063. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
105064. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
105065. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
105066. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
105067. Hydrogen combines with oxygen to form water.
105068. Hydrogen burns in air to form water vapor and release heat.
105069. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
105070. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105071. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
105072. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
105073. Calcium reacts with oxygen in air to form calcium oxide.
105074. Silicon reacts with oxygen to form silicon dioxide.
105075. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
105076. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
105077. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
105078. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
105079. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
105080. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
105081. Nitrogen combines with hydrogen to form ammonia.
105082. Methane burns in air to form carbon dioxide and water vapor and release heat.
105083. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
105084. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105085. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
105086. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
105087. Aluminium reacts with oxygen in air to form aluminium oxide.
105088. Carbon reacts with oxygen to form carbon dioxide.
105089. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
105090. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
105091. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
105092. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
105093. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
105094. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
105095. Sulfur combines with oxygen to form sulfur dioxide.
105096. Ethane burns in air to form carbon dioxide and water vapor and release heat.
105097. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
105098. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105099. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

105100. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

105101. Zinc reacts with oxygen in air to form zinc oxide.

105102. Sulfur reacts with oxygen to form sulfur dioxide.

105103. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

105104. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

105105. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

105106. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

105107. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

105108. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

105109. Carbon combines with oxygen to form carbon dioxide.

105110. Propane burns in air to form carbon dioxide and water vapor and release heat.

105111. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

105112. Copper(I) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105113. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

105114. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

105115. Iron reacts with oxygen in air to form iron(III) oxide.

105116. Phosphorus reacts with oxygen to form phosphorus pentoxide.

105117. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

105118. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

105119. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

105120. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

105121. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

105122. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

105123. Phosphorus combines with oxygen to form phosphorus pentoxide.

105124. Butane burns in air to form carbon dioxide and water vapor and release heat.

105125. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

105126. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105127. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

105128. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

105129. Copper reacts with oxygen in air to form copper(II) oxide.

105130. Hydrogen reacts with oxygen to form water.

105131. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

105132. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

105133. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

105134. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

105135. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

105136. On heating, hydrogen peroxide decomposes to form water and oxygen.

105137. Magnesium combines with oxygen to form magnesium oxide.

105138. Carbon Monoxide burns in air to form carbon dioxide and release heat.

105139. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

105140. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105141. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

105142. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

105143. Lead reacts with oxygen in air to form lead(II) oxide.

105144. Nitrogen reacts with oxygen to form nitrogen oxides.

105145. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

105146. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

105147. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

105148. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

105149. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

105150. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

105151. Iron combines with sulfur to form iron sulfide.

105152. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

105153. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

105154. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105155. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

105156. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

105157. Magnesium reacts with oxygen in air to form magnesium oxide.

105158. Silicon reacts with oxygen to form silicon dioxide.

105159. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

105160. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

105161. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

105162. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

105163. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

105164. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

105165. Calcium Oxide combines with water to form calcium hydroxide.

105166. Hydrogen burns in air to form water vapor and release heat.

105167. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

105168. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105169. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.

105170. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

105171. Calcium reacts with oxygen in air to form calcium oxide.

105172. Carbon reacts with oxygen to form carbon dioxide.

105173. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

105174. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

105175. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

105176. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

105177. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

105178. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

105179. Hydrogen combines with oxygen to form water.

105180. Methane burns in air to form carbon dioxide and water vapor and release heat.

105181. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

105182. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105183. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.

105184. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

105185. Aluminium reacts with oxygen in air to form aluminium oxide.

105186. Sulfur reacts with oxygen to form sulfur dioxide.

105187. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

105188. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

105189. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

105190. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

105191. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

105192. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
105193. Nitrogen combines with hydrogen to form ammonia.
105194. Ethane burns in air to form carbon dioxide and water vapor and release heat.
105195. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
105196. Copper(I) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105197. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
105198. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
105199. Zinc reacts with oxygen in air to form zinc oxide.
105200. Phosphorus reacts with oxygen to form phosphorus pentoxide.
105201. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
105202. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
105203. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
105204. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
105205. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
105206. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
105207. Sulfur combines with oxygen to form sulfur dioxide.
105208. Propane burns in air to form carbon dioxide and water vapor and release heat.
105209. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
105210. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105211. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
105212. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
105213. Iron reacts with oxygen in air to form iron(III) oxide.
105214. Hydrogen reacts with oxygen to form water.
105215. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
105216. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
105217. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
105218. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
105219. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
105220. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
105221. Carbon combines with oxygen to form carbon dioxide.
105222. Butane burns in air to form carbon dioxide and water vapor and release heat.
105223. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
105224. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105225. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
105226. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
105227. Copper reacts with oxygen in air to form copper(II) oxide.
105228. Nitrogen reacts with oxygen to form nitrogen oxides.
105229. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
105230. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
105231. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
105232. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
105233. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
105234. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
105235. Phosphorus combines with oxygen to form phosphorus pentoxide.
105236. Carbon Monoxide burns in air to form carbon dioxide and release heat.
105237. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
105238. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105239. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
105240. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
105241. Lead reacts with oxygen in air to form lead(II) oxide.
105242. Silicon reacts with oxygen to form silicon dioxide.
105243. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
105244. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
105245. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
105246. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
105247. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
105248. On heating, hydrogen peroxide decomposes to form water and oxygen.
105249. Magnesium combines with oxygen to form magnesium oxide.
105250. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
105251. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
105252. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105253. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
105254. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
105255. Magnesium reacts with oxygen in air to form magnesium oxide.
105256. Carbon reacts with oxygen to form carbon dioxide.
105257. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
105258. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
105259. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
105260. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
105261. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
105262. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
105263. Iron combines with sulfur to form iron sulfide.
105264. Hydrogen burns in air to form water vapor and release heat.
105265. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
105266. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105267. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
105268. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
105269. Calcium reacts with oxygen in air to form calcium oxide.
105270. Sulfur reacts with oxygen to form sulfur dioxide.
105271. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
105272. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
105273. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
105274. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
105275. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
105276. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
105277. Calcium Oxide combines with water to form calcium hydroxide.
105278. Methane burns in air to form carbon dioxide and water vapor and release heat.
105279. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
105280. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105281. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
105282. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

105283. Aluminium reacts with oxygen in air to form aluminium oxide.
105284. Phosphorus reacts with oxygen to form phosphorus pentoxide.
105285. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
105286. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
105287. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
105288. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
105289. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
105290. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
105291. Hydrogen combines with oxygen to form water.
105292. Ethane burns in air to form carbon dioxide and water vapor and release heat.
105293. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
105294. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105295. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
105296. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
105297. Zinc reacts with oxygen in air to form zinc oxide.
105298. Hydrogen reacts with oxygen to form water.
105299. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
105300. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
105301. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
105302. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
105303. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
105304. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
105305. Nitrogen combines with hydrogen to form ammonia.
105306. Propane burns in air to form carbon dioxide and water vapor and release heat.
105307. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
105308. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105309. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
105310. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
105311. Iron reacts with oxygen in air to form iron(III) oxide.
105312. Nitrogen reacts with oxygen to form nitrogen oxides.
105313. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
105314. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
105315. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
105316. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
105317. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
105318. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
105319. Sulfur combines with oxygen to form sulfur dioxide.
105320. Butane burns in air to form carbon dioxide and water vapor and release heat.
105321. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
105322. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105323. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
105324. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
105325. Copper reacts with oxygen in air to form copper(II) oxide.
105326. Silicon reacts with oxygen to form silicon dioxide.
105327. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
105328. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
105329. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
105330. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
105331. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
105332. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
105333. Carbon combines with oxygen to form carbon dioxide.
105334. Carbon Monoxide burns in air to form carbon dioxide and release heat.
105335. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
105336. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105337. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
105338. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
105339. Lead reacts with oxygen in air to form lead(II) oxide.
105340. Carbon reacts with oxygen to form carbon dioxide.
105341. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
105342. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
105343. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
105344. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
105345. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
105346. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
105347. Phosphorus combines with oxygen to form phosphorus pentoxide.
105348. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
105349. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
105350. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105351. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
105352. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
105353. Magnesium reacts with oxygen in air to form magnesium oxide.
105354. Sulfur reacts with oxygen to form sulfur dioxide.
105355. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
105356. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
105357. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
105358. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
105359. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
105360. On heating, hydrogen peroxide decomposes to form water and oxygen.
105361. Magnesium combines with oxygen to form magnesium oxide.
105362. Hydrogen burns in air to form water vapor and release heat.
105363. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
105364. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105365. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
105366. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
105367. Calcium reacts with oxygen in air to form calcium oxide.
105368. Phosphorus reacts with oxygen to form phosphorus pentoxide.
105369. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
105370. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
105371. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
105372. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
105373. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
105374. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

105375. Iron combines with sulfur to form iron sulfide.
105376. Methane burns in air to form carbon dioxide and water vapor and release heat.
105377. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
105378. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105379. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
105380. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
105381. Aluminium reacts with oxygen in air to form aluminium oxide.
105382. Hydrogen reacts with oxygen to form water.
105383. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
105384. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
105385. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
105386. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
105387. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
105388. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
105389. Calcium Oxide combines with water to form calcium hydroxide.
105390. Ethane burns in air to form carbon dioxide and water vapor and release heat.
105391. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
105392. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105393. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
105394. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
105395. Zinc reacts with oxygen in air to form zinc oxide.
105396. Nitrogen reacts with oxygen to form nitrogen oxides.
105397. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
105398. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
105399. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
105400. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
105401. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
105402. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
105403. Hydrogen combines with oxygen to form water.
105404. Propane burns in air to form carbon dioxide and water vapor and release heat.
105405. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
105406. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105407. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
105408. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
105409. Iron reacts with oxygen in air to form iron(III) oxide.
105410. Silicon reacts with oxygen to form silicon dioxide.
105411. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
105412. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
105413. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
105414. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
105415. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
105416. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
105417. Nitrogen combines with hydrogen to form ammonia.
105418. Butane burns in air to form carbon dioxide and water vapor and release heat.
105419. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
105420. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105421. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
105422. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
105423. Copper reacts with oxygen in air to form copper(II) oxide.
105424. Carbon reacts with oxygen to form carbon dioxide.
105425. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
105426. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
105427. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
105428. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
105429. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
105430. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
105431. Sulfur combines with oxygen to form sulfur dioxide.
105432. Carbon Monoxide burns in air to form carbon dioxide and release heat.
105433. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
105434. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105435. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
105436. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
105437. Lead reacts with oxygen in air to form lead(II) oxide.
105438. Sulfur reacts with oxygen to form sulfur dioxide.
105439. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
105440. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
105441. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
105442. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
105443. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
105444. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
105445. Carbon combines with oxygen to form carbon dioxide.
105446. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
105447. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
105448. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105449. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
105450. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
105451. Magnesium reacts with oxygen in air to form magnesium oxide.
105452. Phosphorus reacts with oxygen to form phosphorus pentoxide.
105453. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
105454. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
105455. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
105456. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
105457. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
105458. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
105459. Phosphorus combines with oxygen to form phosphorus pentoxide.
105460. Hydrogen burns in air to form water vapor and release heat.
105461. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
105462. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105463. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
105464. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
105465. Calcium reacts with oxygen in air to form calcium oxide.
105466. Hydrogen reacts with oxygen to form water.

105467. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
105468. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
105469. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
105470. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
105471. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
105472. On heating, hydrogen peroxide decomposes to form water and oxygen.
105473. Magnesium combines with oxygen to form magnesium oxide.
105474. Methane burns in air to form carbon dioxide and water vapor and release heat.
105475. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
105476. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105477. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
105478. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
105479. Aluminium reacts with oxygen in air to form aluminium oxide.
105480. Nitrogen reacts with oxygen to form nitrogen oxides.
105481. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
105482. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
105483. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
105484. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
105485. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
105486. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
105487. Iron combines with sulfur to form iron sulfide.
105488. Ethane burns in air to form carbon dioxide and water vapor and release heat.
105489. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
105490. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105491. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
105492. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
105493. Zinc reacts with oxygen in air to form zinc oxide.
105494. Silicon reacts with oxygen to form silicon dioxide.
105495. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
105496. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
105497. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
105498. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
105499. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
105500. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
105501. Calcium Oxide combines with water to form calcium hydroxide.
105502. Propane burns in air to form carbon dioxide and water vapor and release heat.
105503. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
105504. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105505. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
105506. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
105507. Iron reacts with oxygen in air to form iron(III) oxide.
105508. Carbon reacts with oxygen to form carbon dioxide.
105509. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
105510. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
105511. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
105512. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
105513. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
105514. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
105515. Hydrogen combines with oxygen to form water.
105516. Butane burns in air to form carbon dioxide and water vapor and release heat.
105517. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
105518. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105519. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
105520. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
105521. Copper reacts with oxygen in air to form copper(II) oxide.
105522. Sulfur reacts with oxygen to form sulfur dioxide.
105523. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
105524. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
105525. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
105526. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
105527. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
105528. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
105529. Nitrogen combines with hydrogen to form ammonia.
105530. Carbon Monoxide burns in air to form carbon dioxide and release heat.
105531. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
105532. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105533. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
105534. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
105535. Lead reacts with oxygen in air to form lead(II) oxide.
105536. Phosphorus reacts with oxygen to form phosphorus pentoxide.
105537. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
105538. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
105539. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
105540. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
105541. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
105542. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
105543. Sulfur combines with oxygen to form sulfur dioxide.
105544. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
105545. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
105546. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105547. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
105548. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
105549. Magnesium reacts with oxygen in air to form magnesium oxide.
105550. Hydrogen reacts with oxygen to form water.
105551. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
105552. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
105553. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
105554. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
105555. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
105556. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
105557. Carbon combines with oxygen to form carbon dioxide.
105558. Hydrogen burns in air to form water vapor and release heat.

105559. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

105560. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105561. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.

105562. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

105563. Calcium reacts with oxygen in air to form calcium oxide.

105564. Nitrogen reacts with oxygen to form nitrogen oxides.

105565. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

105566. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

105567. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

105568. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

105569. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

105570. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

105571. Phosphorus combines with oxygen to form phosphorus pentoxide.

105572. Methane burns in air to form carbon dioxide and water vapor and release heat.

105573. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

105574. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105575. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.

105576. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

105577. Aluminium reacts with oxygen in air to form aluminium oxide.

105578. Silicon reacts with oxygen to form silicon dioxide.

105579. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

105580. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

105581. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

105582. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

105583. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

105584. On heating, hydrogen peroxide decomposes to form water and oxygen.

105585. Magnesium combines with oxygen to form magnesium oxide.

105586. Ethane burns in air to form carbon dioxide and water vapor and release heat.

105587. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

105588. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105589. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.

105590. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

105591. Zinc reacts with oxygen in air to form zinc oxide.

105592. Carbon reacts with oxygen to form carbon dioxide.

105593. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

105594. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

105595. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

105596. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

105597. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

105598. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

105599. Iron combines with sulfur to form iron sulfide.

105600. Propane burns in air to form carbon dioxide and water vapor and release heat.

105601. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

105602. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105603. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.

105604. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

105605. Iron reacts with oxygen in air to form iron(III) oxide.

105606. Sulfur reacts with oxygen to form sulfur dioxide.

105607. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

105608. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

105609. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

105610. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

105611. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

105612. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

105613. Calcium Oxide combines with water to form calcium hydroxide.

105614. Butane burns in air to form carbon dioxide and water vapor and release heat.

105615. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

105616. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105617. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

105618. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

105619. Copper reacts with oxygen in air to form copper(II) oxide.

105620. Phosphorus reacts with oxygen to form phosphorus pentoxide.

105621. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

105622. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

105623. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

105624. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

105625. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

105626. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

105627. Hydrogen combines with oxygen to form water.

105628. Carbon Monoxide burns in air to form carbon dioxide and release heat.

105629. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

105630. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105631. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

105632. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

105633. Lead reacts with oxygen in air to form lead(II) oxide.

105634. Hydrogen reacts with oxygen to form water.

105635. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

105636. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

105637. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

105638. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

105639. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

105640. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

105641. Nitrogen combines with hydrogen to form ammonia.

105642. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

105643. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

105644. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105645. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

105646. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

105647. Magnesium reacts with oxygen in air to form magnesium oxide.

105648. Nitrogen reacts with oxygen to form nitrogen oxides.

105649. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

105650. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
105651. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
105652. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
105653. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
105654. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
105655. Sulfur combines with oxygen to form sulfur dioxide.
105656. Hydrogen burns in air to form water vapor and release heat.
105657. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
105658. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105659. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
105660. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
105661. Calcium reacts with oxygen in air to form calcium oxide.
105662. Silicon reacts with oxygen to form silicon dioxide.
105663. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
105664. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
105665. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
105666. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
105667. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
105668. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
105669. Carbon combines with oxygen to form carbon dioxide.
105670. Methane burns in air to form carbon dioxide and water vapor and release heat.
105671. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
105672. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105673. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
105674. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
105675. Aluminium reacts with oxygen in air to form aluminium oxide.
105676. Carbon reacts with oxygen to form carbon dioxide.
105677. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
105678. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
105679. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
105680. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
105681. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
105682. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
105683. Phosphorus combines with oxygen to form phosphorus pentoxide.
105684. Ethane burns in air to form carbon dioxide and water vapor and release heat.
105685. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
105686. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105687. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
105688. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
105689. Zinc reacts with oxygen in air to form zinc oxide.
105690. Sulfur reacts with oxygen to form sulfur dioxide.
105691. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
105692. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
105693. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
105694. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
105695. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
105696. On heating, hydrogen peroxide decomposes to form water and oxygen.
105697. Magnesium combines with oxygen to form magnesium oxide.
105698. Propane burns in air to form carbon dioxide and water vapor and release heat.
105699. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
105700. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105701. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
105702. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
105703. Iron reacts with oxygen in air to form iron(III) oxide.
105704. Phosphorus reacts with oxygen to form phosphorus pentoxide.
105705. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
105706. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
105707. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
105708. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
105709. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
105710. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
105711. Iron combines with sulfur to form iron sulfide.
105712. Butane burns in air to form carbon dioxide and water vapor and release heat.
105713. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
105714. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105715. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
105716. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
105717. Copper reacts with oxygen in air to form copper(II) oxide.
105718. Hydrogen reacts with oxygen to form water.
105719. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
105720. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
105721. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
105722. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
105723. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
105724. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
105725. Calcium Oxide combines with water to form calcium hydroxide.
105726. Carbon Monoxide burns in air to form carbon dioxide and release heat.
105727. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
105728. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105729. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
105730. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
105731. Lead reacts with oxygen in air to form lead(II) oxide.
105732. Nitrogen reacts with oxygen to form nitrogen oxides.
105733. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
105734. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
105735. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
105736. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
105737. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
105738. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
105739. Hydrogen combines with oxygen to form water.
105740. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

105741. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

105742. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105743. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

105744. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

105745. Magnesium reacts with oxygen in air to form magnesium oxide.

105746. Silicon reacts with oxygen to form silicon dioxide.

105747. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

105748. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

105749. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

105750. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

105751. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

105752. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

105753. Nitrogen combines with hydrogen to form ammonia.

105754. Hydrogen burns in air to form water vapor and release heat.

105755. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

105756. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105757. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

105758. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

105759. Calcium reacts with oxygen in air to form calcium oxide.

105760. Carbon reacts with oxygen to form carbon dioxide.

105761. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

105762. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

105763. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

105764. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

105765. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

105766. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

105767. Sulfur combines with oxygen to form sulfur dioxide.

105768. Methane burns in air to form carbon dioxide and water vapor and release heat.

105769. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

105770. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105771. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

105772. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

105773. Aluminium reacts with oxygen in air to form aluminium oxide.

105774. Sulfur reacts with oxygen to form sulfur dioxide.

105775. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

105776. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

105777. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

105778. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

105779. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

105780. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

105781. Carbon combines with oxygen to form carbon dioxide.

105782. Ethane burns in air to form carbon dioxide and water vapor and release heat.

105783. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

105784. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105785. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

105786. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

105787. Zinc reacts with oxygen in air to form zinc oxide.

105788. Phosphorus reacts with oxygen to form phosphorus pentoxide.

105789. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

105790. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

105791. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

105792. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

105793. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

105794. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

105795. Phosphorus combines with oxygen to form phosphorus pentoxide.

105796. Propane burns in air to form carbon dioxide and water vapor and release heat.

105797. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

105798. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105799. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

105800. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

105801. Iron reacts with oxygen in air to form iron(III) oxide.

105802. Hydrogen reacts with oxygen to form water.

105803. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

105804. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

105805. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

105806. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

105807. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

105808. On heating, hydrogen peroxide decomposes to form water and oxygen.

105809. Magnesium combines with oxygen to form magnesium oxide.

105810. Butane burns in air to form carbon dioxide and water vapor and release heat.

105811. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

105812. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105813. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

105814. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

105815. Copper reacts with oxygen in air to form copper(II) oxide.

105816. Nitrogen reacts with oxygen to form nitrogen oxides.

105817. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

105818. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

105819. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

105820. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

105821. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

105822. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

105823. Iron combines with sulfur to form iron sulfide.

105824. Carbon Monoxide burns in air to form carbon dioxide and release heat.

105825. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

105826. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105827. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

105828. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

105829. Lead reacts with oxygen in air to form lead(II) oxide.

105830. Silicon reacts with oxygen to form silicon dioxide.

105831. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

105832. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

105833. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

105834. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
105835. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
105836. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
105837. Calcium Oxide combines with water to form calcium hydroxide.
105838. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
105839. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
105840. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105841. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
105842. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
105843. Magnesium reacts with oxygen in air to form magnesium oxide.
105844. Carbon reacts with oxygen to form carbon dioxide.
105845. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
105846. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
105847. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
105848. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
105849. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
105850. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
105851. Hydrogen combines with oxygen to form water.
105852. Hydrogen burns in air to form water vapor and release heat.
105853. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
105854. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105855. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
105856. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
105857. Calcium reacts with oxygen in air to form calcium oxide.
105858. Sulfur reacts with oxygen to form sulfur dioxide.
105859. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
105860. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
105861. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
105862. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
105863. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
105864. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
105865. Nitrogen combines with hydrogen to form ammonia.
105866. Methane burns in air to form carbon dioxide and water vapor and release heat.
105867. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
105868. Copper(I) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105869. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
105870. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
105871. Aluminium reacts with oxygen in air to form aluminium oxide.
105872. Phosphorus reacts with oxygen to form phosphorus pentoxide.
105873. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
105874. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
105875. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
105876. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
105877. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
105878. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
105879. Sulfur combines with oxygen to form sulfur dioxide.
105880. Ethane burns in air to form carbon dioxide and water vapor and release heat.
105881. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
105882. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105883. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
105884. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
105885. Zinc reacts with oxygen in air to form zinc oxide.
105886. Hydrogen reacts with oxygen to form water.
105887. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
105888. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
105889. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
105890. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
105891. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
105892. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
105893. Carbon combines with oxygen to form carbon dioxide.
105894. Propane burns in air to form carbon dioxide and water vapor and release heat.
105895. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
105896. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105897. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
105898. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
105899. Iron reacts with oxygen in air to form iron(III) oxide.
105900. Nitrogen reacts with oxygen to form nitrogen oxides.
105901. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
105902. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
105903. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
105904. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
105905. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
105906. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
105907. Phosphorus combines with oxygen to form phosphorus pentoxide.
105908. Butane burns in air to form carbon dioxide and water vapor and release heat.
105909. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
105910. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105911. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
105912. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
105913. Copper reacts with oxygen in air to form copper(II) oxide.
105914. Silicon reacts with oxygen to form silicon dioxide.
105915. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
105916. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
105917. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
105918. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
105919. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
105920. On heating, hydrogen peroxide decomposes to form water and oxygen.
105921. Magnesium combines with oxygen to form magnesium oxide.
105922. Carbon Monoxide burns in air to form carbon dioxide and release heat.
105923. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
105924. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

105925. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
105926. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
105927. Lead reacts with oxygen in air to form lead(II) oxide.
105928. Carbon reacts with oxygen to form carbon dioxide.
105929. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
105930. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
105931. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
105932. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
105933. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
105934. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
105935. Iron combines with sulfur to form iron sulfide.
105936. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
105937. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
105938. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105939. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
105940. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
105941. Magnesium reacts with oxygen in air to form magnesium oxide.
105942. Sulfur reacts with oxygen to form sulfur dioxide.
105943. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
105944. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
105945. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
105946. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
105947. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
105948. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
105949. Calcium Oxide combines with water to form calcium hydroxide.
105950. Hydrogen burns in air to form water vapor and release heat.
105951. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
105952. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105953. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
105954. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
105955. Calcium reacts with oxygen in air to form calcium oxide.
105956. Phosphorus reacts with oxygen to form phosphorus pentoxide.
105957. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
105958. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
105959. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
105960. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
105961. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
105962. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
105963. Hydrogen combines with oxygen to form water.
105964. Methane burns in air to form carbon dioxide and water vapor and release heat.
105965. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
105966. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105967. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
105968. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
105969. Aluminium reacts with oxygen in air to form aluminium oxide.
105970. Hydrogen reacts with oxygen to form water.
105971. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
105972. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
105973. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
105974. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
105975. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
105976. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
105977. Nitrogen combines with hydrogen to form ammonia.
105978. Ethane burns in air to form carbon dioxide and water vapor and release heat.
105979. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
105980. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105981. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
105982. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
105983. Zinc reacts with oxygen in air to form zinc oxide.
105984. Nitrogen reacts with oxygen to form nitrogen oxides.
105985. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
105986. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
105987. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
105988. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
105989. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
105990. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
105991. Sulfur combines with oxygen to form sulfur dioxide.
105992. Propane burns in air to form carbon dioxide and water vapor and release heat.
105993. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
105994. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
105995. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
105996. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
105997. Iron reacts with oxygen in air to form iron(III) oxide.
105998. Silicon reacts with oxygen to form silicon dioxide.
105999. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
106000. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
106001. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
106002. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
106003. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
106004. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
106005. Carbon combines with oxygen to form carbon dioxide.
106006. Butane burns in air to form carbon dioxide and water vapor and release heat.
106007. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
106008. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106009. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
106010. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
106011. Copper reacts with oxygen in air to form copper(II) oxide.
106012. Carbon reacts with oxygen to form carbon dioxide.
106013. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
106014. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
106015. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
106016. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

106017. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
106018. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
106019. Phosphorus combines with oxygen to form phosphorus pentoxide.
106020. Carbon Monoxide burns in air to form carbon dioxide and release heat.
106021. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
106022. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106023. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
106024. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
106025. Lead reacts with oxygen in air to form lead(II) oxide.
106026. Sulfur reacts with oxygen to form sulfur dioxide.
106027. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
106028. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
106029. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
106030. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
106031. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
106032. On heating, hydrogen peroxide decomposes to form water and oxygen.
106033. Magnesium combines with oxygen to form magnesium oxide.
106034. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
106035. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
106036. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106037. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
106038. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
106039. Magnesium reacts with oxygen in air to form magnesium oxide.
106040. Phosphorus reacts with oxygen to form phosphorus pentoxide.
106041. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
106042. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
106043. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
106044. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
106045. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
106046. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
106047. Iron combines with sulfur to form iron sulfide.
106048. Hydrogen burns in air to form water vapor and release heat.
106049. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
106050. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106051. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
106052. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
106053. Calcium reacts with oxygen in air to form calcium oxide.
106054. Hydrogen reacts with oxygen to form water.
106055. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
106056. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
106057. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
106058. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
106059. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
106060. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
106061. Calcium Oxide combines with water to form calcium hydroxide.
106062. Methane burns in air to form carbon dioxide and water vapor and release heat.
106063. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
106064. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106065. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
106066. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
106067. Aluminium reacts with oxygen in air to form aluminium oxide.
106068. Nitrogen reacts with oxygen to form nitrogen oxides.
106069. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
106070. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
106071. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
106072. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
106073. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
106074. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
106075. Hydrogen combines with oxygen to form water.
106076. Ethane burns in air to form carbon dioxide and water vapor and release heat.
106077. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
106078. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106079. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
106080. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
106081. Zinc reacts with oxygen in air to form zinc oxide.
106082. Silicon reacts with oxygen to form silicon dioxide.
106083. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
106084. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
106085. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
106086. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
106087. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
106088. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
106089. Nitrogen combines with hydrogen to form ammonia.
106090. Propane burns in air to form carbon dioxide and water vapor and release heat.
106091. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
106092. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106093. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
106094. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
106095. Iron reacts with oxygen in air to form iron(III) oxide.
106096. Carbon reacts with oxygen to form carbon dioxide.
106097. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
106098. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
106099. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
106100. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
106101. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
106102. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
106103. Sulfur combines with oxygen to form sulfur dioxide.
106104. Butane burns in air to form carbon dioxide and water vapor and release heat.
106105. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
106106. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106107. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

106108. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
106109. Copper reacts with oxygen in air to form copper(II) oxide.
106110. Sulfur reacts with oxygen to form sulfur dioxide.
106111. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
106112. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
106113. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
106114. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
106115. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
106116. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
106117. Carbon combines with oxygen to form carbon dioxide.
106118. Carbon Monoxide burns in air to form carbon dioxide and release heat.
106119. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
106120. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106121. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
106122. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
106123. Lead reacts with oxygen in air to form lead(II) oxide.
106124. Phosphorus reacts with oxygen to form phosphorus pentoxide.
106125. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
106126. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
106127. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
106128. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
106129. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
106130. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
106131. Phosphorus combines with oxygen to form phosphorus pentoxide.
106132. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
106133. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
106134. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106135. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
106136. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
106137. Magnesium reacts with oxygen in air to form magnesium oxide.
106138. Hydrogen reacts with oxygen to form water.
106139. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
106140. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
106141. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
106142. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
106143. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
106144. On heating, hydrogen peroxide decomposes to form water and oxygen.
106145. Magnesium combines with oxygen to form magnesium oxide.
106146. Hydrogen burns in air to form water vapor and release heat.
106147. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
106148. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106149. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
106150. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
106151. Calcium reacts with oxygen in air to form calcium oxide.
106152. Nitrogen reacts with oxygen to form nitrogen oxides.
106153. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
106154. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
106155. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
106156. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
106157. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
106158. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
106159. Iron combines with sulfur to form iron sulfide.
106160. Methane burns in air to form carbon dioxide and water vapor and release heat.
106161. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
106162. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106163. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
106164. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
106165. Aluminium reacts with oxygen in air to form aluminium oxide.
106166. Silicon reacts with oxygen to form silicon dioxide.
106167. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
106168. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
106169. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
106170. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
106171. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
106172. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
106173. Calcium Oxide combines with water to form calcium hydroxide.
106174. Ethane burns in air to form carbon dioxide and water vapor and release heat.
106175. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
106176. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106177. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
106178. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
106179. Zinc reacts with oxygen in air to form zinc oxide.
106180. Carbon reacts with oxygen to form carbon dioxide.
106181. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
106182. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
106183. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
106184. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
106185. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
106186. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
106187. Hydrogen combines with oxygen to form water.
106188. Propane burns in air to form carbon dioxide and water vapor and release heat.
106189. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
106190. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106191. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
106192. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
106193. Iron reacts with oxygen in air to form iron(III) oxide.
106194. Sulfur reacts with oxygen to form sulfur dioxide.
106195. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
106196. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
106197. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
106198. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
106199. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

106200. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

106201. Nitrogen combines with hydrogen to form ammonia.

106202. Butane burns in air to form carbon dioxide and water vapor and release heat.

106203. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

106204. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106205. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.

106206. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

106207. Copper reacts with oxygen in air to form copper(II) oxide.

106208. Phosphorus reacts with oxygen to form phosphorus pentoxide.

106209. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

106210. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

106211. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

106212. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

106213. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

106214. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

106215. Sulfur combines with oxygen to form sulfur dioxide.

106216. Carbon Monoxide burns in air to form carbon dioxide and release heat.

106217. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

106218. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106219. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.

106220. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

106221. Lead reacts with oxygen in air to form lead(II) oxide.

106222. Hydrogen reacts with oxygen to form water.

106223. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

106224. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

106225. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

106226. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

106227. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

106228. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

106229. Carbon combines with oxygen to form carbon dioxide.

106230. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

106231. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

106232. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106233. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.

106234. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

106235. Magnesium reacts with oxygen in air to form magnesium oxide.

106236. Nitrogen reacts with oxygen to form nitrogen oxides.

106237. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

106238. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

106239. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

106240. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

106241. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

106242. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

106243. Phosphorus combines with oxygen to form phosphorus pentoxide.

106244. Hydrogen burns in air to form water vapor and release heat.

106245. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

106246. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106247. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.

106248. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

106249. Calcium reacts with oxygen in air to form calcium oxide.

106250. Silicon reacts with oxygen to form silicon dioxide.

106251. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

106252. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

106253. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

106254. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

106255. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

106256. On heating, hydrogen peroxide decomposes to form water and oxygen.

106257. Magnesium combines with oxygen to form magnesium oxide.

106258. Methane burns in air to form carbon dioxide and water vapor and release heat.

106259. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

106260. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106261. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.

106262. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

106263. Aluminium reacts with oxygen in air to form aluminium oxide.

106264. Carbon reacts with oxygen to form carbon dioxide.

106265. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

106266. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

106267. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

106268. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

106269. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

106270. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

106271. Iron combines with sulfur to form iron sulfide.

106272. Ethane burns in air to form carbon dioxide and water vapor and release heat.

106273. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

106274. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106275. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.

106276. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

106277. Zinc reacts with oxygen in air to form zinc oxide.

106278. Sulfur reacts with oxygen to form sulfur dioxide.

106279. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

106280. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

106281. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

106282. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

106283. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

106284. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

106285. Calcium Oxide combines with water to form calcium hydroxide.

106286. Propane burns in air to form carbon dioxide and water vapor and release heat.

106287. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.

106288. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106289. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

106290. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

106291. Iron reacts with oxygen in air to form iron(III) oxide.

106292. Phosphorus reacts with oxygen to form phosphorus pentoxide.
106293. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
106294. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
106295. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
106296. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
106297. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
106298. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
106299. Hydrogen combines with oxygen to form water.
106300. Butane burns in air to form carbon dioxide and water vapor and release heat.
106301. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
106302. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106303. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
106304. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
106305. Copper reacts with oxygen in air to form copper(II) oxide.
106306. Hydrogen reacts with oxygen to form water.
106307. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
106308. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
106309. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
106310. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
106311. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
106312. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
106313. Nitrogen combines with hydrogen to form ammonia.
106314. Carbon Monoxide burns in air to form carbon dioxide and release heat.
106315. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
106316. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106317. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
106318. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
106319. Lead reacts with oxygen in air to form lead(II) oxide.
106320. Nitrogen reacts with oxygen to form nitrogen oxides.
106321. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
106322. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
106323. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
106324. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
106325. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
106326. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
106327. Sulfur combines with oxygen to form sulfur dioxide.
106328. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
106329. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
106330. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106331. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
106332. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
106333. Magnesium reacts with oxygen in air to form magnesium oxide.
106334. Silicon reacts with oxygen to form silicon dioxide.
106335. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
106336. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
106337. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
106338. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
106339. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
106340. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
106341. Carbon combines with oxygen to form carbon dioxide.
106342. Hydrogen burns in air to form water vapor and release heat.
106343. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
106344. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106345. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
106346. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
106347. Calcium reacts with oxygen in air to form calcium oxide.
106348. Carbon reacts with oxygen to form carbon dioxide.
106349. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
106350. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
106351. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
106352. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
106353. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
106354. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
106355. Phosphorus combines with oxygen to form phosphorus pentoxide.
106356. Methane burns in air to form carbon dioxide and water vapor and release heat.
106357. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
106358. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106359. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
106360. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
106361. Aluminium reacts with oxygen in air to form aluminium oxide.
106362. Sulfur reacts with oxygen to form sulfur dioxide.
106363. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
106364. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
106365. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
106366. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
106367. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
106368. On heating, hydrogen peroxide decomposes to form water and oxygen.
106369. Magnesium combines with oxygen to form magnesium oxide.
106370. Ethane burns in air to form carbon dioxide and water vapor and release heat.
106371. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
106372. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106373. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
106374. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
106375. Zinc reacts with oxygen in air to form zinc oxide.
106376. Phosphorus reacts with oxygen to form phosphorus pentoxide.
106377. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
106378. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
106379. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
106380. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
106381. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
106382. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

106383. Iron combines with sulfur to form iron sulfide.
106384. Propane burns in air to form carbon dioxide and water vapor and release heat.
106385. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
106386. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106387. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
106388. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
106389. Iron reacts with oxygen in air to form iron(III) oxide.
106390. Hydrogen reacts with oxygen to form water.
106391. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
106392. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
106393. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
106394. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
106395. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
106396. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
106397. Calcium Oxide combines with water to form calcium hydroxide.
106398. Butane burns in air to form carbon dioxide and water vapor and release heat.
106399. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
106400. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106401. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
106402. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
106403. Copper reacts with oxygen in air to form copper(II) oxide.
106404. Nitrogen reacts with oxygen to form nitrogen oxides.
106405. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
106406. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
106407. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
106408. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
106409. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
106410. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
106411. Hydrogen combines with oxygen to form water.
106412. Carbon Monoxide burns in air to form carbon dioxide and release heat.
106413. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
106414. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106415. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
106416. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
106417. Lead reacts with oxygen in air to form lead(II) oxide.
106418. Silicon reacts with oxygen to form silicon dioxide.
106419. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
106420. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
106421. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
106422. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
106423. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
106424. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
106425. Nitrogen combines with hydrogen to form ammonia.
106426. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
106427. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
106428. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106429. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
106430. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
106431. Magnesium reacts with oxygen in air to form magnesium oxide.
106432. Carbon reacts with oxygen to form carbon dioxide.
106433. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
106434. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
106435. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
106436. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
106437. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
106438. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
106439. Sulfur combines with oxygen to form sulfur dioxide.
106440. Hydrogen burns in air to form water vapor and release heat.
106441. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
106442. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106443. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
106444. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
106445. Calcium reacts with oxygen in air to form calcium oxide.
106446. Sulfur reacts with oxygen to form sulfur dioxide.
106447. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
106448. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
106449. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
106450. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
106451. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
106452. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
106453. Carbon combines with oxygen to form carbon dioxide.
106454. Methane burns in air to form carbon dioxide and water vapor and release heat.
106455. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
106456. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106457. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
106458. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
106459. Aluminium reacts with oxygen in air to form aluminium oxide.
106460. Phosphorus reacts with oxygen to form phosphorus pentoxide.
106461. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
106462. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
106463. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
106464. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
106465. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
106466. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
106467. Phosphorus combines with oxygen to form phosphorus pentoxide.
106468. Ethane burns in air to form carbon dioxide and water vapor and release heat.
106469. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
106470. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106471. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
106472. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
106473. Zinc reacts with oxygen in air to form zinc oxide.
106474. Hydrogen reacts with oxygen to form water.

106475. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
106476. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
106477. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
106478. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
106479. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
106480. On heating, hydrogen peroxide decomposes to form water and oxygen.
106481. Magnesium combines with oxygen to form magnesium oxide.
106482. Propane burns in air to form carbon dioxide and water vapor and release heat.
106483. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
106484. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106485. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
106486. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
106487. Iron reacts with oxygen in air to form iron(III) oxide.
106488. Nitrogen reacts with oxygen to form nitrogen oxides.
106489. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
106490. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
106491. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
106492. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
106493. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
106494. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
106495. Iron combines with sulfur to form iron sulfide.
106496. Butane burns in air to form carbon dioxide and water vapor and release heat.
106497. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
106498. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106499. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
106500. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
106501. Copper reacts with oxygen in air to form copper(II) oxide.
106502. Silicon reacts with oxygen to form silicon dioxide.
106503. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
106504. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
106505. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
106506. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
106507. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
106508. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
106509. Calcium Oxide combines with water to form calcium hydroxide.
106510. Carbon Monoxide burns in air to form carbon dioxide and release heat.
106511. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
106512. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106513. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
106514. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
106515. Lead reacts with oxygen in air to form lead(II) oxide.
106516. Carbon reacts with oxygen to form carbon dioxide.
106517. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
106518. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
106519. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
106520. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
106521. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
106522. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
106523. Hydrogen combines with oxygen to form water.
106524. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
106525. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
106526. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106527. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
106528. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
106529. Magnesium reacts with oxygen in air to form magnesium oxide.
106530. Sulfur reacts with oxygen to form sulfur dioxide.
106531. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
106532. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
106533. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
106534. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
106535. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
106536. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
106537. Nitrogen combines with hydrogen to form ammonia.
106538. Hydrogen burns in air to form water vapor and release heat.
106539. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
106540. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106541. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
106542. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
106543. Calcium reacts with oxygen in air to form calcium oxide.
106544. Phosphorus reacts with oxygen to form phosphorus pentoxide.
106545. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
106546. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
106547. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
106548. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
106549. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
106550. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
106551. Sulfur combines with oxygen to form sulfur dioxide.
106552. Methane burns in air to form carbon dioxide and water vapor and release heat.
106553. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
106554. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106555. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
106556. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
106557. Aluminium reacts with oxygen in air to form aluminium oxide.
106558. Hydrogen reacts with oxygen to form water.
106559. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
106560. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
106561. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
106562. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
106563. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
106564. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
106565. Carbon combines with oxygen to form carbon dioxide.
106566. Ethane burns in air to form carbon dioxide and water vapor and release heat.

106567. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

106568. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106569. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.

106570. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

106571. Zinc reacts with oxygen in air to form zinc oxide.

106572. Nitrogen reacts with oxygen to form nitrogen oxides.

106573. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

106574. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

106575. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

106576. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

106577. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

106578. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

106579. Phosphorus combines with oxygen to form phosphorus pentoxide.

106580. Propane burns in air to form carbon dioxide and water vapor and release heat.

106581. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

106582. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106583. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.

106584. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

106585. Iron reacts with oxygen in air to form iron(III) oxide.

106586. Silicon reacts with oxygen to form silicon dioxide.

106587. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

106588. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

106589. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

106590. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

106591. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

106592. On heating, hydrogen peroxide decomposes to form water and oxygen.

106593. Magnesium combines with oxygen to form magnesium oxide.

106594. Butane burns in air to form carbon dioxide and water vapor and release heat.

106595. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

106596. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106597. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.

106598. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

106599. Copper reacts with oxygen in air to form copper(II) oxide.

106600. Carbon reacts with oxygen to form carbon dioxide.

106601. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

106602. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

106603. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

106604. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

106605. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

106606. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

106607. Iron combines with sulfur to form iron sulfide.

106608. Carbon Monoxide burns in air to form carbon dioxide and release heat.

106609. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

106610. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106611. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.

106612. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

106613. Lead reacts with oxygen in air to form lead(II) oxide.

106614. Sulfur reacts with oxygen to form sulfur dioxide.

106615. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

106616. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

106617. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

106618. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

106619. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

106620. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

106621. Calcium Oxide combines with water to form calcium hydroxide.

106622. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

106623. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

106624. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106625. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

106626. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

106627. Magnesium reacts with oxygen in air to form magnesium oxide.

106628. Phosphorus reacts with oxygen to form phosphorus pentoxide.

106629. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

106630. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

106631. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

106632. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

106633. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

106634. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

106635. Hydrogen combines with oxygen to form water.

106636. Hydrogen burns in air to form water vapor and release heat.

106637. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

106638. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106639. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

106640. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

106641. Calcium reacts with oxygen in air to form calcium oxide.

106642. Hydrogen reacts with oxygen to form water.

106643. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

106644. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

106645. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

106646. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

106647. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

106648. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

106649. Nitrogen combines with hydrogen to form ammonia.

106650. Methane burns in air to form carbon dioxide and water vapor and release heat.

106651. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

106652. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106653. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

106654. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

106655. Aluminium reacts with oxygen in air to form aluminium oxide.

106656. Nitrogen reacts with oxygen to form nitrogen oxides.

106657. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

106658. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

106659. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

106660. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

106661. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

106662. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

106663. Sulfur combines with oxygen to form sulfur dioxide.

106664. Ethane burns in air to form carbon dioxide and water vapor and release heat.

106665. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

106666. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106667. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.

106668. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

106669. Zinc reacts with oxygen in air to form zinc oxide.

106670. Silicon reacts with oxygen to form silicon dioxide.

106671. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

106672. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

106673. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

106674. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

106675. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

106676. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

106677. Carbon combines with oxygen to form carbon dioxide.

106678. Propane burns in air to form carbon dioxide and water vapor and release heat.

106679. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

106680. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106681. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.

106682. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

106683. Iron reacts with oxygen in air to form iron(III) oxide.

106684. Carbon reacts with oxygen to form carbon dioxide.

106685. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

106686. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

106687. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

106688. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

106689. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

106690. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

106691. Phosphorus combines with oxygen to form phosphorus pentoxide.

106692. Butane burns in air to form carbon dioxide and water vapor and release heat.

106693. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

106694. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106695. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

106696. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

106697. Copper reacts with oxygen in air to form copper(II) oxide.

106698. Sulfur reacts with oxygen to form sulfur dioxide.

106699. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

106700. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

106701. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

106702. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

106703. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

106704. On heating, hydrogen peroxide decomposes to form water and oxygen.

106705. Magnesium combines with oxygen to form magnesium oxide.

106706. Carbon Monoxide burns in air to form carbon dioxide and release heat.

106707. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

106708. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106709. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

106710. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

106711. Lead reacts with oxygen in air to form lead(II) oxide.

106712. Phosphorus reacts with oxygen to form phosphorus pentoxide.

106713. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

106714. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

106715. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

106716. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

106717. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

106718. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

106719. Iron combines with sulfur to form iron sulfide.

106720. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

106721. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

106722. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106723. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

106724. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

106725. Magnesium reacts with oxygen in air to form magnesium oxide.

106726. Hydrogen reacts with oxygen to form water.

106727. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

106728. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

106729. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

106730. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

106731. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

106732. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

106733. Calcium Oxide combines with water to form calcium hydroxide.

106734. Hydrogen burns in air to form water vapor and release heat.

106735. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

106736. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106737. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

106738. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

106739. Calcium reacts with oxygen in air to form calcium oxide.

106740. Nitrogen reacts with oxygen to form nitrogen oxides.

106741. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

106742. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

106743. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

106744. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

106745. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

106746. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

106747. Hydrogen combines with oxygen to form water.

106748. Methane burns in air to form carbon dioxide and water vapor and release heat.

106749. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

106750. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106751. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
106752. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
106753. Aluminium reacts with oxygen in air to form aluminium oxide.
106754. Silicon reacts with oxygen to form silicon dioxide.
106755. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
106756. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
106757. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
106758. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
106759. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
106760. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
106761. Nitrogen combines with hydrogen to form ammonia.
106762. Ethane burns in air to form carbon dioxide and water vapor and release heat.
106763. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
106764. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106765. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
106766. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
106767. Zinc reacts with oxygen in air to form zinc oxide.
106768. Carbon reacts with oxygen to form carbon dioxide.
106769. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
106770. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
106771. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
106772. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
106773. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
106774. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
106775. Sulfur combines with oxygen to form sulfur dioxide.
106776. Propane burns in air to form carbon dioxide and water vapor and release heat.
106777. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
106778. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106779. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
106780. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
106781. Iron reacts with oxygen in air to form iron(III) oxide.
106782. Sulfur reacts with oxygen to form sulfur dioxide.
106783. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
106784. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
106785. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
106786. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
106787. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
106788. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
106789. Carbon combines with oxygen to form carbon dioxide.
106790. Butane burns in air to form carbon dioxide and water vapor and release heat.
106791. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
106792. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106793. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
106794. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
106795. Copper reacts with oxygen in air to form copper(II) oxide.
106796. Phosphorus reacts with oxygen to form phosphorus pentoxide.
106797. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
106798. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
106799. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
106800. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
106801. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
106802. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
106803. Phosphorus combines with oxygen to form phosphorus pentoxide.
106804. Carbon Monoxide burns in air to form carbon dioxide and release heat.
106805. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
106806. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106807. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
106808. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
106809. Lead reacts with oxygen in air to form lead(II) oxide.
106810. Hydrogen reacts with oxygen to form water.
106811. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
106812. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
106813. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
106814. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
106815. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
106816. On heating, hydrogen peroxide decomposes to form water and oxygen.
106817. Magnesium combines with oxygen to form magnesium oxide.
106818. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
106819. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
106820. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106821. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
106822. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
106823. Magnesium reacts with oxygen in air to form magnesium oxide.
106824. Nitrogen reacts with oxygen to form nitrogen oxides.
106825. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
106826. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
106827. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
106828. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
106829. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
106830. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
106831. Iron combines with sulfur to form iron sulfide.
106832. Hydrogen burns in air to form water vapor and release heat.
106833. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
106834. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106835. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
106836. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
106837. Calcium reacts with oxygen in air to form calcium oxide.
106838. Silicon reacts with oxygen to form silicon dioxide.
106839. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
106840. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
106841. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
106842. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

106843. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
106844. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
106845. Calcium Oxide combines with water to form calcium hydroxide.
106846. Methane burns in air to form carbon dioxide and water vapor and release heat.
106847. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
106848. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106849. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
106850. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
106851. Aluminium reacts with oxygen in air to form aluminium oxide.
106852. Carbon reacts with oxygen to form carbon dioxide.
106853. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
106854. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
106855. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
106856. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
106857. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
106858. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
106859. Hydrogen combines with oxygen to form water.
106860. Ethane burns in air to form carbon dioxide and water vapor and release heat.
106861. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
106862. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106863. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
106864. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
106865. Zinc reacts with oxygen in air to form zinc oxide.
106866. Sulfur reacts with oxygen to form sulfur dioxide.
106867. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
106868. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
106869. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
106870. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
106871. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
106872. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
106873. Nitrogen combines with hydrogen to form ammonia.
106874. Propane burns in air to form carbon dioxide and water vapor and release heat.
106875. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
106876. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106877. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
106878. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
106879. Iron reacts with oxygen in air to form iron(III) oxide.
106880. Phosphorus reacts with oxygen to form phosphorus pentoxide.
106881. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
106882. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
106883. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
106884. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
106885. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
106886. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
106887. Sulfur combines with oxygen to form sulfur dioxide.
106888. Butane burns in air to form carbon dioxide and water vapor and release heat.
106889. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
106890. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106891. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
106892. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
106893. Copper reacts with oxygen in air to form copper(II) oxide.
106894. Hydrogen reacts with oxygen to form water.
106895. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
106896. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
106897. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
106898. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
106899. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
106900. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
106901. Carbon combines with oxygen to form carbon dioxide.
106902. Carbon Monoxide burns in air to form carbon dioxide and release heat.
106903. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
106904. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106905. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
106906. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
106907. Lead reacts with oxygen in air to form lead(II) oxide.
106908. Nitrogen reacts with oxygen to form nitrogen oxides.
106909. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
106910. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
106911. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
106912. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
106913. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
106914. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
106915. Phosphorus combines with oxygen to form phosphorus pentoxide.
106916. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
106917. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
106918. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106919. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
106920. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
106921. Magnesium reacts with oxygen in air to form magnesium oxide.
106922. Silicon reacts with oxygen to form silicon dioxide.
106923. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
106924. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
106925. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
106926. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
106927. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
106928. On heating, hydrogen peroxide decomposes to form water and oxygen.
106929. Magnesium combines with oxygen to form magnesium oxide.
106930. Hydrogen burns in air to form water vapor and release heat.
106931. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
106932. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

106933. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
106934. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
106935. Calcium reacts with oxygen in air to form calcium oxide.
106936. Carbon reacts with oxygen to form carbon dioxide.
106937. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
106938. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
106939. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
106940. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
106941. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
106942. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
106943. Iron combines with sulfur to form iron sulfide.
106944. Methane burns in air to form carbon dioxide and water vapor and release heat.
106945. Copper(I) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
106946. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106947. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
106948. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
106949. Aluminium reacts with oxygen in air to form aluminium oxide.
106950. Sulfur reacts with oxygen to form sulfur dioxide.
106951. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
106952. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
106953. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
106954. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
106955. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
106956. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
106957. Calcium Oxide combines with water to form calcium hydroxide.
106958. Ethane burns in air to form carbon dioxide and water vapor and release heat.
106959. Copper(I) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
106960. Copper(I) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106961. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
106962. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
106963. Zinc reacts with oxygen in air to form zinc oxide.
106964. Phosphorus reacts with oxygen to form phosphorus pentoxide.
106965. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
106966. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
106967. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
106968. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
106969. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
106970. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
106971. Hydrogen combines with oxygen to form water.
106972. Propane burns in air to form carbon dioxide and water vapor and release heat.
106973. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
106974. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106975. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
106976. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
106977. Iron reacts with oxygen in air to form iron(III) oxide.
106978. Hydrogen reacts with oxygen to form water.
106979. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
106980. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
106981. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
106982. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
106983. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
106984. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
106985. Nitrogen combines with hydrogen to form ammonia.
106986. Butane burns in air to form carbon dioxide and water vapor and release heat.
106987. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
106988. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
106989. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
106990. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
106991. Copper reacts with oxygen in air to form copper(II) oxide.
106992. Nitrogen reacts with oxygen to form nitrogen oxides.
106993. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
106994. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
106995. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
106996. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
106997. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
106998. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
106999. Sulfur combines with oxygen to form sulfur dioxide.
107000. Carbon Monoxide burns in air to form carbon dioxide and release heat.
107001. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
107002. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107003. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
107004. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
107005. Lead reacts with oxygen in air to form lead(II) oxide.
107006. Silicon reacts with oxygen to form silicon dioxide.
107007. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
107008. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
107009. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
107010. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
107011. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
107012. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
107013. Carbon combines with oxygen to form carbon dioxide.
107014. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
107015. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
107016. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107017. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
107018. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
107019. Magnesium reacts with oxygen in air to form magnesium oxide.
107020. Carbon reacts with oxygen to form carbon dioxide.
107021. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
107022. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
107023. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

107024. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

107025. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

107026. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

107027. Phosphorus combines with oxygen to form phosphorus pentoxide.

107028. Hydrogen burns in air to form water vapor and release heat.

107029. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

107030. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107031. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.

107032. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

107033. Calcium reacts with oxygen in air to form calcium oxide.

107034. Sulfur reacts with oxygen to form sulfur dioxide.

107035. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

107036. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

107037. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

107038. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

107039. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

107040. On heating, hydrogen peroxide decomposes to form water and oxygen.

107041. Magnesium combines with oxygen to form magnesium oxide.

107042. Methane burns in air to form carbon dioxide and water vapor and release heat.

107043. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

107044. Copper(I) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107045. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

107046. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

107047. Aluminium reacts with oxygen in air to form aluminium oxide.

107048. Phosphorus reacts with oxygen to form phosphorus pentoxide.

107049. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

107050. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

107051. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

107052. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

107053. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

107054. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

107055. Iron combines with sulfur to form iron sulfide.

107056. Ethane burns in air to form carbon dioxide and water vapor and release heat.

107057. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

107058. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107059. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

107060. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

107061. Zinc reacts with oxygen in air to form zinc oxide.

107062. Hydrogen reacts with oxygen to form water.

107063. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

107064. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

107065. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

107066. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

107067. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

107068. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

107069. Calcium Oxide combines with water to form calcium hydroxide.

107070. Propane burns in air to form carbon dioxide and water vapor and release heat.

107071. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

107072. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107073. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

107074. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

107075. Iron reacts with oxygen in air to form iron(III) oxide.

107076. Nitrogen reacts with oxygen to form nitrogen oxides.

107077. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

107078. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

107079. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

107080. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

107081. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

107082. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

107083. Hydrogen combines with oxygen to form water.

107084. Butane burns in air to form carbon dioxide and water vapor and release heat.

107085. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

107086. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107087. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

107088. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

107089. Copper reacts with oxygen in air to form copper(II) oxide.

107090. Silicon reacts with oxygen to form silicon dioxide.

107091. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

107092. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

107093. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

107094. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

107095. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

107096. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

107097. Nitrogen combines with hydrogen to form ammonia.

107098. Carbon Monoxide burns in air to form carbon dioxide and release heat.

107099. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

107100. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107101. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

107102. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

107103. Lead reacts with oxygen in air to form lead(II) oxide.

107104. Carbon reacts with oxygen to form carbon dioxide.

107105. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

107106. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

107107. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

107108. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

107109. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

107110. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

107111. Sulfur combines with oxygen to form sulfur dioxide.

107112. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

107113. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

107114. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107115. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

107116. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

107117. Magnesium reacts with oxygen in air to form magnesium oxide.

107118. Sulfur reacts with oxygen to form sulfur dioxide.

107119. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

107120. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

107121. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

107122. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

107123. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

107124. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

107125. Carbon combines with oxygen to form carbon dioxide.

107126. Hydrogen burns in air to form water vapor and release heat.

107127. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

107128. Copper(I) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107129. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

107130. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

107131. Calcium reacts with oxygen in air to form calcium oxide.

107132. Phosphorus reacts with oxygen to form phosphorus pentoxide.

107133. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

107134. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

107135. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

107136. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

107137. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

107138. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

107139. Phosphorus combines with oxygen to form phosphorus pentoxide.

107140. Methane burns in air to form carbon dioxide and water vapor and release heat.

107141. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

107142. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107143. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

107144. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

107145. Aluminium reacts with oxygen in air to form aluminium oxide.

107146. Hydrogen reacts with oxygen to form water.

107147. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

107148. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

107149. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

107150. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

107151. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

107152. On heating, hydrogen peroxide decomposes to form water and oxygen.

107153. Magnesium combines with oxygen to form magnesium oxide.

107154. Ethane burns in air to form carbon dioxide and water vapor and release heat.

107155. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

107156. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107157. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

107158. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

107159. Zinc reacts with oxygen in air to form zinc oxide.

107160. Nitrogen reacts with oxygen to form nitrogen oxides.

107161. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

107162. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

107163. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

107164. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

107165. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

107166. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

107167. Iron combines with sulfur to form iron sulfide.

107168. Propane burns in air to form carbon dioxide and water vapor and release heat.

107169. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

107170. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107171. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

107172. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

107173. Iron reacts with oxygen in air to form iron(III) oxide.

107174. Silicon reacts with oxygen to form silicon dioxide.

107175. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

107176. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

107177. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

107178. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

107179. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

107180. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

107181. Calcium Oxide combines with water to form calcium hydroxide.

107182. Butane burns in air to form carbon dioxide and water vapor and release heat.

107183. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

107184. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107185. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.

107186. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

107187. Copper reacts with oxygen in air to form copper(II) oxide.

107188. Carbon reacts with oxygen to form carbon dioxide.

107189. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

107190. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

107191. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

107192. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

107193. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

107194. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

107195. Hydrogen combines with oxygen to form water.

107196. Carbon Monoxide burns in air to form carbon dioxide and release heat.

107197. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

107198. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107199. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.

107200. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

107201. Lead reacts with oxygen in air to form lead(II) oxide.

107202. Sulfur reacts with oxygen to form sulfur dioxide.

107203. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.

107204. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

107205. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

107206. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

107207. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
107208. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
107209. Nitrogen combines with hydrogen to form ammonia.
107210. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
107211. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
107212. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107213. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
107214. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
107215. Magnesium reacts with oxygen in air to form magnesium oxide.
107216. Phosphorus reacts with oxygen to form phosphorus pentoxide.
107217. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
107218. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
107219. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
107220. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
107221. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
107222. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
107223. Sulfur combines with oxygen to form sulfur dioxide.
107224. Hydrogen burns in air to form water vapor and release heat.
107225. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
107226. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107227. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
107228. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
107229. Calcium reacts with oxygen in air to form calcium oxide.
107230. Hydrogen reacts with oxygen to form water.
107231. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
107232. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
107233. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
107234. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
107235. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
107236. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
107237. Carbon combines with oxygen to form carbon dioxide.
107238. Methane burns in air to form carbon dioxide and water vapor and release heat.
107239. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
107240. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107241. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
107242. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
107243. Aluminium reacts with oxygen in air to form aluminium oxide.
107244. Nitrogen reacts with oxygen to form nitrogen oxides.
107245. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
107246. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
107247. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
107248. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
107249. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
107250. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
107251. Phosphorus combines with oxygen to form phosphorus pentoxide.
107252. Ethane burns in air to form carbon dioxide and water vapor and release heat.
107253. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
107254. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107255. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
107256. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
107257. Zinc reacts with oxygen in air to form zinc oxide.
107258. Silicon reacts with oxygen to form silicon dioxide.
107259. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
107260. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
107261. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
107262. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
107263. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
107264. On heating, hydrogen peroxide decomposes to form water and oxygen.
107265. Magnesium combines with oxygen to form magnesium oxide.
107266. Propane burns in air to form carbon dioxide and water vapor and release heat.
107267. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
107268. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107269. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
107270. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
107271. Iron reacts with oxygen in air to form iron(III) oxide.
107272. Carbon reacts with oxygen to form carbon dioxide.
107273. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
107274. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
107275. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
107276. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
107277. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
107278. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
107279. Iron combines with sulfur to form iron sulfide.
107280. Butane burns in air to form carbon dioxide and water vapor and release heat.
107281. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
107282. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107283. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
107284. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
107285. Copper reacts with oxygen in air to form copper(II) oxide.
107286. Sulfur reacts with oxygen to form sulfur dioxide.
107287. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
107288. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
107289. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
107290. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
107291. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
107292. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
107293. Calcium Oxide combines with water to form calcium hydroxide.
107294. Carbon Monoxide burns in air to form carbon dioxide and release heat.
107295. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
107296. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107297. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

107298. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
107299. Lead reacts with oxygen in air to form lead(II) oxide.
107300. Phosphorus reacts with oxygen to form phosphorus pentoxide.
107301. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
107302. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
107303. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
107304. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
107305. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
107306. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
107307. Hydrogen combines with oxygen to form water.
107308. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
107309. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
107310. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107311. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
107312. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
107313. Magnesium reacts with oxygen in air to form magnesium oxide.
107314. Hydrogen reacts with oxygen to form water.
107315. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
107316. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
107317. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
107318. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
107319. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
107320. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
107321. Nitrogen combines with hydrogen to form ammonia.
107322. Hydrogen burns in air to form water vapor and release heat.
107323. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
107324. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107325. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
107326. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
107327. Calcium reacts with oxygen in air to form calcium oxide.
107328. Nitrogen reacts with oxygen to form nitrogen oxides.
107329. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
107330. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
107331. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
107332. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
107333. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
107334. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
107335. Sulfur combines with oxygen to form sulfur dioxide.
107336. Methane burns in air to form carbon dioxide and water vapor and release heat.
107337. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
107338. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107339. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
107340. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
107341. Aluminium reacts with oxygen in air to form aluminium oxide.
107342. Silicon reacts with oxygen to form silicon dioxide.
107343. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
107344. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
107345. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
107346. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
107347. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
107348. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
107349. Carbon combines with oxygen to form carbon dioxide.
107350. Ethane burns in air to form carbon dioxide and water vapor and release heat.
107351. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
107352. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107353. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
107354. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
107355. Zinc reacts with oxygen in air to form zinc oxide.
107356. Carbon reacts with oxygen to form carbon dioxide.
107357. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
107358. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
107359. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
107360. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
107361. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
107362. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
107363. Phosphorus combines with oxygen to form phosphorus pentoxide.
107364. Propane burns in air to form carbon dioxide and water vapor and release heat.
107365. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
107366. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107367. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
107368. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
107369. Iron reacts with oxygen in air to form iron(III) oxide.
107370. Sulfur reacts with oxygen to form sulfur dioxide.
107371. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
107372. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
107373. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
107374. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
107375. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
107376. On heating, hydrogen peroxide decomposes to form water and oxygen.
107377. Magnesium combines with oxygen to form magnesium oxide.
107378. Butane burns in air to form carbon dioxide and water vapor and release heat.
107379. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
107380. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107381. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
107382. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
107383. Copper reacts with oxygen in air to form copper(II) oxide.
107384. Phosphorus reacts with oxygen to form phosphorus pentoxide.
107385. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
107386. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
107387. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
107388. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

107389. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

107390. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

107391. Iron combines with sulfur to form iron sulfide.

107392. Carbon Monoxide burns in air to form carbon dioxide and release heat.

107393. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

107394. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107395. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.

107396. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

107397. Lead reacts with oxygen in air to form lead(II) oxide.

107398. Hydrogen reacts with oxygen to form water.

107399. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

107400. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

107401. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

107402. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

107403. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

107404. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

107405. Calcium Oxide combines with water to form calcium hydroxide.

107406. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

107407. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

107408. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107409. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.

107410. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

107411. Magnesium reacts with oxygen in air to form magnesium oxide.

107412. Nitrogen reacts with oxygen to form nitrogen oxides.

107413. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

107414. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

107415. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

107416. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

107417. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

107418. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

107419. Hydrogen combines with oxygen to form water.

107420. Hydrogen burns in air to form water vapor and release heat.

107421. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

107422. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107423. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.

107424. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

107425. Calcium reacts with oxygen in air to form calcium oxide.

107426. Silicon reacts with oxygen to form silicon dioxide.

107427. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

107428. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

107429. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

107430. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

107431. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

107432. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

107433. Nitrogen combines with hydrogen to form ammonia.

107434. Methane burns in air to form carbon dioxide and water vapor and release heat.

107435. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

107436. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107437. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.

107438. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

107439. Aluminium reacts with oxygen in air to form aluminium oxide.

107440. Carbon reacts with oxygen to form carbon dioxide.

107441. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

107442. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

107443. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

107444. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

107445. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

107446. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

107447. Sulfur combines with oxygen to form sulfur dioxide.

107448. Ethane burns in air to form carbon dioxide and water vapor and release heat.

107449. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

107450. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107451. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.

107452. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

107453. Zinc reacts with oxygen in air to form zinc oxide.

107454. Sulfur reacts with oxygen to form sulfur dioxide.

107455. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

107456. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

107457. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

107458. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

107459. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

107460. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

107461. Carbon combines with oxygen to form carbon dioxide.

107462. Propane burns in air to form carbon dioxide and water vapor and release heat.

107463. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

107464. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107465. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

107466. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

107467. Iron reacts with oxygen in air to form iron(III) oxide.

107468. Phosphorus reacts with oxygen to form phosphorus pentoxide.

107469. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

107470. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

107471. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

107472. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

107473. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

107474. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

107475. Phosphorus combines with oxygen to form phosphorus pentoxide.

107476. Butane burns in air to form carbon dioxide and water vapor and release heat.

107477. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

107478. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107479. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

107480. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
107481. Copper reacts with oxygen in air to form copper(II) oxide.
107482. Hydrogen reacts with oxygen to form water.
107483. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
107484. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
107485. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
107486. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
107487. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
107488. On heating, hydrogen peroxide decomposes to form water and oxygen.
107489. Magnesium combines with oxygen to form magnesium oxide.
107490. Carbon Monoxide burns in air to form carbon dioxide and release heat.
107491. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
107492. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107493. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
107494. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
107495. Lead reacts with oxygen in air to form lead(II) oxide.
107496. Nitrogen reacts with oxygen to form nitrogen oxides.
107497. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
107498. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
107499. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
107500. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
107501. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
107502. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
107503. Iron combines with sulfur to form iron sulfide.
107504. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
107505. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
107506. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107507. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
107508. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
107509. Magnesium reacts with oxygen in air to form magnesium oxide.
107510. Silicon reacts with oxygen to form silicon dioxide.
107511. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
107512. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
107513. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
107514. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
107515. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
107516. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
107517. Calcium Oxide combines with water to form calcium hydroxide.
107518. Hydrogen burns in air to form water vapor and release heat.
107519. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
107520. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107521. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
107522. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
107523. Calcium reacts with oxygen in air to form calcium oxide.
107524. Carbon reacts with oxygen to form carbon dioxide.
107525. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
107526. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
107527. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
107528. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
107529. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
107530. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
107531. Hydrogen combines with oxygen to form water.
107532. Methane burns in air to form carbon dioxide and water vapor and release heat.
107533. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
107534. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107535. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
107536. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
107537. Aluminium reacts with oxygen in air to form aluminium oxide.
107538. Sulfur reacts with oxygen to form sulfur dioxide.
107539. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
107540. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
107541. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
107542. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
107543. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
107544. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
107545. Nitrogen combines with hydrogen to form ammonia.
107546. Ethane burns in air to form carbon dioxide and water vapor and release heat.
107547. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
107548. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107549. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
107550. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
107551. Zinc reacts with oxygen in air to form zinc oxide.
107552. Phosphorus reacts with oxygen to form phosphorus pentoxide.
107553. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
107554. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
107555. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
107556. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
107557. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
107558. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
107559. Sulfur combines with oxygen to form sulfur dioxide.
107560. Propane burns in air to form carbon dioxide and water vapor and release heat.
107561. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
107562. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107563. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
107564. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
107565. Iron reacts with oxygen in air to form iron(III) oxide.
107566. Hydrogen reacts with oxygen to form water.
107567. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
107568. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
107569. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
107570. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
107571. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

107572. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
107573. Carbon combines with oxygen to form carbon dioxide.
107574. Butane burns in air to form carbon dioxide and water vapor and release heat.
107575. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
107576. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107577. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
107578. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
107579. Copper reacts with oxygen in air to form copper(II) oxide.
107580. Nitrogen reacts with oxygen to form nitrogen oxides.
107581. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
107582. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
107583. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
107584. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
107585. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
107586. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
107587. Phosphorus combines with oxygen to form phosphorus pentoxide.
107588. Carbon Monoxide burns in air to form carbon dioxide and release heat.
107589. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
107590. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107591. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
107592. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
107593. Lead reacts with oxygen in air to form lead(II) oxide.
107594. Silicon reacts with oxygen to form silicon dioxide.
107595. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
107596. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
107597. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
107598. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
107599. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
107600. On heating, hydrogen peroxide decomposes to form water and oxygen.
107601. Magnesium combines with oxygen to form magnesium oxide.
107602. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
107603. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
107604. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107605. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
107606. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
107607. Magnesium reacts with oxygen in air to form magnesium oxide.
107608. Carbon reacts with oxygen to form carbon dioxide.
107609. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
107610. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
107611. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
107612. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
107613. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
107614. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
107615. Iron combines with sulfur to form iron sulfide.
107616. Hydrogen burns in air to form water vapor and release heat.
107617. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
107618. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107619. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
107620. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
107621. Calcium reacts with oxygen in air to form calcium oxide.
107622. Sulfur reacts with oxygen to form sulfur dioxide.
107623. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
107624. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
107625. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
107626. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
107627. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
107628. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
107629. Calcium Oxide combines with water to form calcium hydroxide.
107630. Methane burns in air to form carbon dioxide and water vapor and release heat.
107631. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
107632. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107633. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
107634. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
107635. Aluminium reacts with oxygen in air to form aluminium oxide.
107636. Phosphorus reacts with oxygen to form phosphorus pentoxide.
107637. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
107638. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
107639. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
107640. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
107641. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
107642. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
107643. Hydrogen combines with oxygen to form water.
107644. Ethane burns in air to form carbon dioxide and water vapor and release heat.
107645. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
107646. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107647. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
107648. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
107649. Zinc reacts with oxygen in air to form zinc oxide.
107650. Hydrogen reacts with oxygen to form water.
107651. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
107652. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
107653. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
107654. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
107655. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
107656. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
107657. Nitrogen combines with hydrogen to form ammonia.
107658. Propane burns in air to form carbon dioxide and water vapor and release heat.
107659. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
107660. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107661. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
107662. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
107663. Iron reacts with oxygen in air to form iron(III) oxide.

107664. Nitrogen reacts with oxygen to form nitrogen oxides.
107665. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
107666. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
107667. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
107668. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
107669. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
107670. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
107671. Sulfur combines with oxygen to form sulfur dioxide.
107672. Butane burns in air to form carbon dioxide and water vapor and release heat.
107673. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
107674. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107675. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
107676. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
107677. Copper reacts with oxygen in air to form copper(II) oxide.
107678. Silicon reacts with oxygen to form silicon dioxide.
107679. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
107680. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
107681. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
107682. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
107683. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
107684. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
107685. Carbon combines with oxygen to form carbon dioxide.
107686. Carbon Monoxide burns in air to form carbon dioxide and release heat.
107687. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
107688. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107689. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
107690. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
107691. Lead reacts with oxygen in air to form lead(II) oxide.
107692. Carbon reacts with oxygen to form carbon dioxide.
107693. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
107694. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
107695. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
107696. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
107697. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
107698. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
107699. Phosphorus combines with oxygen to form phosphorus pentoxide.
107700. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
107701. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
107702. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107703. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
107704. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
107705. Magnesium reacts with oxygen in air to form magnesium oxide.
107706. Sulfur reacts with oxygen to form sulfur dioxide.
107707. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
107708. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
107709. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
107710. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
107711. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
107712. On heating, hydrogen peroxide decomposes to form water and oxygen.
107713. Magnesium combines with oxygen to form magnesium oxide.
107714. Hydrogen burns in air to form water vapor and release heat.
107715. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
107716. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107717. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
107718. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
107719. Calcium reacts with oxygen in air to form calcium oxide.
107720. Phosphorus reacts with oxygen to form phosphorus pentoxide.
107721. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
107722. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
107723. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
107724. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
107725. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
107726. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
107727. Iron combines with sulfur to form iron sulfide.
107728. Methane burns in air to form carbon dioxide and water vapor and release heat.
107729. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
107730. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107731. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
107732. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
107733. Aluminium reacts with oxygen in air to form aluminium oxide.
107734. Hydrogen reacts with oxygen to form water.
107735. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
107736. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
107737. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
107738. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
107739. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
107740. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
107741. Calcium Oxide combines with water to form calcium hydroxide.
107742. Ethane burns in air to form carbon dioxide and water vapor and release heat.
107743. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
107744. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107745. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
107746. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
107747. Zinc reacts with oxygen in air to form zinc oxide.
107748. Nitrogen reacts with oxygen to form nitrogen oxides.
107749. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
107750. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
107751. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
107752. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
107753. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
107754. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

107755. Hydrogen combines with oxygen to form water.
107756. Propane burns in air to form carbon dioxide and water vapor and release heat.
107757. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
107758. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107759. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
107760. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
107761. Iron reacts with oxygen in air to form iron(III) oxide.
107762. Silicon reacts with oxygen to form silicon dioxide.
107763. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
107764. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
107765. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
107766. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
107767. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
107768. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
107769. Nitrogen combines with hydrogen to form ammonia.
107770. Butane burns in air to form carbon dioxide and water vapor and release heat.
107771. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
107772. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107773. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
107774. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
107775. Copper reacts with oxygen in air to form copper(II) oxide.
107776. Carbon reacts with oxygen to form carbon dioxide.
107777. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
107778. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
107779. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
107780. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
107781. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
107782. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
107783. Sulfur combines with oxygen to form sulfur dioxide.
107784. Carbon Monoxide burns in air to form carbon dioxide and release heat.
107785. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
107786. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107787. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
107788. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
107789. Lead reacts with oxygen in air to form lead(II) oxide.
107790. Sulfur reacts with oxygen to form sulfur dioxide.
107791. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
107792. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
107793. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
107794. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
107795. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
107796. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
107797. Carbon combines with oxygen to form carbon dioxide.
107798. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
107799. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
107800. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107801. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
107802. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
107803. Magnesium reacts with oxygen in air to form magnesium oxide.
107804. Phosphorus reacts with oxygen to form phosphorus pentoxide.
107805. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
107806. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
107807. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
107808. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
107809. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
107810. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
107811. Phosphorus combines with oxygen to form phosphorus pentoxide.
107812. Hydrogen burns in air to form water vapor and release heat.
107813. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
107814. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107815. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
107816. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
107817. Calcium reacts with oxygen in air to form calcium oxide.
107818. Hydrogen reacts with oxygen to form water.
107819. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
107820. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
107821. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
107822. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
107823. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
107824. On heating, hydrogen peroxide decomposes to form water and oxygen.
107825. Magnesium combines with oxygen to form magnesium oxide.
107826. Methane burns in air to form carbon dioxide and water vapor and release heat.
107827. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
107828. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107829. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
107830. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
107831. Aluminium reacts with oxygen in air to form aluminium oxide.
107832. Nitrogen reacts with oxygen to form nitrogen oxides.
107833. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
107834. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
107835. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
107836. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
107837. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
107838. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
107839. Iron combines with sulfur to form iron sulfide.
107840. Ethane burns in air to form carbon dioxide and water vapor and release heat.
107841. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
107842. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107843. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
107844. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
107845. Zinc reacts with oxygen in air to form zinc oxide.
107846. Silicon reacts with oxygen to form silicon dioxide.
107847. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

107848. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

107849. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

107850. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

107851. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

107852. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

107853. Calcium Oxide combines with water to form calcium hydroxide.

107854. Propane burns in air to form carbon dioxide and water vapor and release heat.

107855. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

107856. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107857. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.

107858. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

107859. Iron reacts with oxygen in air to form iron(III) oxide.

107860. Carbon reacts with oxygen to form carbon dioxide.

107861. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

107862. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

107863. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

107864. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

107865. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

107866. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

107867. Hydrogen combines with oxygen to form water.

107868. Butane burns in air to form carbon dioxide and water vapor and release heat.

107869. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

107870. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107871. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.

107872. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

107873. Copper reacts with oxygen in air to form copper(II) oxide.

107874. Sulfur reacts with oxygen to form sulfur dioxide.

107875. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.

107876. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

107877. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

107878. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

107879. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

107880. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

107881. Nitrogen combines with hydrogen to form ammonia.

107882. Carbon Monoxide burns in air to form carbon dioxide and release heat.

107883. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

107884. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107885. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.

107886. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

107887. Lead reacts with oxygen in air to form lead(II) oxide.

107888. Phosphorus reacts with oxygen to form phosphorus pentoxide.

107889. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

107890. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

107891. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

107892. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

107893. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

107894. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

107895. Sulfur combines with oxygen to form sulfur dioxide.

107896. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

107897. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

107898. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107899. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.

107900. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

107901. Magnesium reacts with oxygen in air to form magnesium oxide.

107902. Hydrogen reacts with oxygen to form water.

107903. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

107904. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

107905. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

107906. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

107907. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

107908. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

107909. Carbon combines with oxygen to form carbon dioxide.

107910. Hydrogen burns in air to form water vapor and release heat.

107911. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

107912. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107913. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.

107914. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

107915. Calcium reacts with oxygen in air to form calcium oxide.

107916. Nitrogen reacts with oxygen to form nitrogen oxides.

107917. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

107918. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

107919. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

107920. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

107921. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

107922. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

107923. Phosphorus combines with oxygen to form phosphorus pentoxide.

107924. Methane burns in air to form carbon dioxide and water vapor and release heat.

107925. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

107926. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

107927. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.

107928. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

107929. Aluminium reacts with oxygen in air to form aluminium oxide.

107930. Silicon reacts with oxygen to form silicon dioxide.

107931. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

107932. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

107933. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

107934. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

107935. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

107936. On heating, hydrogen peroxide decomposes to form water and oxygen.

107937. Magnesium combines with oxygen to form magnesium oxide.

107938. Ethane burns in air to form carbon dioxide and water vapor and release heat.

107939. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
107940. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107941. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
107942. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
107943. Zinc reacts with oxygen in air to form zinc oxide.
107944. Carbon reacts with oxygen to form carbon dioxide.
107945. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
107946. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
107947. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
107948. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
107949. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
107950. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
107951. Iron combines with sulfur to form iron sulfide.
107952. Propane burns in air to form carbon dioxide and water vapor and release heat.
107953. Copper(I) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
107954. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107955. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
107956. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
107957. Iron reacts with oxygen in air to form iron(III) oxide.
107958. Sulfur reacts with oxygen to form sulfur dioxide.
107959. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
107960. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
107961. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
107962. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
107963. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
107964. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
107965. Calcium Oxide combines with water to form calcium hydroxide.
107966. Butane burns in air to form carbon dioxide and water vapor and release heat.
107967. Copper(I) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
107968. Copper(I) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107969. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
107970. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
107971. Copper reacts with oxygen in air to form copper(II) oxide.
107972. Phosphorus reacts with oxygen to form phosphorus pentoxide.
107973. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
107974. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
107975. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
107976. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
107977. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
107978. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
107979. Hydrogen combines with oxygen to form water.
107980. Carbon Monoxide burns in air to form carbon dioxide and release heat.
107981. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
107982. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107983. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
107984. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
107985. Lead reacts with oxygen in air to form lead(II) oxide.
107986. Hydrogen reacts with oxygen to form water.
107987. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
107988. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
107989. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
107990. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
107991. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
107992. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
107993. Nitrogen combines with hydrogen to form ammonia.
107994. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
107995. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
107996. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
107997. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
107998. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
107999. Magnesium reacts with oxygen in air to form magnesium oxide.
108000. Nitrogen reacts with oxygen to form nitrogen oxides.
108001. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
108002. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
108003. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
108004. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
108005. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
108006. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
108007. Sulfur combines with oxygen to form sulfur dioxide.
108008. Hydrogen burns in air to form water vapor and release heat.
108009. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
108010. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108011. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
108012. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
108013. Calcium reacts with oxygen in air to form calcium oxide.
108014. Silicon reacts with oxygen to form silicon dioxide.
108015. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
108016. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
108017. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
108018. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
108019. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
108020. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
108021. Carbon combines with oxygen to form carbon dioxide.
108022. Methane burns in air to form carbon dioxide and water vapor and release heat.
108023. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
108024. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108025. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
108026. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
108027. Aluminium reacts with oxygen in air to form aluminium oxide.
108028. Carbon reacts with oxygen to form carbon dioxide.
108029. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

108030. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
108031. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
108032. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
108033. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
108034. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
108035. Phosphorus combines with oxygen to form phosphorus pentoxide.
108036. Ethane burns in air to form carbon dioxide and water vapor and release heat.
108037. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
108038. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108039. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
108040. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
108041. Zinc reacts with oxygen in air to form zinc oxide.
108042. Sulfur reacts with oxygen to form sulfur dioxide.
108043. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
108044. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
108045. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
108046. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
108047. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
108048. On heating, hydrogen peroxide decomposes to form water and oxygen.
108049. Magnesium combines with oxygen to form magnesium oxide.
108050. Propane burns in air to form carbon dioxide and water vapor and release heat.
108051. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
108052. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108053. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
108054. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
108055. Iron reacts with oxygen in air to form iron(III) oxide.
108056. Phosphorus reacts with oxygen to form phosphorus pentoxide.
108057. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
108058. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
108059. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
108060. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
108061. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
108062. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
108063. Iron combines with sulfur to form iron sulfide.
108064. Butane burns in air to form carbon dioxide and water vapor and release heat.
108065. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
108066. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108067. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
108068. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
108069. Copper reacts with oxygen in air to form copper(II) oxide.
108070. Hydrogen reacts with oxygen to form water.
108071. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
108072. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
108073. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
108074. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
108075. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
108076. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
108077. Calcium Oxide combines with water to form calcium hydroxide.
108078. Carbon Monoxide burns in air to form carbon dioxide and release heat.
108079. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
108080. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108081. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
108082. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
108083. Lead reacts with oxygen in air to form lead(II) oxide.
108084. Nitrogen reacts with oxygen to form nitrogen oxides.
108085. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
108086. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
108087. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
108088. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
108089. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
108090. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
108091. Hydrogen combines with oxygen to form water.
108092. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
108093. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
108094. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108095. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
108096. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
108097. Magnesium reacts with oxygen in air to form magnesium oxide.
108098. Silicon reacts with oxygen to form silicon dioxide.
108099. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
108100. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
108101. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
108102. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
108103. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
108104. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
108105. Nitrogen combines with hydrogen to form ammonia.
108106. Hydrogen burns in air to form water vapor and release heat.
108107. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
108108. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108109. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
108110. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
108111. Calcium reacts with oxygen in air to form calcium oxide.
108112. Carbon reacts with oxygen to form carbon dioxide.
108113. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
108114. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
108115. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
108116. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
108117. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
108118. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
108119. Sulfur combines with oxygen to form sulfur dioxide.
108120. Methane burns in air to form carbon dioxide and water vapor and release heat.

108121. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
108122. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108123. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
108124. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
108125. Aluminium reacts with oxygen in air to form aluminium oxide.
108126. Sulfur reacts with oxygen to form sulfur dioxide.
108127. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
108128. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
108129. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
108130. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
108131. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
108132. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
108133. Carbon combines with oxygen to form carbon dioxide.
108134. Ethane burns in air to form carbon dioxide and water vapor and release heat.
108135. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
108136. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108137. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
108138. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
108139. Zinc reacts with oxygen in air to form zinc oxide.
108140. Phosphorus reacts with oxygen to form phosphorus pentoxide.
108141. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
108142. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
108143. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
108144. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
108145. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
108146. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
108147. Phosphorus combines with oxygen to form phosphorus pentoxide.
108148. Propane burns in air to form carbon dioxide and water vapor and release heat.
108149. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
108150. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108151. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
108152. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
108153. Iron reacts with oxygen in air to form iron(III) oxide.
108154. Hydrogen reacts with oxygen to form water.
108155. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
108156. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
108157. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
108158. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
108159. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
108160. On heating, hydrogen peroxide decomposes to form water and oxygen.
108161. Magnesium combines with oxygen to form magnesium oxide.
108162. Butane burns in air to form carbon dioxide and water vapor and release heat.
108163. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
108164. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108165. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
108166. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
108167. Copper reacts with oxygen in air to form copper(II) oxide.
108168. Nitrogen reacts with oxygen to form nitrogen oxides.
108169. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
108170. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
108171. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
108172. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
108173. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
108174. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
108175. Iron combines with sulfur to form iron sulfide.
108176. Carbon Monoxide burns in air to form carbon dioxide and release heat.
108177. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
108178. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108179. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
108180. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
108181. Lead reacts with oxygen in air to form lead(II) oxide.
108182. Silicon reacts with oxygen to form silicon dioxide.
108183. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
108184. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
108185. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
108186. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
108187. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
108188. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
108189. Calcium Oxide combines with water to form calcium hydroxide.
108190. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
108191. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
108192. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108193. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
108194. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
108195. Magnesium reacts with oxygen in air to form magnesium oxide.
108196. Carbon reacts with oxygen to form carbon dioxide.
108197. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
108198. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
108199. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
108200. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
108201. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
108202. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
108203. Hydrogen combines with oxygen to form water.
108204. Hydrogen burns in air to form water vapor and release heat.
108205. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
108206. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108207. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
108208. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
108209. Calcium reacts with oxygen in air to form calcium oxide.
108210. Sulfur reacts with oxygen to form sulfur dioxide.
108211. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
108212. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
108213. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

108214. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
108215. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
108216. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
108217. Nitrogen combines with hydrogen to form ammonia.
108218. Methane burns in air to form carbon dioxide and water vapor and release heat.
108219. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
108220. Copper(I) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108221. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
108222. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
108223. Aluminium reacts with oxygen in air to form aluminium oxide.
108224. Phosphorus reacts with oxygen to form phosphorus pentoxide.
108225. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
108226. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
108227. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
108228. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
108229. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
108230. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
108231. Sulfur combines with oxygen to form sulfur dioxide.
108232. Ethane burns in air to form carbon dioxide and water vapor and release heat.
108233. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
108234. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108235. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
108236. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
108237. Zinc reacts with oxygen in air to form zinc oxide.
108238. Hydrogen reacts with oxygen to form water.
108239. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
108240. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
108241. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
108242. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
108243. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
108244. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
108245. Carbon combines with oxygen to form carbon dioxide.
108246. Propane burns in air to form carbon dioxide and water vapor and release heat.
108247. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
108248. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108249. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
108250. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
108251. Iron reacts with oxygen in air to form iron(III) oxide.
108252. Nitrogen reacts with oxygen to form nitrogen oxides.
108253. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
108254. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
108255. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
108256. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
108257. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
108258. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
108259. Phosphorus combines with oxygen to form phosphorus pentoxide.
108260. Butane burns in air to form carbon dioxide and water vapor and release heat.
108261. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
108262. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108263. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
108264. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
108265. Copper reacts with oxygen in air to form copper(II) oxide.
108266. Silicon reacts with oxygen to form silicon dioxide.
108267. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
108268. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
108269. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
108270. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
108271. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
108272. On heating, hydrogen peroxide decomposes to form water and oxygen.
108273. Magnesium combines with oxygen to form magnesium oxide.
108274. Carbon Monoxide burns in air to form carbon dioxide and release heat.
108275. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
108276. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108277. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
108278. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
108279. Lead reacts with oxygen in air to form lead(II) oxide.
108280. Carbon reacts with oxygen to form carbon dioxide.
108281. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
108282. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
108283. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
108284. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
108285. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
108286. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
108287. Iron combines with sulfur to form iron sulfide.
108288. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
108289. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
108290. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108291. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
108292. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
108293. Magnesium reacts with oxygen in air to form magnesium oxide.
108294. Sulfur reacts with oxygen to form sulfur dioxide.
108295. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
108296. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
108297. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
108298. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
108299. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
108300. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
108301. Calcium Oxide combines with water to form calcium hydroxide.
108302. Hydrogen burns in air to form water vapor and release heat.
108303. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
108304. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

108305. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
108306. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
108307. Calcium reacts with oxygen in air to form calcium oxide.
108308. Phosphorus reacts with oxygen to form phosphorus pentoxide.
108309. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
108310. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
108311. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
108312. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
108313. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
108314. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
108315. Hydrogen combines with oxygen to form water.
108316. Methane burns in air to form carbon dioxide and water vapor and release heat.
108317. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
108318. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108319. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
108320. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
108321. Aluminium reacts with oxygen in air to form aluminium oxide.
108322. Hydrogen reacts with oxygen to form water.
108323. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
108324. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
108325. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
108326. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
108327. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
108328. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
108329. Nitrogen combines with hydrogen to form ammonia.
108330. Ethane burns in air to form carbon dioxide and water vapor and release heat.
108331. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
108332. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108333. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
108334. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
108335. Zinc reacts with oxygen in air to form zinc oxide.
108336. Nitrogen reacts with oxygen to form nitrogen oxides.
108337. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
108338. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
108339. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
108340. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
108341. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
108342. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
108343. Sulfur combines with oxygen to form sulfur dioxide.
108344. Propane burns in air to form carbon dioxide and water vapor and release heat.
108345. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
108346. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108347. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
108348. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
108349. Iron reacts with oxygen in air to form iron(III) oxide.
108350. Silicon reacts with oxygen to form silicon dioxide.
108351. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
108352. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
108353. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
108354. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
108355. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
108356. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
108357. Carbon combines with oxygen to form carbon dioxide.
108358. Butane burns in air to form carbon dioxide and water vapor and release heat.
108359. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
108360. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108361. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
108362. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
108363. Copper reacts with oxygen in air to form copper(II) oxide.
108364. Carbon reacts with oxygen to form carbon dioxide.
108365. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
108366. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
108367. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
108368. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
108369. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
108370. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
108371. Phosphorus combines with oxygen to form phosphorus pentoxide.
108372. Carbon Monoxide burns in air to form carbon dioxide and release heat.
108373. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
108374. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108375. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
108376. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
108377. Lead reacts with oxygen in air to form lead(II) oxide.
108378. Sulfur reacts with oxygen to form sulfur dioxide.
108379. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
108380. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
108381. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
108382. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
108383. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
108384. On heating, hydrogen peroxide decomposes to form water and oxygen.
108385. Magnesium combines with oxygen to form magnesium oxide.
108386. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
108387. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
108388. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108389. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
108390. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
108391. Magnesium reacts with oxygen in air to form magnesium oxide.
108392. Phosphorus reacts with oxygen to form phosphorus pentoxide.
108393. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
108394. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
108395. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

108396. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
108397. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
108398. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
108399. Iron combines with sulfur to form iron sulfide.
108400. Hydrogen burns in air to form water vapor and release heat.
108401. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
108402. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108403. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
108404. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
108405. Calcium reacts with oxygen in air to form calcium oxide.
108406. Hydrogen reacts with oxygen to form water.
108407. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
108408. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
108409. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
108410. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
108411. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
108412. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
108413. Calcium Oxide combines with water to form calcium hydroxide.
108414. Methane burns in air to form carbon dioxide and water vapor and release heat.
108415. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
108416. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108417. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
108418. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
108419. Aluminium reacts with oxygen in air to form aluminium oxide.
108420. Nitrogen reacts with oxygen to form nitrogen oxides.
108421. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
108422. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
108423. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
108424. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
108425. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
108426. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
108427. Hydrogen combines with oxygen to form water.
108428. Ethane burns in air to form carbon dioxide and water vapor and release heat.
108429. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
108430. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108431. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
108432. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
108433. Zinc reacts with oxygen in air to form zinc oxide.
108434. Silicon reacts with oxygen to form silicon dioxide.
108435. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
108436. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
108437. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
108438. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
108439. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
108440. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
108441. Nitrogen combines with hydrogen to form ammonia.
108442. Propane burns in air to form carbon dioxide and water vapor and release heat.
108443. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
108444. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108445. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
108446. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
108447. Iron reacts with oxygen in air to form iron(III) oxide.
108448. Carbon reacts with oxygen to form carbon dioxide.
108449. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
108450. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
108451. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
108452. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
108453. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
108454. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
108455. Sulfur combines with oxygen to form sulfur dioxide.
108456. Butane burns in air to form carbon dioxide and water vapor and release heat.
108457. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
108458. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108459. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
108460. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
108461. Copper reacts with oxygen in air to form copper(II) oxide.
108462. Sulfur reacts with oxygen to form sulfur dioxide.
108463. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
108464. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
108465. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
108466. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
108467. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
108468. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
108469. Carbon combines with oxygen to form carbon dioxide.
108470. Carbon Monoxide burns in air to form carbon dioxide and release heat.
108471. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
108472. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108473. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
108474. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
108475. Lead reacts with oxygen in air to form lead(II) oxide.
108476. Phosphorus reacts with oxygen to form phosphorus pentoxide.
108477. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
108478. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
108479. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
108480. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
108481. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
108482. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
108483. Phosphorus combines with oxygen to form phosphorus pentoxide.
108484. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
108485. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
108486. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

108487. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

108488. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

108489. Magnesium reacts with oxygen in air to form magnesium oxide.

108490. Hydrogen reacts with oxygen to form water.

108491. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

108492. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

108493. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

108494. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

108495. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

108496. On heating, hydrogen peroxide decomposes to form water and oxygen.

108497. Magnesium combines with oxygen to form magnesium oxide.

108498. Hydrogen burns in air to form water vapor and release heat.

108499. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

108500. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

108501. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

108502. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

108503. Calcium reacts with oxygen in air to form calcium oxide.

108504. Nitrogen reacts with oxygen to form nitrogen oxides.

108505. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

108506. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

108507. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

108508. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

108509. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

108510. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

108511. Iron combines with sulfur to form iron sulfide.

108512. Methane burns in air to form carbon dioxide and water vapor and release heat.

108513. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

108514. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

108515. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

108516. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

108517. Aluminium reacts with oxygen in air to form aluminium oxide.

108518. Silicon reacts with oxygen to form silicon dioxide.

108519. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.

108520. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

108521. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

108522. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

108523. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

108524. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

108525. Calcium Oxide combines with water to form calcium hydroxide.

108526. Ethane burns in air to form carbon dioxide and water vapor and release heat.

108527. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

108528. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

108529. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.

108530. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

108531. Zinc reacts with oxygen in air to form zinc oxide.

108532. Carbon reacts with oxygen to form carbon dioxide.

108533. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

108534. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

108535. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

108536. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

108537. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

108538. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

108539. Hydrogen combines with oxygen to form water.

108540. Propane burns in air to form carbon dioxide and water vapor and release heat.

108541. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

108542. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

108543. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.

108544. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

108545. Iron reacts with oxygen in air to form iron(III) oxide.

108546. Sulfur reacts with oxygen to form sulfur dioxide.

108547. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

108548. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

108549. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

108550. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

108551. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

108552. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

108553. Nitrogen combines with hydrogen to form ammonia.

108554. Butane burns in air to form carbon dioxide and water vapor and release heat.

108555. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

108556. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

108557. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.

108558. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

108559. Copper reacts with oxygen in air to form copper(II) oxide.

108560. Phosphorus reacts with oxygen to form phosphorus pentoxide.

108561. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

108562. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

108563. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

108564. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

108565. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

108566. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

108567. Sulfur combines with oxygen to form sulfur dioxide.

108568. Carbon Monoxide burns in air to form carbon dioxide and release heat.

108569. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.

108570. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

108571. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.

108572. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

108573. Lead reacts with oxygen in air to form lead(II) oxide.

108574. Hydrogen reacts with oxygen to form water.

108575. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.

108576. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

108577. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

108578. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

108579. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
108580. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
108581. Carbon combines with oxygen to form carbon dioxide.
108582. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
108583. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
108584. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108585. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
108586. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
108587. Magnesium reacts with oxygen in air to form magnesium oxide.
108588. Nitrogen reacts with oxygen to form nitrogen oxides.
108589. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
108590. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
108591. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
108592. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
108593. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
108594. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
108595. Phosphorus combines with oxygen to form phosphorus pentoxide.
108596. Hydrogen burns in air to form water vapor and release heat.
108597. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
108598. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108599. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
108600. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
108601. Calcium reacts with oxygen in air to form calcium oxide.
108602. Silicon reacts with oxygen to form silicon dioxide.
108603. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
108604. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
108605. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
108606. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
108607. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
108608. On heating, hydrogen peroxide decomposes to form water and oxygen.
108609. Magnesium combines with oxygen to form magnesium oxide.
108610. Methane burns in air to form carbon dioxide and water vapor and release heat.
108611. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
108612. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108613. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
108614. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
108615. Aluminium reacts with oxygen in air to form aluminium oxide.
108616. Carbon reacts with oxygen to form carbon dioxide.
108617. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
108618. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
108619. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
108620. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
108621. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
108622. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
108623. Iron combines with sulfur to form iron sulfide.
108624. Ethane burns in air to form carbon dioxide and water vapor and release heat.
108625. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
108626. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108627. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
108628. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
108629. Zinc reacts with oxygen in air to form zinc oxide.
108630. Sulfur reacts with oxygen to form sulfur dioxide.
108631. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
108632. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
108633. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
108634. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
108635. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
108636. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
108637. Calcium Oxide combines with water to form calcium hydroxide.
108638. Propane burns in air to form carbon dioxide and water vapor and release heat.
108639. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
108640. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108641. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
108642. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
108643. Iron reacts with oxygen in air to form iron(III) oxide.
108644. Phosphorus reacts with oxygen to form phosphorus pentoxide.
108645. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
108646. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
108647. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
108648. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
108649. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
108650. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
108651. Hydrogen combines with oxygen to form water.
108652. Butane burns in air to form carbon dioxide and water vapor and release heat.
108653. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
108654. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108655. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
108656. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
108657. Copper reacts with oxygen in air to form copper(II) oxide.
108658. Hydrogen reacts with oxygen to form water.
108659. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
108660. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
108661. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
108662. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
108663. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
108664. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
108665. Nitrogen combines with hydrogen to form ammonia.
108666. Carbon Monoxide burns in air to form carbon dioxide and release heat.
108667. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
108668. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108669. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.

108670. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
108671. Lead reacts with oxygen in air to form lead(II) oxide.
108672. Nitrogen reacts with oxygen to form nitrogen oxides.
108673. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
108674. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
108675. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
108676. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
108677. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
108678. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
108679. Sulfur combines with oxygen to form sulfur dioxide.
108680. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
108681. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
108682. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108683. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
108684. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
108685. Magnesium reacts with oxygen in air to form magnesium oxide.
108686. Silicon reacts with oxygen to form silicon dioxide.
108687. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
108688. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
108689. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
108690. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
108691. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
108692. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
108693. Carbon combines with oxygen to form carbon dioxide.
108694. Hydrogen burns in air to form water vapor and release heat.
108695. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
108696. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108697. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
108698. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
108699. Calcium reacts with oxygen in air to form calcium oxide.
108700. Carbon reacts with oxygen to form carbon dioxide.
108701. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
108702. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
108703. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
108704. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
108705. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
108706. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
108707. Phosphorus combines with oxygen to form phosphorus pentoxide.
108708. Methane burns in air to form carbon dioxide and water vapor and release heat.
108709. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
108710. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108711. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
108712. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
108713. Aluminium reacts with oxygen in air to form aluminium oxide.
108714. Sulfur reacts with oxygen to form sulfur dioxide.
108715. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
108716. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
108717. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
108718. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
108719. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
108720. On heating, hydrogen peroxide decomposes to form water and oxygen.
108721. Magnesium combines with oxygen to form magnesium oxide.
108722. Ethane burns in air to form carbon dioxide and water vapor and release heat.
108723. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
108724. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108725. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
108726. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
108727. Zinc reacts with oxygen in air to form zinc oxide.
108728. Phosphorus reacts with oxygen to form phosphorus pentoxide.
108729. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
108730. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
108731. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
108732. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
108733. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
108734. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
108735. Iron combines with sulfur to form iron sulfide.
108736. Propane burns in air to form carbon dioxide and water vapor and release heat.
108737. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
108738. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108739. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
108740. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
108741. Iron reacts with oxygen in air to form iron(III) oxide.
108742. Hydrogen reacts with oxygen to form water.
108743. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
108744. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
108745. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
108746. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
108747. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
108748. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
108749. Calcium Oxide combines with water to form calcium hydroxide.
108750. Butane burns in air to form carbon dioxide and water vapor and release heat.
108751. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
108752. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108753. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
108754. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
108755. Copper reacts with oxygen in air to form copper(II) oxide.
108756. Nitrogen reacts with oxygen to form nitrogen oxides.
108757. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
108758. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
108759. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
108760. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

108761. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
108762. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
108763. Hydrogen combines with oxygen to form water.
108764. Carbon Monoxide burns in air to form carbon dioxide and release heat.
108765. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
108766. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108767. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
108768. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
108769. Lead reacts with oxygen in air to form lead(II) oxide.
108770. Silicon reacts with oxygen to form silicon dioxide.
108771. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
108772. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
108773. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
108774. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
108775. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
108776. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
108777. Nitrogen combines with hydrogen to form ammonia.
108778. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
108779. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
108780. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108781. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
108782. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
108783. Magnesium reacts with oxygen in air to form magnesium oxide.
108784. Carbon reacts with oxygen to form carbon dioxide.
108785. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
108786. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
108787. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
108788. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
108789. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
108790. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
108791. Sulfur combines with oxygen to form sulfur dioxide.
108792. Hydrogen burns in air to form water vapor and release heat.
108793. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
108794. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108795. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
108796. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
108797. Calcium reacts with oxygen in air to form calcium oxide.
108798. Sulfur reacts with oxygen to form sulfur dioxide.
108799. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
108800. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
108801. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
108802. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
108803. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
108804. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
108805. Carbon combines with oxygen to form carbon dioxide.
108806. Methane burns in air to form carbon dioxide and water vapor and release heat.
108807. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
108808. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108809. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
108810. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
108811. Aluminium reacts with oxygen in air to form aluminium oxide.
108812. Phosphorus reacts with oxygen to form phosphorus pentoxide.
108813. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
108814. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
108815. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
108816. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
108817. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
108818. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
108819. Phosphorus combines with oxygen to form phosphorus pentoxide.
108820. Ethane burns in air to form carbon dioxide and water vapor and release heat.
108821. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
108822. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108823. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
108824. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
108825. Zinc reacts with oxygen in air to form zinc oxide.
108826. Hydrogen reacts with oxygen to form water.
108827. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
108828. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
108829. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
108830. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
108831. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
108832. On heating, hydrogen peroxide decomposes to form water and oxygen.
108833. Magnesium combines with oxygen to form magnesium oxide.
108834. Propane burns in air to form carbon dioxide and water vapor and release heat.
108835. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
108836. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108837. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
108838. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
108839. Iron reacts with oxygen in air to form iron(III) oxide.
108840. Nitrogen reacts with oxygen to form nitrogen oxides.
108841. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
108842. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
108843. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
108844. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
108845. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
108846. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
108847. Iron combines with sulfur to form iron sulfide.
108848. Butane burns in air to form carbon dioxide and water vapor and release heat.
108849. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
108850. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108851. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
108852. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

108853. Copper reacts with oxygen in air to form copper(II) oxide.
108854. Silicon reacts with oxygen to form silicon dioxide.
108855. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
108856. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
108857. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
108858. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
108859. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
108860. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
108861. Calcium Oxide combines with water to form calcium hydroxide.
108862. Carbon Monoxide burns in air to form carbon dioxide and release heat.
108863. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
108864. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108865. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
108866. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
108867. Lead reacts with oxygen in air to form lead(II) oxide.
108868. Carbon reacts with oxygen to form carbon dioxide.
108869. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
108870. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
108871. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
108872. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
108873. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
108874. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
108875. Hydrogen combines with oxygen to form water.
108876. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
108877. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
108878. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108879. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
108880. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
108881. Magnesium reacts with oxygen in air to form magnesium oxide.
108882. Sulfur reacts with oxygen to form sulfur dioxide.
108883. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
108884. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
108885. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
108886. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
108887. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
108888. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
108889. Nitrogen combines with hydrogen to form ammonia.
108890. Hydrogen burns in air to form water vapor and release heat.
108891. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
108892. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108893. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
108894. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
108895. Calcium reacts with oxygen in air to form calcium oxide.
108896. Phosphorus reacts with oxygen to form phosphorus pentoxide.
108897. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
108898. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
108899. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
108900. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
108901. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
108902. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
108903. Sulfur combines with oxygen to form sulfur dioxide.
108904. Methane burns in air to form carbon dioxide and water vapor and release heat.
108905. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
108906. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108907. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
108908. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
108909. Aluminium reacts with oxygen in air to form aluminium oxide.
108910. Hydrogen reacts with oxygen to form water.
108911. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
108912. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
108913. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
108914. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
108915. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
108916. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
108917. Carbon combines with oxygen to form carbon dioxide.
108918. Ethane burns in air to form carbon dioxide and water vapor and release heat.
108919. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
108920. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108921. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
108922. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
108923. Zinc reacts with oxygen in air to form zinc oxide.
108924. Nitrogen reacts with oxygen to form nitrogen oxides.
108925. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
108926. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
108927. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
108928. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
108929. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
108930. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
108931. Phosphorus combines with oxygen to form phosphorus pentoxide.
108932. Propane burns in air to form carbon dioxide and water vapor and release heat.
108933. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
108934. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108935. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
108936. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
108937. Iron reacts with oxygen in air to form iron(III) oxide.
108938. Silicon reacts with oxygen to form silicon dioxide.
108939. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
108940. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
108941. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
108942. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
108943. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

108944. On heating, hydrogen peroxide decomposes to form water and oxygen.
108945. Magnesium combines with oxygen to form magnesium oxide.
108946. Butane burns in air to form carbon dioxide and water vapor and release heat.
108947. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
108948. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108949. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
108950. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
108951. Copper reacts with oxygen in air to form copper(II) oxide.
108952. Carbon reacts with oxygen to form carbon dioxide.
108953. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
108954. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
108955. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
108956. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
108957. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
108958. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
108959. Iron combines with sulfur to form iron sulfide.
108960. Carbon Monoxide burns in air to form carbon dioxide and release heat.
108961. Copper(I) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
108962. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108963. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
108964. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
108965. Lead reacts with oxygen in air to form lead(II) oxide.
108966. Sulfur reacts with oxygen to form sulfur dioxide.
108967. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
108968. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
108969. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
108970. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
108971. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
108972. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
108973. Calcium Oxide combines with water to form calcium hydroxide.
108974. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
108975. Copper(I) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
108976. Copper(I) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108977. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
108978. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
108979. Magnesium reacts with oxygen in air to form magnesium oxide.
108980. Phosphorus reacts with oxygen to form phosphorus pentoxide.
108981. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
108982. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
108983. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
108984. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
108985. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
108986. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
108987. Hydrogen combines with oxygen to form water.
108988. Hydrogen burns in air to form water vapor and release heat.
108989. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
108990. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
108991. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
108992. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
108993. Calcium reacts with oxygen in air to form calcium oxide.
108994. Hydrogen reacts with oxygen to form water.
108995. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
108996. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
108997. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
108998. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
108999. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
109000. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
109001. Nitrogen combines with hydrogen to form ammonia.
109002. Methane burns in air to form carbon dioxide and water vapor and release heat.
109003. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
109004. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109005. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
109006. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
109007. Aluminium reacts with oxygen in air to form aluminium oxide.
109008. Nitrogen reacts with oxygen to form nitrogen oxides.
109009. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
109010. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
109011. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
109012. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
109013. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
109014. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
109015. Sulfur combines with oxygen to form sulfur dioxide.
109016. Ethane burns in air to form carbon dioxide and water vapor and release heat.
109017. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
109018. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109019. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
109020. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
109021. Zinc reacts with oxygen in air to form zinc oxide.
109022. Silicon reacts with oxygen to form silicon dioxide.
109023. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
109024. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
109025. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
109026. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
109027. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
109028. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
109029. Carbon combines with oxygen to form carbon dioxide.
109030. Propane burns in air to form carbon dioxide and water vapor and release heat.
109031. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
109032. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109033. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
109034. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

109035. Iron reacts with oxygen in air to form iron(III) oxide.
109036. Carbon reacts with oxygen to form carbon dioxide.
109037. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
109038. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
109039. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
109040. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
109041. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
109042. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
109043. Phosphorus combines with oxygen to form phosphorus pentoxide.
109044. Butane burns in air to form carbon dioxide and water vapor and release heat.
109045. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
109046. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109047. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
109048. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
109049. Copper reacts with oxygen in air to form copper(II) oxide.
109050. Sulfur reacts with oxygen to form sulfur dioxide.
109051. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
109052. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
109053. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
109054. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
109055. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
109056. On heating, hydrogen peroxide decomposes to form water and oxygen.
109057. Magnesium combines with oxygen to form magnesium oxide.
109058. Carbon Monoxide burns in air to form carbon dioxide and release heat.
109059. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
109060. Copper(I) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109061. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
109062. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
109063. Lead reacts with oxygen in air to form lead(II) oxide.
109064. Phosphorus reacts with oxygen to form phosphorus pentoxide.
109065. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
109066. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
109067. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
109068. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
109069. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
109070. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
109071. Iron combines with sulfur to form iron sulfide.
109072. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
109073. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
109074. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109075. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
109076. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
109077. Magnesium reacts with oxygen in air to form magnesium oxide.
109078. Hydrogen reacts with oxygen to form water.
109079. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
109080. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
109081. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
109082. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
109083. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
109084. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
109085. Calcium Oxide combines with water to form calcium hydroxide.
109086. Hydrogen burns in air to form water vapor and release heat.
109087. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
109088. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109089. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
109090. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
109091. Calcium reacts with oxygen in air to form calcium oxide.
109092. Nitrogen reacts with oxygen to form nitrogen oxides.
109093. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
109094. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
109095. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
109096. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
109097. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
109098. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
109099. Hydrogen combines with oxygen to form water.
109100. Methane burns in air to form carbon dioxide and water vapor and release heat.
109101. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
109102. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109103. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
109104. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
109105. Aluminium reacts with oxygen in air to form aluminium oxide.
109106. Silicon reacts with oxygen to form silicon dioxide.
109107. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
109108. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
109109. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
109110. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
109111. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
109112. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
109113. Nitrogen combines with hydrogen to form ammonia.
109114. Ethane burns in air to form carbon dioxide and water vapor and release heat.
109115. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
109116. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109117. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
109118. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
109119. Zinc reacts with oxygen in air to form zinc oxide.
109120. Carbon reacts with oxygen to form carbon dioxide.
109121. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
109122. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
109123. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
109124. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
109125. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

109126. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
109127. Sulfur combines with oxygen to form sulfur dioxide.
109128. Propane burns in air to form carbon dioxide and water vapor and release heat.
109129. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
109130. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109131. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
109132. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
109133. Iron reacts with oxygen in air to form iron(III) oxide.
109134. Sulfur reacts with oxygen to form sulfur dioxide.
109135. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
109136. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
109137. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
109138. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
109139. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
109140. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
109141. Carbon combines with oxygen to form carbon dioxide.
109142. Butane burns in air to form carbon dioxide and water vapor and release heat.
109143. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
109144. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109145. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
109146. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
109147. Copper reacts with oxygen in air to form copper(II) oxide.
109148. Phosphorus reacts with oxygen to form phosphorus pentoxide.
109149. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
109150. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
109151. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
109152. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
109153. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
109154. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
109155. Phosphorus combines with oxygen to form phosphorus pentoxide.
109156. Carbon Monoxide burns in air to form carbon dioxide and release heat.
109157. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
109158. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109159. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
109160. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
109161. Lead reacts with oxygen in air to form lead(II) oxide.
109162. Hydrogen reacts with oxygen to form water.
109163. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
109164. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
109165. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
109166. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
109167. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
109168. On heating, hydrogen peroxide decomposes to form water and oxygen.
109169. Magnesium combines with oxygen to form magnesium oxide.
109170. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
109171. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
109172. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109173. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
109174. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
109175. Magnesium reacts with oxygen in air to form magnesium oxide.
109176. Nitrogen reacts with oxygen to form nitrogen oxides.
109177. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
109178. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
109179. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
109180. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
109181. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
109182. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
109183. Iron combines with sulfur to form iron sulfide.
109184. Hydrogen burns in air to form water vapor and release heat.
109185. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
109186. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109187. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
109188. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
109189. Calcium reacts with oxygen in air to form calcium oxide.
109190. Silicon reacts with oxygen to form silicon dioxide.
109191. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
109192. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
109193. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
109194. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
109195. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
109196. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
109197. Calcium Oxide combines with water to form calcium hydroxide.
109198. Methane burns in air to form carbon dioxide and water vapor and release heat.
109199. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
109200. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109201. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
109202. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
109203. Aluminium reacts with oxygen in air to form aluminium oxide.
109204. Carbon reacts with oxygen to form carbon dioxide.
109205. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
109206. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
109207. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
109208. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
109209. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
109210. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
109211. Hydrogen combines with oxygen to form water.
109212. Ethane burns in air to form carbon dioxide and water vapor and release heat.
109213. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
109214. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109215. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
109216. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
109217. Zinc reacts with oxygen in air to form zinc oxide.
109218. Sulfur reacts with oxygen to form sulfur dioxide.

109219. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
109220. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
109221. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
109222. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
109223. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
109224. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
109225. Nitrogen combines with hydrogen to form ammonia.
109226. Propane burns in air to form carbon dioxide and water vapor and release heat.
109227. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
109228. Copper(I) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109229. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
109230. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
109231. Iron reacts with oxygen in air to form iron(III) oxide.
109232. Phosphorus reacts with oxygen to form phosphorus pentoxide.
109233. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
109234. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
109235. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
109236. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
109237. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
109238. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
109239. Sulfur combines with oxygen to form sulfur dioxide.
109240. Butane burns in air to form carbon dioxide and water vapor and release heat.
109241. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
109242. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109243. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
109244. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
109245. Copper reacts with oxygen in air to form copper(II) oxide.
109246. Hydrogen reacts with oxygen to form water.
109247. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
109248. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
109249. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
109250. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
109251. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
109252. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
109253. Carbon combines with oxygen to form carbon dioxide.
109254. Carbon Monoxide burns in air to form carbon dioxide and release heat.
109255. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
109256. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109257. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
109258. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
109259. Lead reacts with oxygen in air to form lead(II) oxide.
109260. Nitrogen reacts with oxygen to form nitrogen oxides.
109261. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
109262. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
109263. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
109264. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
109265. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
109266. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
109267. Phosphorus combines with oxygen to form phosphorus pentoxide.
109268. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
109269. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
109270. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109271. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
109272. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
109273. Magnesium reacts with oxygen in air to form magnesium oxide.
109274. Silicon reacts with oxygen to form silicon dioxide.
109275. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
109276. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
109277. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
109278. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
109279. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
109280. On heating, hydrogen peroxide decomposes to form water and oxygen.
109281. Magnesium combines with oxygen to form magnesium oxide.
109282. Hydrogen burns in air to form water vapor and release heat.
109283. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
109284. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109285. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
109286. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
109287. Calcium reacts with oxygen in air to form calcium oxide.
109288. Carbon reacts with oxygen to form carbon dioxide.
109289. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
109290. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
109291. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
109292. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
109293. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
109294. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
109295. Iron combines with sulfur to form iron sulfide.
109296. Methane burns in air to form carbon dioxide and water vapor and release heat.
109297. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
109298. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109299. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
109300. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
109301. Aluminium reacts with oxygen in air to form aluminium oxide.
109302. Sulfur reacts with oxygen to form sulfur dioxide.
109303. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
109304. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
109305. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
109306. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
109307. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
109308. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
109309. Calcium Oxide combines with water to form calcium hydroxide.

109310. Ethane burns in air to form carbon dioxide and water vapor and release heat.
109311. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
109312. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109313. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
109314. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
109315. Zinc reacts with oxygen in air to form zinc oxide.
109316. Phosphorus reacts with oxygen to form phosphorus pentoxide.
109317. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
109318. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
109319. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
109320. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
109321. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
109322. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
109323. Hydrogen combines with oxygen to form water.
109324. Propane burns in air to form carbon dioxide and water vapor and release heat.
109325. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
109326. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109327. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
109328. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
109329. Iron reacts with oxygen in air to form iron(III) oxide.
109330. Hydrogen reacts with oxygen to form water.
109331. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
109332. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
109333. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
109334. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
109335. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
109336. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
109337. Nitrogen combines with hydrogen to form ammonia.
109338. Butane burns in air to form carbon dioxide and water vapor and release heat.
109339. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
109340. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109341. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
109342. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
109343. Copper reacts with oxygen in air to form copper(II) oxide.
109344. Nitrogen reacts with oxygen to form nitrogen oxides.
109345. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
109346. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
109347. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
109348. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
109349. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
109350. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
109351. Sulfur combines with oxygen to form sulfur dioxide.
109352. Carbon Monoxide burns in air to form carbon dioxide and release heat.
109353. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
109354. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109355. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
109356. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
109357. Lead reacts with oxygen in air to form lead(II) oxide.
109358. Silicon reacts with oxygen to form silicon dioxide.
109359. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
109360. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
109361. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
109362. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
109363. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
109364. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
109365. Carbon combines with oxygen to form carbon dioxide.
109366. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
109367. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
109368. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109369. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
109370. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
109371. Magnesium reacts with oxygen in air to form magnesium oxide.
109372. Carbon reacts with oxygen to form carbon dioxide.
109373. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
109374. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
109375. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
109376. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
109377. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
109378. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
109379. Phosphorus combines with oxygen to form phosphorus pentoxide.
109380. Hydrogen burns in air to form water vapor and release heat.
109381. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
109382. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109383. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
109384. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
109385. Calcium reacts with oxygen in air to form calcium oxide.
109386. Sulfur reacts with oxygen to form sulfur dioxide.
109387. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
109388. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
109389. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
109390. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
109391. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
109392. On heating, hydrogen peroxide decomposes to form water and oxygen.
109393. Magnesium combines with oxygen to form magnesium oxide.
109394. Methane burns in air to form carbon dioxide and water vapor and release heat.
109395. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
109396. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109397. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
109398. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
109399. Aluminium reacts with oxygen in air to form aluminium oxide.
109400. Phosphorus reacts with oxygen to form phosphorus pentoxide.
109401. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.

109402. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
109403. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
109404. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
109405. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
109406. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
109407. Iron combines with sulfur to form iron sulfide.
109408. Ethane burns in air to form carbon dioxide and water vapor and release heat.
109409. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
109410. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109411. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
109412. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
109413. Zinc reacts with oxygen in air to form zinc oxide.
109414. Hydrogen reacts with oxygen to form water.
109415. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
109416. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
109417. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
109418. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
109419. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
109420. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
109421. Calcium Oxide combines with water to form calcium hydroxide.
109422. Propane burns in air to form carbon dioxide and water vapor and release heat.
109423. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
109424. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109425. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
109426. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
109427. Iron reacts with oxygen in air to form iron(III) oxide.
109428. Nitrogen reacts with oxygen to form nitrogen oxides.
109429. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
109430. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
109431. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
109432. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
109433. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
109434. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
109435. Hydrogen combines with oxygen to form water.
109436. Butane burns in air to form carbon dioxide and water vapor and release heat.
109437. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
109438. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109439. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
109440. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
109441. Copper reacts with oxygen in air to form copper(II) oxide.
109442. Silicon reacts with oxygen to form silicon dioxide.
109443. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
109444. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
109445. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
109446. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
109447. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
109448. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
109449. Nitrogen combines with hydrogen to form ammonia.
109450. Carbon Monoxide burns in air to form carbon dioxide and release heat.
109451. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
109452. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109453. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
109454. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
109455. Lead reacts with oxygen in air to form lead(II) oxide.
109456. Carbon reacts with oxygen to form carbon dioxide.
109457. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
109458. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
109459. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
109460. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
109461. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
109462. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
109463. Sulfur combines with oxygen to form sulfur dioxide.
109464. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
109465. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
109466. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109467. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
109468. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
109469. Magnesium reacts with oxygen in air to form magnesium oxide.
109470. Sulfur reacts with oxygen to form sulfur dioxide.
109471. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
109472. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
109473. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
109474. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
109475. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
109476. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
109477. Carbon combines with oxygen to form carbon dioxide.
109478. Hydrogen burns in air to form water vapor and release heat.
109479. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
109480. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109481. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
109482. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
109483. Calcium reacts with oxygen in air to form calcium oxide.
109484. Phosphorus reacts with oxygen to form phosphorus pentoxide.
109485. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
109486. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
109487. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
109488. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
109489. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
109490. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
109491. Phosphorus combines with oxygen to form phosphorus pentoxide.
109492. Methane burns in air to form carbon dioxide and water vapor and release heat.

109493. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
109494. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109495. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
109496. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
109497. Aluminium reacts with oxygen in air to form aluminium oxide.
109498. Hydrogen reacts with oxygen to form water.
109499. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
109500. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
109501. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
109502. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
109503. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
109504. On heating, hydrogen peroxide decomposes to form water and oxygen.
109505. Magnesium combines with oxygen to form magnesium oxide.
109506. Ethane burns in air to form carbon dioxide and water vapor and release heat.
109507. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
109508. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109509. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
109510. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
109511. Zinc reacts with oxygen in air to form zinc oxide.
109512. Nitrogen reacts with oxygen to form nitrogen oxides.
109513. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
109514. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
109515. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
109516. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
109517. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
109518. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
109519. Iron combines with sulfur to form iron sulfide.
109520. Propane burns in air to form carbon dioxide and water vapor and release heat.
109521. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
109522. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109523. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
109524. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
109525. Iron reacts with oxygen in air to form iron(III) oxide.
109526. Silicon reacts with oxygen to form silicon dioxide.
109527. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
109528. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
109529. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
109530. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
109531. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
109532. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
109533. Calcium Oxide combines with water to form calcium hydroxide.
109534. Butane burns in air to form carbon dioxide and water vapor and release heat.
109535. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
109536. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109537. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
109538. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
109539. Copper reacts with oxygen in air to form copper(II) oxide.
109540. Carbon reacts with oxygen to form carbon dioxide.
109541. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
109542. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
109543. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
109544. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
109545. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
109546. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
109547. Hydrogen combines with oxygen to form water.
109548. Carbon Monoxide burns in air to form carbon dioxide and release heat.
109549. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
109550. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109551. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
109552. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
109553. Lead reacts with oxygen in air to form lead(II) oxide.
109554. Sulfur reacts with oxygen to form sulfur dioxide.
109555. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
109556. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
109557. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
109558. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
109559. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
109560. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
109561. Nitrogen combines with hydrogen to form ammonia.
109562. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
109563. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
109564. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109565. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
109566. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
109567. Magnesium reacts with oxygen in air to form magnesium oxide.
109568. Phosphorus reacts with oxygen to form phosphorus pentoxide.
109569. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
109570. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
109571. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
109572. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
109573. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
109574. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
109575. Sulfur combines with oxygen to form sulfur dioxide.
109576. Hydrogen burns in air to form water vapor and release heat.
109577. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
109578. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109579. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
109580. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
109581. Calcium reacts with oxygen in air to form calcium oxide.
109582. Hydrogen reacts with oxygen to form water.
109583. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
109584. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.

109585. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.

109586. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.

109587. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.

109588. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.

109589. Carbon combines with oxygen to form carbon dioxide.

109590. Methane burns in air to form carbon dioxide and water vapor and release heat.

109591. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.

109592. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

109593. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.

109594. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

109595. Aluminium reacts with oxygen in air to form aluminium oxide.

109596. Nitrogen reacts with oxygen to form nitrogen oxides.

109597. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

109598. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

109599. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.

109600. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

109601. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

109602. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

109603. Phosphorus combines with oxygen to form phosphorus pentoxide.

109604. Ethane burns in air to form carbon dioxide and water vapor and release heat.

109605. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

109606. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

109607. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.

109608. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

109609. Zinc reacts with oxygen in air to form zinc oxide.

109610. Silicon reacts with oxygen to form silicon dioxide.

109611. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

109612. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.

109613. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

109614. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

109615. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

109616. On heating, hydrogen peroxide decomposes to form water and oxygen.

109617. Magnesium combines with oxygen to form magnesium oxide.

109618. Propane burns in air to form carbon dioxide and water vapor and release heat.

109619. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

109620. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

109621. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.

109622. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

109623. Iron reacts with oxygen in air to form iron(III) oxide.

109624. Carbon reacts with oxygen to form carbon dioxide.

109625. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

109626. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.

109627. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

109628. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

109629. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

109630. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

109631. Iron combines with sulfur to form iron sulfide.

109632. Butane burns in air to form carbon dioxide and water vapor and release heat.

109633. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

109634. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

109635. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.

109636. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

109637. Copper reacts with oxygen in air to form copper(II) oxide.

109638. Sulfur reacts with oxygen to form sulfur dioxide.

109639. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

109640. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.

109641. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.

109642. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

109643. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

109644. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

109645. Calcium Oxide combines with water to form calcium hydroxide.

109646. Carbon Monoxide burns in air to form carbon dioxide and release heat.

109647. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

109648. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

109649. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.

109650. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

109651. Lead reacts with oxygen in air to form lead(II) oxide.

109652. Phosphorus reacts with oxygen to form phosphorus pentoxide.

109653. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

109654. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

109655. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

109656. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

109657. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

109658. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

109659. Hydrogen combines with oxygen to form water.

109660. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

109661. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.

109662. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

109663. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.

109664. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

109665. Magnesium reacts with oxygen in air to form magnesium oxide.

109666. Hydrogen reacts with oxygen to form water.

109667. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.

109668. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

109669. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

109670. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

109671. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

109672. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

109673. Nitrogen combines with hydrogen to form ammonia.

109674. Hydrogen burns in air to form water vapor and release heat.

109675. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

109676. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109677. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
109678. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
109679. Calcium reacts with oxygen in air to form calcium oxide.
109680. Nitrogen reacts with oxygen to form nitrogen oxides.
109681. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
109682. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
109683. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
109684. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
109685. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
109686. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
109687. Sulfur combines with oxygen to form sulfur dioxide.
109688. Methane burns in air to form carbon dioxide and water vapor and release heat.
109689. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
109690. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109691. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
109692. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
109693. Aluminium reacts with oxygen in air to form aluminium oxide.
109694. Silicon reacts with oxygen to form silicon dioxide.
109695. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
109696. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
109697. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
109698. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
109699. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
109700. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
109701. Carbon combines with oxygen to form carbon dioxide.
109702. Ethane burns in air to form carbon dioxide and water vapor and release heat.
109703. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
109704. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109705. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
109706. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
109707. Zinc reacts with oxygen in air to form zinc oxide.
109708. Carbon reacts with oxygen to form carbon dioxide.
109709. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
109710. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
109711. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
109712. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
109713. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
109714. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
109715. Phosphorus combines with oxygen to form phosphorus pentoxide.
109716. Propane burns in air to form carbon dioxide and water vapor and release heat.
109717. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
109718. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109719. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
109720. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
109721. Iron reacts with oxygen in air to form iron(III) oxide.
109722. Sulfur reacts with oxygen to form sulfur dioxide.
109723. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
109724. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
109725. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
109726. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
109727. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
109728. On heating, hydrogen peroxide decomposes to form water and oxygen.
109729. Magnesium combines with oxygen to form magnesium oxide.
109730. Butane burns in air to form carbon dioxide and water vapor and release heat.
109731. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
109732. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109733. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
109734. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
109735. Copper reacts with oxygen in air to form copper(II) oxide.
109736. Phosphorus reacts with oxygen to form phosphorus pentoxide.
109737. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
109738. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
109739. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
109740. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
109741. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
109742. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
109743. Iron combines with sulfur to form iron sulfide.
109744. Carbon Monoxide burns in air to form carbon dioxide and release heat.
109745. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
109746. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109747. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
109748. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
109749. Lead reacts with oxygen in air to form lead(II) oxide.
109750. Hydrogen reacts with oxygen to form water.
109751. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
109752. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
109753. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
109754. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
109755. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
109756. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
109757. Calcium Oxide combines with water to form calcium hydroxide.
109758. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
109759. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
109760. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109761. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
109762. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
109763. Magnesium reacts with oxygen in air to form magnesium oxide.
109764. Nitrogen reacts with oxygen to form nitrogen oxides.
109765. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
109766. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

109767. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
109768. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
109769. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
109770. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
109771. Hydrogen combines with oxygen to form water.
109772. Hydrogen burns in air to form water vapor and release heat.
109773. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
109774. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109775. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
109776. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
109777. Calcium reacts with oxygen in air to form calcium oxide.
109778. Silicon reacts with oxygen to form silicon dioxide.
109779. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
109780. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
109781. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
109782. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
109783. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
109784. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
109785. Nitrogen combines with hydrogen to form ammonia.
109786. Methane burns in air to form carbon dioxide and water vapor and release heat.
109787. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
109788. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109789. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
109790. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
109791. Aluminium reacts with oxygen in air to form aluminium oxide.
109792. Carbon reacts with oxygen to form carbon dioxide.
109793. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
109794. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
109795. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
109796. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
109797. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
109798. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
109799. Sulfur combines with oxygen to form sulfur dioxide.
109800. Ethane burns in air to form carbon dioxide and water vapor and release heat.
109801. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
109802. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109803. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
109804. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
109805. Zinc reacts with oxygen in air to form zinc oxide.
109806. Sulfur reacts with oxygen to form sulfur dioxide.
109807. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
109808. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
109809. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
109810. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
109811. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
109812. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
109813. Carbon combines with oxygen to form carbon dioxide.
109814. Propane burns in air to form carbon dioxide and water vapor and release heat.
109815. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
109816. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109817. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
109818. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
109819. Iron reacts with oxygen in air to form iron(III) oxide.
109820. Phosphorus reacts with oxygen to form phosphorus pentoxide.
109821. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
109822. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
109823. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
109824. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
109825. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
109826. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
109827. Phosphorus combines with oxygen to form phosphorus pentoxide.
109828. Butane burns in air to form carbon dioxide and water vapor and release heat.
109829. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
109830. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109831. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
109832. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
109833. Copper reacts with oxygen in air to form copper(II) oxide.
109834. Hydrogen reacts with oxygen to form water.
109835. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
109836. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
109837. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
109838. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
109839. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
109840. On heating, hydrogen peroxide decomposes to form water and oxygen.
109841. Magnesium combines with oxygen to form magnesium oxide.
109842. Carbon Monoxide burns in air to form carbon dioxide and release heat.
109843. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
109844. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109845. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
109846. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
109847. Lead reacts with oxygen in air to form lead(II) oxide.
109848. Nitrogen reacts with oxygen to form nitrogen oxides.
109849. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
109850. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
109851. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
109852. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
109853. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
109854. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
109855. Iron combines with sulfur to form iron sulfide.
109856. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
109857. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
109858. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

109859. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
109860. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
109861. Magnesium reacts with oxygen in air to form magnesium oxide.
109862. Silicon reacts with oxygen to form silicon dioxide.
109863. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
109864. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
109865. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
109866. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
109867. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
109868. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
109869. Calcium Oxide combines with water to form calcium hydroxide.
109870. Hydrogen burns in air to form water vapor and release heat.
109871. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
109872. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109873. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
109874. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
109875. Calcium reacts with oxygen in air to form calcium oxide.
109876. Carbon reacts with oxygen to form carbon dioxide.
109877. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
109878. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
109879. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
109880. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
109881. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
109882. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
109883. Hydrogen combines with oxygen to form water.
109884. Methane burns in air to form carbon dioxide and water vapor and release heat.
109885. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
109886. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109887. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
109888. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
109889. Aluminium reacts with oxygen in air to form aluminium oxide.
109890. Sulfur reacts with oxygen to form sulfur dioxide.
109891. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
109892. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
109893. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
109894. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
109895. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
109896. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
109897. Nitrogen combines with hydrogen to form ammonia.
109898. Ethane burns in air to form carbon dioxide and water vapor and release heat.
109899. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
109900. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109901. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
109902. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
109903. Zinc reacts with oxygen in air to form zinc oxide.
109904. Phosphorus reacts with oxygen to form phosphorus pentoxide.
109905. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
109906. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
109907. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
109908. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
109909. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
109910. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
109911. Sulfur combines with oxygen to form sulfur dioxide.
109912. Propane burns in air to form carbon dioxide and water vapor and release heat.
109913. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
109914. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109915. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
109916. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
109917. Iron reacts with oxygen in air to form iron(III) oxide.
109918. Hydrogen reacts with oxygen to form water.
109919. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
109920. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
109921. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
109922. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
109923. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
109924. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
109925. Carbon combines with oxygen to form carbon dioxide.
109926. Butane burns in air to form carbon dioxide and water vapor and release heat.
109927. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
109928. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109929. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
109930. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
109931. Copper reacts with oxygen in air to form copper(II) oxide.
109932. Nitrogen reacts with oxygen to form nitrogen oxides.
109933. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
109934. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
109935. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
109936. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
109937. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
109938. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
109939. Phosphorus combines with oxygen to form phosphorus pentoxide.
109940. Carbon Monoxide burns in air to form carbon dioxide and release heat.
109941. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
109942. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109943. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
109944. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
109945. Lead reacts with oxygen in air to form lead(II) oxide.
109946. Silicon reacts with oxygen to form silicon dioxide.
109947. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
109948. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
109949. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
109950. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

109951. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
109952. On heating, hydrogen peroxide decomposes to form water and oxygen.
109953. Magnesium combines with oxygen to form magnesium oxide.
109954. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
109955. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
109956. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109957. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
109958. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
109959. Magnesium reacts with oxygen in air to form magnesium oxide.
109960. Carbon reacts with oxygen to form carbon dioxide.
109961. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
109962. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
109963. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
109964. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
109965. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
109966. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
109967. Iron combines with sulfur to form iron sulfide.
109968. Hydrogen burns in air to form water vapor and release heat.
109969. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
109970. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109971. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
109972. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
109973. Calcium reacts with oxygen in air to form calcium oxide.
109974. Sulfur reacts with oxygen to form sulfur dioxide.
109975. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
109976. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
109977. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
109978. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
109979. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
109980. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
109981. Calcium Oxide combines with water to form calcium hydroxide.
109982. Methane burns in air to form carbon dioxide and water vapor and release heat.
109983. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
109984. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109985. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
109986. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
109987. Aluminium reacts with oxygen in air to form aluminium oxide.
109988. Phosphorus reacts with oxygen to form phosphorus pentoxide.
109989. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
109990. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
109991. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
109992. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
109993. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
109994. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
109995. Hydrogen combines with oxygen to form water.
109996. Ethane burns in air to form carbon dioxide and water vapor and release heat.
109997. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
109998. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
109999. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
110000. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
110001. Zinc reacts with oxygen in air to form zinc oxide.
110002. Hydrogen reacts with oxygen to form water.
110003. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
110004. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
110005. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
110006. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
110007. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
110008. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
110009. Nitrogen combines with hydrogen to form ammonia.
110010. Propane burns in air to form carbon dioxide and water vapor and release heat.
110011. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
110012. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110013. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
110014. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
110015. Iron reacts with oxygen in air to form iron(III) oxide.
110016. Nitrogen reacts with oxygen to form nitrogen oxides.
110017. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
110018. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
110019. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
110020. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
110021. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
110022. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
110023. Sulfur combines with oxygen to form sulfur dioxide.
110024. Butane burns in air to form carbon dioxide and water vapor and release heat.
110025. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
110026. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110027. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
110028. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
110029. Copper reacts with oxygen in air to form copper(II) oxide.
110030. Silicon reacts with oxygen to form silicon dioxide.
110031. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
110032. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
110033. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
110034. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
110035. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
110036. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
110037. Carbon combines with oxygen to form carbon dioxide.
110038. Carbon Monoxide burns in air to form carbon dioxide and release heat.
110039. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
110040. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110041. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.

110042. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
110043. Lead reacts with oxygen in air to form lead(II) oxide.
110044. Carbon reacts with oxygen to form carbon dioxide.
110045. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
110046. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
110047. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
110048. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
110049. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
110050. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
110051. Phosphorus combines with oxygen to form phosphorus pentoxide.
110052. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
110053. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
110054. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110055. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
110056. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
110057. Magnesium reacts with oxygen in air to form magnesium oxide.
110058. Sulfur reacts with oxygen to form sulfur dioxide.
110059. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
110060. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
110061. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
110062. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
110063. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
110064. On heating, hydrogen peroxide decomposes to form water and oxygen.
110065. Magnesium combines with oxygen to form magnesium oxide.
110066. Hydrogen burns in air to form water vapor and release heat.
110067. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
110068. Copper(I) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110069. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
110070. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
110071. Calcium reacts with oxygen in air to form calcium oxide.
110072. Phosphorus reacts with oxygen to form phosphorus pentoxide.
110073. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
110074. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
110075. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
110076. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
110077. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
110078. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
110079. Iron combines with sulfur to form iron sulfide.
110080. Methane burns in air to form carbon dioxide and water vapor and release heat.
110081. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
110082. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110083. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
110084. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
110085. Aluminium reacts with oxygen in air to form aluminium oxide.
110086. Hydrogen reacts with oxygen to form water.
110087. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
110088. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
110089. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
110090. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
110091. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
110092. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
110093. Calcium Oxide combines with water to form calcium hydroxide.
110094. Ethane burns in air to form carbon dioxide and water vapor and release heat.
110095. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
110096. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110097. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
110098. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
110099. Zinc reacts with oxygen in air to form zinc oxide.
110100. Nitrogen reacts with oxygen to form nitrogen oxides.
110101. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
110102. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
110103. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
110104. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
110105. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
110106. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
110107. Hydrogen combines with oxygen to form water.
110108. Propane burns in air to form carbon dioxide and water vapor and release heat.
110109. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
110110. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110111. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
110112. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
110113. Iron reacts with oxygen in air to form iron(III) oxide.
110114. Silicon reacts with oxygen to form silicon dioxide.
110115. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
110116. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
110117. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
110118. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
110119. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
110120. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
110121. Nitrogen combines with hydrogen to form ammonia.
110122. Butane burns in air to form carbon dioxide and water vapor and release heat.
110123. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
110124. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110125. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
110126. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
110127. Copper reacts with oxygen in air to form copper(II) oxide.
110128. Carbon reacts with oxygen to form carbon dioxide.
110129. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
110130. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
110131. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
110132. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
110133. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

110134. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
110135. Sulfur combines with oxygen to form sulfur dioxide.
110136. Carbon Monoxide burns in air to form carbon dioxide and release heat.
110137. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
110138. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110139. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
110140. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
110141. Lead reacts with oxygen in air to form lead(II) oxide.
110142. Sulfur reacts with oxygen to form sulfur dioxide.
110143. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
110144. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
110145. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
110146. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
110147. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
110148. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
110149. Carbon combines with oxygen to form carbon dioxide.
110150. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
110151. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
110152. Copper(I) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110153. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
110154. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
110155. Magnesium reacts with oxygen in air to form magnesium oxide.
110156. Phosphorus reacts with oxygen to form phosphorus pentoxide.
110157. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
110158. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
110159. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
110160. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
110161. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
110162. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
110163. Phosphorus combines with oxygen to form phosphorus pentoxide.
110164. Hydrogen burns in air to form water vapor and release heat.
110165. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
110166. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110167. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
110168. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
110169. Calcium reacts with oxygen in air to form calcium oxide.
110170. Hydrogen reacts with oxygen to form water.
110171. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
110172. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
110173. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
110174. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
110175. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
110176. On heating, hydrogen peroxide decomposes to form water and oxygen.
110177. Magnesium combines with oxygen to form magnesium oxide.
110178. Methane burns in air to form carbon dioxide and water vapor and release heat.
110179. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
110180. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110181. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
110182. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
110183. Aluminium reacts with oxygen in air to form aluminium oxide.
110184. Nitrogen reacts with oxygen to form nitrogen oxides.
110185. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
110186. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
110187. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
110188. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
110189. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
110190. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
110191. Iron combines with sulfur to form iron sulfide.
110192. Ethane burns in air to form carbon dioxide and water vapor and release heat.
110193. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
110194. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110195. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
110196. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
110197. Zinc reacts with oxygen in air to form zinc oxide.
110198. Silicon reacts with oxygen to form silicon dioxide.
110199. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
110200. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
110201. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
110202. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
110203. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
110204. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
110205. Calcium Oxide combines with water to form calcium hydroxide.
110206. Propane burns in air to form carbon dioxide and water vapor and release heat.
110207. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
110208. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110209. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
110210. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
110211. Iron reacts with oxygen in air to form iron(III) oxide.
110212. Carbon reacts with oxygen to form carbon dioxide.
110213. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
110214. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
110215. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
110216. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
110217. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
110218. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
110219. Hydrogen combines with oxygen to form water.
110220. Butane burns in air to form carbon dioxide and water vapor and release heat.
110221. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
110222. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110223. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
110224. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
110225. Copper reacts with oxygen in air to form copper(II) oxide.
110226. Sulfur reacts with oxygen to form sulfur dioxide.

110227. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
110228. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
110229. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
110230. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
110231. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
110232. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
110233. Nitrogen combines with hydrogen to form ammonia.
110234. Carbon Monoxide burns in air to form carbon dioxide and release heat.
110235. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
110236. Copper(I) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110237. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
110238. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
110239. Lead reacts with oxygen in air to form lead(II) oxide.
110240. Phosphorus reacts with oxygen to form phosphorus pentoxide.
110241. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
110242. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
110243. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
110244. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
110245. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
110246. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
110247. Sulfur combines with oxygen to form sulfur dioxide.
110248. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
110249. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
110250. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110251. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
110252. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
110253. Magnesium reacts with oxygen in air to form magnesium oxide.
110254. Hydrogen reacts with oxygen to form water.
110255. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
110256. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
110257. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
110258. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
110259. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
110260. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
110261. Carbon combines with oxygen to form carbon dioxide.
110262. Hydrogen burns in air to form water vapor and release heat.
110263. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
110264. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110265. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
110266. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
110267. Calcium reacts with oxygen in air to form calcium oxide.
110268. Nitrogen reacts with oxygen to form nitrogen oxides.
110269. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
110270. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
110271. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
110272. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
110273. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
110274. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
110275. Phosphorus combines with oxygen to form phosphorus pentoxide.
110276. Methane burns in air to form carbon dioxide and water vapor and release heat.
110277. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
110278. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110279. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
110280. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
110281. Aluminium reacts with oxygen in air to form aluminium oxide.
110282. Silicon reacts with oxygen to form silicon dioxide.
110283. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
110284. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
110285. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
110286. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
110287. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
110288. On heating, hydrogen peroxide decomposes to form water and oxygen.
110289. Magnesium combines with oxygen to form magnesium oxide.
110290. Ethane burns in air to form carbon dioxide and water vapor and release heat.
110291. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
110292. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110293. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
110294. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
110295. Zinc reacts with oxygen in air to form zinc oxide.
110296. Carbon reacts with oxygen to form carbon dioxide.
110297. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
110298. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
110299. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
110300. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
110301. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
110302. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
110303. Iron combines with sulfur to form iron sulfide.
110304. Propane burns in air to form carbon dioxide and water vapor and release heat.
110305. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
110306. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110307. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
110308. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
110309. Iron reacts with oxygen in air to form iron(III) oxide.
110310. Sulfur reacts with oxygen to form sulfur dioxide.
110311. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
110312. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
110313. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
110314. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
110315. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
110316. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
110317. Calcium Oxide combines with water to form calcium hydroxide.

110318. Butane burns in air to form carbon dioxide and water vapor and release heat.
110319. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
110320. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110321. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
110322. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
110323. Copper reacts with oxygen in air to form copper(II) oxide.
110324. Phosphorus reacts with oxygen to form phosphorus pentoxide.
110325. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
110326. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
110327. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
110328. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
110329. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
110330. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
110331. Hydrogen combines with oxygen to form water.
110332. Carbon Monoxide burns in air to form carbon dioxide and release heat.
110333. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
110334. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110335. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
110336. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
110337. Lead reacts with oxygen in air to form lead(II) oxide.
110338. Hydrogen reacts with oxygen to form water.
110339. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
110340. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
110341. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
110342. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
110343. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
110344. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
110345. Nitrogen combines with hydrogen to form ammonia.
110346. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
110347. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
110348. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110349. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
110350. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
110351. Magnesium reacts with oxygen in air to form magnesium oxide.
110352. Nitrogen reacts with oxygen to form nitrogen oxides.
110353. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
110354. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
110355. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
110356. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
110357. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
110358. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
110359. Sulfur combines with oxygen to form sulfur dioxide.
110360. Hydrogen burns in air to form water vapor and release heat.
110361. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
110362. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110363. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
110364. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
110365. Calcium reacts with oxygen in air to form calcium oxide.
110366. Silicon reacts with oxygen to form silicon dioxide.
110367. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
110368. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
110369. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
110370. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
110371. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
110372. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
110373. Carbon combines with oxygen to form carbon dioxide.
110374. Methane burns in air to form carbon dioxide and water vapor and release heat.
110375. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
110376. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110377. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
110378. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
110379. Aluminium reacts with oxygen in air to form aluminium oxide.
110380. Carbon reacts with oxygen to form carbon dioxide.
110381. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
110382. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
110383. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
110384. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
110385. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
110386. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
110387. Phosphorus combines with oxygen to form phosphorus pentoxide.
110388. Ethane burns in air to form carbon dioxide and water vapor and release heat.
110389. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
110390. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110391. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
110392. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
110393. Zinc reacts with oxygen in air to form zinc oxide.
110394. Sulfur reacts with oxygen to form sulfur dioxide.
110395. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
110396. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
110397. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
110398. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
110399. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
110400. On heating, hydrogen peroxide decomposes to form water and oxygen.
110401. Magnesium combines with oxygen to form magnesium oxide.
110402. Propane burns in air to form carbon dioxide and water vapor and release heat.
110403. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
110404. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110405. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
110406. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
110407. Iron reacts with oxygen in air to form iron(III) oxide.
110408. Phosphorus reacts with oxygen to form phosphorus pentoxide.

110409. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
110410. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
110411. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
110412. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
110413. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
110414. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
110415. Iron combines with sulfur to form iron sulfide.
110416. Butane burns in air to form carbon dioxide and water vapor and release heat.
110417. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
110418. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110419. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
110420. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
110421. Copper reacts with oxygen in air to form copper(II) oxide.
110422. Hydrogen reacts with oxygen to form water.
110423. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
110424. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
110425. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
110426. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
110427. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
110428. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
110429. Calcium Oxide combines with water to form calcium hydroxide.
110430. Carbon Monoxide burns in air to form carbon dioxide and release heat.
110431. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
110432. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110433. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
110434. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
110435. Lead reacts with oxygen in air to form lead(II) oxide.
110436. Nitrogen reacts with oxygen to form nitrogen oxides.
110437. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
110438. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
110439. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
110440. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
110441. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
110442. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
110443. Hydrogen combines with oxygen to form water.
110444. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
110445. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
110446. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110447. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
110448. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
110449. Magnesium reacts with oxygen in air to form magnesium oxide.
110450. Silicon reacts with oxygen to form silicon dioxide.
110451. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
110452. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
110453. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
110454. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
110455. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
110456. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
110457. Nitrogen combines with hydrogen to form ammonia.
110458. Hydrogen burns in air to form water vapor and release heat.
110459. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
110460. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110461. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
110462. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
110463. Calcium reacts with oxygen in air to form calcium oxide.
110464. Carbon reacts with oxygen to form carbon dioxide.
110465. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
110466. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
110467. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
110468. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
110469. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
110470. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
110471. Sulfur combines with oxygen to form sulfur dioxide.
110472. Methane burns in air to form carbon dioxide and water vapor and release heat.
110473. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
110474. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110475. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
110476. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
110477. Aluminium reacts with oxygen in air to form aluminium oxide.
110478. Sulfur reacts with oxygen to form sulfur dioxide.
110479. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
110480. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
110481. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
110482. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
110483. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
110484. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
110485. Carbon combines with oxygen to form carbon dioxide.
110486. Ethane burns in air to form carbon dioxide and water vapor and release heat.
110487. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
110488. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110489. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
110490. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
110491. Zinc reacts with oxygen in air to form zinc oxide.
110492. Phosphorus reacts with oxygen to form phosphorus pentoxide.
110493. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
110494. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
110495. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
110496. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
110497. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
110498. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
110499. Phosphorus combines with oxygen to form phosphorus pentoxide.

110500. Propane burns in air to form carbon dioxide and water vapor and release heat.
110501. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
110502. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110503. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
110504. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
110505. Iron reacts with oxygen in air to form iron(III) oxide.
110506. Hydrogen reacts with oxygen to form water.
110507. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
110508. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
110509. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
110510. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
110511. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
110512. On heating, hydrogen peroxide decomposes to form water and oxygen.
110513. Magnesium combines with oxygen to form magnesium oxide.
110514. Butane burns in air to form carbon dioxide and water vapor and release heat.
110515. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
110516. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110517. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
110518. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
110519. Copper reacts with oxygen in air to form copper(II) oxide.
110520. Nitrogen reacts with oxygen to form nitrogen oxides.
110521. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
110522. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
110523. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
110524. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
110525. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
110526. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
110527. Iron combines with sulfur to form iron sulfide.
110528. Carbon Monoxide burns in air to form carbon dioxide and release heat.
110529. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
110530. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110531. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
110532. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
110533. Lead reacts with oxygen in air to form lead(II) oxide.
110534. Silicon reacts with oxygen to form silicon dioxide.
110535. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
110536. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
110537. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
110538. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
110539. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
110540. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
110541. Calcium Oxide combines with water to form calcium hydroxide.
110542. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
110543. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
110544. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110545. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
110546. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
110547. Magnesium reacts with oxygen in air to form magnesium oxide.
110548. Carbon reacts with oxygen to form carbon dioxide.
110549. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
110550. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
110551. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
110552. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
110553. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
110554. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
110555. Hydrogen combines with oxygen to form water.
110556. Hydrogen burns in air to form water vapor and release heat.
110557. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
110558. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110559. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
110560. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
110561. Calcium reacts with oxygen in air to form calcium oxide.
110562. Sulfur reacts with oxygen to form sulfur dioxide.
110563. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
110564. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
110565. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
110566. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
110567. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
110568. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
110569. Nitrogen combines with hydrogen to form ammonia.
110570. Methane burns in air to form carbon dioxide and water vapor and release heat.
110571. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
110572. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110573. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
110574. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
110575. Aluminium reacts with oxygen in air to form aluminium oxide.
110576. Phosphorus reacts with oxygen to form phosphorus pentoxide.
110577. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
110578. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
110579. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
110580. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
110581. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
110582. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
110583. Sulfur combines with oxygen to form sulfur dioxide.
110584. Ethane burns in air to form carbon dioxide and water vapor and release heat.
110585. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
110586. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110587. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
110588. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
110589. Zinc reacts with oxygen in air to form zinc oxide.
110590. Hydrogen reacts with oxygen to form water.
110591. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

110592. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
110593. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
110594. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
110595. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
110596. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
110597. Carbon combines with oxygen to form carbon dioxide.
110598. Propane burns in air to form carbon dioxide and water vapor and release heat.
110599. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
110600. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110601. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
110602. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
110603. Iron reacts with oxygen in air to form iron(III) oxide.
110604. Nitrogen reacts with oxygen to form nitrogen oxides.
110605. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
110606. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
110607. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
110608. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
110609. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
110610. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
110611. Phosphorus combines with oxygen to form phosphorus pentoxide.
110612. Butane burns in air to form carbon dioxide and water vapor and release heat.
110613. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
110614. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110615. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
110616. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
110617. Copper reacts with oxygen in air to form copper(II) oxide.
110618. Silicon reacts with oxygen to form silicon dioxide.
110619. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
110620. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
110621. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
110622. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
110623. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
110624. On heating, hydrogen peroxide decomposes to form water and oxygen.
110625. Magnesium combines with oxygen to form magnesium oxide.
110626. Carbon Monoxide burns in air to form carbon dioxide and release heat.
110627. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
110628. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110629. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
110630. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
110631. Lead reacts with oxygen in air to form lead(II) oxide.
110632. Carbon reacts with oxygen to form carbon dioxide.
110633. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
110634. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
110635. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
110636. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
110637. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
110638. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
110639. Iron combines with sulfur to form iron sulfide.
110640. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
110641. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
110642. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110643. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
110644. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
110645. Magnesium reacts with oxygen in air to form magnesium oxide.
110646. Sulfur reacts with oxygen to form sulfur dioxide.
110647. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
110648. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
110649. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
110650. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
110651. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
110652. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
110653. Calcium Oxide combines with water to form calcium hydroxide.
110654. Hydrogen burns in air to form water vapor and release heat.
110655. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
110656. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110657. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
110658. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
110659. Calcium reacts with oxygen in air to form calcium oxide.
110660. Phosphorus reacts with oxygen to form phosphorus pentoxide.
110661. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
110662. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
110663. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
110664. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
110665. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
110666. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
110667. Hydrogen combines with oxygen to form water.
110668. Methane burns in air to form carbon dioxide and water vapor and release heat.
110669. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
110670. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110671. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
110672. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
110673. Aluminium reacts with oxygen in air to form aluminium oxide.
110674. Hydrogen reacts with oxygen to form water.
110675. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
110676. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
110677. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
110678. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
110679. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
110680. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
110681. Nitrogen combines with hydrogen to form ammonia.
110682. Ethane burns in air to form carbon dioxide and water vapor and release heat.

110683. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
110684. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110685. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
110686. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
110687. Zinc reacts with oxygen in air to form zinc oxide.
110688. Nitrogen reacts with oxygen to form nitrogen oxides.
110689. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
110690. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
110691. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
110692. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
110693. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
110694. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
110695. Sulfur combines with oxygen to form sulfur dioxide.
110696. Propane burns in air to form carbon dioxide and water vapor and release heat.
110697. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
110698. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110699. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
110700. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
110701. Iron reacts with oxygen in air to form iron(III) oxide.
110702. Silicon reacts with oxygen to form silicon dioxide.
110703. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
110704. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
110705. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
110706. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
110707. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
110708. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
110709. Carbon combines with oxygen to form carbon dioxide.
110710. Butane burns in air to form carbon dioxide and water vapor and release heat.
110711. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
110712. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110713. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
110714. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
110715. Copper reacts with oxygen in air to form copper(II) oxide.
110716. Carbon reacts with oxygen to form carbon dioxide.
110717. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
110718. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
110719. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
110720. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
110721. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
110722. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
110723. Phosphorus combines with oxygen to form phosphorus pentoxide.
110724. Carbon Monoxide burns in air to form carbon dioxide and release heat.
110725. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
110726. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110727. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
110728. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
110729. Lead reacts with oxygen in air to form lead(II) oxide.
110730. Sulfur reacts with oxygen to form sulfur dioxide.
110731. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
110732. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
110733. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
110734. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
110735. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
110736. On heating, hydrogen peroxide decomposes to form water and oxygen.
110737. Magnesium combines with oxygen to form magnesium oxide.
110738. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
110739. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
110740. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110741. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
110742. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
110743. Magnesium reacts with oxygen in air to form magnesium oxide.
110744. Phosphorus reacts with oxygen to form phosphorus pentoxide.
110745. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
110746. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
110747. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
110748. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
110749. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
110750. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
110751. Iron combines with sulfur to form iron sulfide.
110752. Hydrogen burns in air to form water vapor and release heat.
110753. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
110754. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110755. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
110756. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
110757. Calcium reacts with oxygen in air to form calcium oxide.
110758. Hydrogen reacts with oxygen to form water.
110759. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
110760. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
110761. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
110762. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
110763. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
110764. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
110765. Calcium Oxide combines with water to form calcium hydroxide.
110766. Methane burns in air to form carbon dioxide and water vapor and release heat.
110767. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
110768. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110769. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
110770. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
110771. Aluminium reacts with oxygen in air to form aluminium oxide.
110772. Nitrogen reacts with oxygen to form nitrogen oxides.
110773. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
110774. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.

110775. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
110776. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
110777. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
110778. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
110779. Hydrogen combines with oxygen to form water.
110780. Ethane burns in air to form carbon dioxide and water vapor and release heat.
110781. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
110782. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110783. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
110784. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
110785. Zinc reacts with oxygen in air to form zinc oxide.
110786. Silicon reacts with oxygen to form silicon dioxide.
110787. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
110788. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
110789. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
110790. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
110791. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
110792. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
110793. Nitrogen combines with hydrogen to form ammonia.
110794. Propane burns in air to form carbon dioxide and water vapor and release heat.
110795. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
110796. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110797. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
110798. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
110799. Iron reacts with oxygen in air to form iron(III) oxide.
110800. Carbon reacts with oxygen to form carbon dioxide.
110801. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
110802. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
110803. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
110804. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
110805. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
110806. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
110807. Sulfur combines with oxygen to form sulfur dioxide.
110808. Butane burns in air to form carbon dioxide and water vapor and release heat.
110809. Copper(I) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
110810. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110811. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
110812. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
110813. Copper reacts with oxygen in air to form copper(II) oxide.
110814. Sulfur reacts with oxygen to form sulfur dioxide.
110815. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
110816. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
110817. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
110818. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
110819. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
110820. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
110821. Carbon combines with oxygen to form carbon dioxide.
110822. Carbon Monoxide burns in air to form carbon dioxide and release heat.
110823. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
110824. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110825. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
110826. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
110827. Lead reacts with oxygen in air to form lead(II) oxide.
110828. Phosphorus reacts with oxygen to form phosphorus pentoxide.
110829. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
110830. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
110831. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
110832. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
110833. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
110834. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
110835. Phosphorus combines with oxygen to form phosphorus pentoxide.
110836. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
110837. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
110838. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110839. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
110840. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
110841. Magnesium reacts with oxygen in air to form magnesium oxide.
110842. Hydrogen reacts with oxygen to form water.
110843. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
110844. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
110845. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
110846. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
110847. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
110848. On heating, hydrogen peroxide decomposes to form water and oxygen.
110849. Magnesium combines with oxygen to form magnesium oxide.
110850. Hydrogen burns in air to form water vapor and release heat.
110851. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
110852. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110853. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
110854. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
110855. Calcium reacts with oxygen in air to form calcium oxide.
110856. Nitrogen reacts with oxygen to form nitrogen oxides.
110857. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
110858. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
110859. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
110860. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
110861. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
110862. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
110863. Iron combines with sulfur to form iron sulfide.
110864. Methane burns in air to form carbon dioxide and water vapor and release heat.
110865. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.

110866. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110867. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
110868. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
110869. Aluminium reacts with oxygen in air to form aluminium oxide.
110870. Silicon reacts with oxygen to form silicon dioxide.
110871. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
110872. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
110873. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
110874. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
110875. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
110876. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
110877. Calcium Oxide combines with water to form calcium hydroxide.
110878. Ethane burns in air to form carbon dioxide and water vapor and release heat.
110879. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
110880. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110881. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
110882. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
110883. Zinc reacts with oxygen in air to form zinc oxide.
110884. Carbon reacts with oxygen to form carbon dioxide.
110885. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
110886. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
110887. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
110888. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
110889. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
110890. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
110891. Hydrogen combines with oxygen to form water.
110892. Propane burns in air to form carbon dioxide and water vapor and release heat.
110893. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
110894. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110895. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
110896. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
110897. Iron reacts with oxygen in air to form iron(III) oxide.
110898. Sulfur reacts with oxygen to form sulfur dioxide.
110899. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
110900. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
110901. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
110902. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
110903. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
110904. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
110905. Nitrogen combines with hydrogen to form ammonia.
110906. Butane burns in air to form carbon dioxide and water vapor and release heat.
110907. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
110908. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110909. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
110910. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
110911. Copper reacts with oxygen in air to form copper(II) oxide.
110912. Phosphorus reacts with oxygen to form phosphorus pentoxide.
110913. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
110914. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
110915. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
110916. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
110917. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
110918. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
110919. Sulfur combines with oxygen to form sulfur dioxide.
110920. Carbon Monoxide burns in air to form carbon dioxide and release heat.
110921. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
110922. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110923. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
110924. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
110925. Lead reacts with oxygen in air to form lead(II) oxide.
110926. Hydrogen reacts with oxygen to form water.
110927. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
110928. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
110929. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
110930. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
110931. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
110932. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
110933. Carbon combines with oxygen to form carbon dioxide.
110934. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
110935. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
110936. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110937. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
110938. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
110939. Magnesium reacts with oxygen in air to form magnesium oxide.
110940. Nitrogen reacts with oxygen to form nitrogen oxides.
110941. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
110942. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
110943. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
110944. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
110945. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
110946. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
110947. Phosphorus combines with oxygen to form phosphorus pentoxide.
110948. Hydrogen burns in air to form water vapor and release heat.
110949. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
110950. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110951. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
110952. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
110953. Calcium reacts with oxygen in air to form calcium oxide.
110954. Silicon reacts with oxygen to form silicon dioxide.
110955. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
110956. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
110957. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.

110958. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
110959. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
110960. On heating, hydrogen peroxide decomposes to form water and oxygen.
110961. Magnesium combines with oxygen to form magnesium oxide.
110962. Methane burns in air to form carbon dioxide and water vapor and release heat.
110963. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
110964. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110965. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
110966. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
110967. Aluminium reacts with oxygen in air to form aluminium oxide.
110968. Carbon reacts with oxygen to form carbon dioxide.
110969. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
110970. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
110971. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
110972. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
110973. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
110974. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
110975. Iron combines with sulfur to form iron sulfide.
110976. Ethane burns in air to form carbon dioxide and water vapor and release heat.
110977. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
110978. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110979. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
110980. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
110981. Zinc reacts with oxygen in air to form zinc oxide.
110982. Sulfur reacts with oxygen to form sulfur dioxide.
110983. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
110984. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
110985. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
110986. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
110987. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
110988. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
110989. Calcium Oxide combines with water to form calcium hydroxide.
110990. Propane burns in air to form carbon dioxide and water vapor and release heat.
110991. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
110992. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
110993. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
110994. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
110995. Iron reacts with oxygen in air to form iron(III) oxide.
110996. Phosphorus reacts with oxygen to form phosphorus pentoxide.
110997. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
110998. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
110999. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
111000. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
111001. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
111002. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
111003. Hydrogen combines with oxygen to form water.
111004. Butane burns in air to form carbon dioxide and water vapor and release heat.
111005. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
111006. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111007. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
111008. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
111009. Copper reacts with oxygen in air to form copper(II) oxide.
111010. Hydrogen reacts with oxygen to form water.
111011. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
111012. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
111013. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
111014. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
111015. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
111016. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
111017. Nitrogen combines with hydrogen to form ammonia.
111018. Carbon Monoxide burns in air to form carbon dioxide and release heat.
111019. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
111020. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111021. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
111022. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
111023. Lead reacts with oxygen in air to form lead(II) oxide.
111024. Nitrogen reacts with oxygen to form nitrogen oxides.
111025. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
111026. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
111027. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
111028. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
111029. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
111030. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
111031. Sulfur combines with oxygen to form sulfur dioxide.
111032. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
111033. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
111034. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111035. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
111036. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
111037. Magnesium reacts with oxygen in air to form magnesium oxide.
111038. Silicon reacts with oxygen to form silicon dioxide.
111039. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
111040. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
111041. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
111042. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
111043. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
111044. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
111045. Carbon combines with oxygen to form carbon dioxide.
111046. Hydrogen burns in air to form water vapor and release heat.
111047. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
111048. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

111049. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
111050. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
111051. Calcium reacts with oxygen in air to form calcium oxide.
111052. Carbon reacts with oxygen to form carbon dioxide.
111053. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
111054. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
111055. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
111056. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
111057. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
111058. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
111059. Phosphorus combines with oxygen to form phosphorus pentoxide.
111060. Methane burns in air to form carbon dioxide and water vapor and release heat.
111061. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
111062. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111063. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
111064. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
111065. Aluminium reacts with oxygen in air to form aluminium oxide.
111066. Sulfur reacts with oxygen to form sulfur dioxide.
111067. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
111068. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
111069. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
111070. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
111071. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
111072. On heating, hydrogen peroxide decomposes to form water and oxygen.
111073. Magnesium combines with oxygen to form magnesium oxide.
111074. Ethane burns in air to form carbon dioxide and water vapor and release heat.
111075. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
111076. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111077. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
111078. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
111079. Zinc reacts with oxygen in air to form zinc oxide.
111080. Phosphorus reacts with oxygen to form phosphorus pentoxide.
111081. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
111082. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
111083. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
111084. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
111085. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
111086. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
111087. Iron combines with sulfur to form iron sulfide.
111088. Propane burns in air to form carbon dioxide and water vapor and release heat.
111089. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
111090. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111091. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
111092. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
111093. Iron reacts with oxygen in air to form iron(III) oxide.
111094. Hydrogen reacts with oxygen to form water.
111095. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
111096. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
111097. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
111098. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
111099. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
111100. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
111101. Calcium Oxide combines with water to form calcium hydroxide.
111102. Butane burns in air to form carbon dioxide and water vapor and release heat.
111103. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
111104. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111105. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
111106. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
111107. Copper reacts with oxygen in air to form copper(II) oxide.
111108. Nitrogen reacts with oxygen to form nitrogen oxides.
111109. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
111110. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
111111. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
111112. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
111113. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
111114. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
111115. Hydrogen combines with oxygen to form water.
111116. Carbon Monoxide burns in air to form carbon dioxide and release heat.
111117. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
111118. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111119. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
111120. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
111121. Lead reacts with oxygen in air to form lead(II) oxide.
111122. Silicon reacts with oxygen to form silicon dioxide.
111123. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
111124. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
111125. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
111126. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
111127. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
111128. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
111129. Nitrogen combines with hydrogen to form ammonia.
111130. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
111131. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
111132. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111133. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
111134. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
111135. Magnesium reacts with oxygen in air to form magnesium oxide.
111136. Carbon reacts with oxygen to form carbon dioxide.
111137. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
111138. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
111139. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.

111140. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
111141. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
111142. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
111143. Sulfur combines with oxygen to form sulfur dioxide.
111144. Hydrogen burns in air to form water vapor and release heat.
111145. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
111146. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111147. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
111148. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
111149. Calcium reacts with oxygen in air to form calcium oxide.
111150. Sulfur reacts with oxygen to form sulfur dioxide.
111151. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
111152. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
111153. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
111154. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
111155. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
111156. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
111157. Carbon combines with oxygen to form carbon dioxide.
111158. Methane burns in air to form carbon dioxide and water vapor and release heat.
111159. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
111160. Copper(I) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111161. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
111162. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
111163. Aluminium reacts with oxygen in air to form aluminium oxide.
111164. Phosphorus reacts with oxygen to form phosphorus pentoxide.
111165. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
111166. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
111167. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
111168. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
111169. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
111170. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
111171. Phosphorus combines with oxygen to form phosphorus pentoxide.
111172. Ethane burns in air to form carbon dioxide and water vapor and release heat.
111173. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
111174. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111175. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
111176. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
111177. Zinc reacts with oxygen in air to form zinc oxide.
111178. Hydrogen reacts with oxygen to form water.
111179. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
111180. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
111181. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
111182. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
111183. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
111184. On heating, hydrogen peroxide decomposes to form water and oxygen.
111185. Magnesium combines with oxygen to form magnesium oxide.
111186. Propane burns in air to form carbon dioxide and water vapor and release heat.
111187. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
111188. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111189. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
111190. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
111191. Iron reacts with oxygen in air to form iron(III) oxide.
111192. Nitrogen reacts with oxygen to form nitrogen oxides.
111193. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
111194. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
111195. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
111196. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
111197. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
111198. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
111199. Iron combines with sulfur to form iron sulfide.
111200. Butane burns in air to form carbon dioxide and water vapor and release heat.
111201. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
111202. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111203. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
111204. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
111205. Copper reacts with oxygen in air to form copper(II) oxide.
111206. Silicon reacts with oxygen to form silicon dioxide.
111207. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
111208. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
111209. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
111210. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
111211. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
111212. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
111213. Calcium Oxide combines with water to form calcium hydroxide.
111214. Carbon Monoxide burns in air to form carbon dioxide and release heat.
111215. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
111216. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111217. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
111218. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
111219. Lead reacts with oxygen in air to form lead(II) oxide.
111220. Carbon reacts with oxygen to form carbon dioxide.
111221. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
111222. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
111223. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
111224. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
111225. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
111226. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
111227. Hydrogen combines with oxygen to form water.
111228. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
111229. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
111230. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111231. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.

111232. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
111233. Magnesium reacts with oxygen in air to form magnesium oxide.
111234. Sulfur reacts with oxygen to form sulfur dioxide.
111235. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
111236. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
111237. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
111238. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
111239. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
111240. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
111241. Nitrogen combines with hydrogen to form ammonia.
111242. Hydrogen burns in air to form water vapor and release heat.
111243. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
111244. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111245. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
111246. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
111247. Calcium reacts with oxygen in air to form calcium oxide.
111248. Phosphorus reacts with oxygen to form phosphorus pentoxide.
111249. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
111250. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
111251. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
111252. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
111253. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
111254. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
111255. Sulfur combines with oxygen to form sulfur dioxide.
111256. Methane burns in air to form carbon dioxide and water vapor and release heat.
111257. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
111258. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111259. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
111260. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
111261. Aluminium reacts with oxygen in air to form aluminium oxide.
111262. Hydrogen reacts with oxygen to form water.
111263. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
111264. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
111265. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
111266. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
111267. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
111268. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
111269. Carbon combines with oxygen to form carbon dioxide.
111270. Ethane burns in air to form carbon dioxide and water vapor and release heat.
111271. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
111272. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111273. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
111274. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
111275. Zinc reacts with oxygen in air to form zinc oxide.
111276. Nitrogen reacts with oxygen to form nitrogen oxides.
111277. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
111278. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
111279. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
111280. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
111281. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
111282. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
111283. Phosphorus combines with oxygen to form phosphorus pentoxide.
111284. Propane burns in air to form carbon dioxide and water vapor and release heat.
111285. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
111286. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111287. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
111288. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
111289. Iron reacts with oxygen in air to form iron(III) oxide.
111290. Silicon reacts with oxygen to form silicon dioxide.
111291. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
111292. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
111293. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
111294. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
111295. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
111296. On heating, hydrogen peroxide decomposes to form water and oxygen.
111297. Magnesium combines with oxygen to form magnesium oxide.
111298. Butane burns in air to form carbon dioxide and water vapor and release heat.
111299. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
111300. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111301. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
111302. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
111303. Copper reacts with oxygen in air to form copper(II) oxide.
111304. Carbon reacts with oxygen to form carbon dioxide.
111305. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
111306. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
111307. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
111308. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
111309. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
111310. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
111311. Iron combines with sulfur to form iron sulfide.
111312. Carbon Monoxide burns in air to form carbon dioxide and release heat.
111313. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
111314. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111315. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
111316. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
111317. Lead reacts with oxygen in air to form lead(II) oxide.
111318. Sulfur reacts with oxygen to form sulfur dioxide.
111319. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
111320. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
111321. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
111322. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

111323. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
111324. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
111325. Calcium Oxide combines with water to form calcium hydroxide.
111326. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
111327. Copper(I) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
111328. Copper(I) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111329. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
111330. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
111331. Magnesium reacts with oxygen in air to form magnesium oxide.
111332. Phosphorus reacts with oxygen to form phosphorus pentoxide.
111333. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
111334. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
111335. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
111336. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
111337. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
111338. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
111339. Hydrogen combines with oxygen to form water.
111340. Hydrogen burns in air to form water vapor and release heat.
111341. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
111342. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111343. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
111344. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
111345. Calcium reacts with oxygen in air to form calcium oxide.
111346. Hydrogen reacts with oxygen to form water.
111347. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
111348. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
111349. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
111350. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
111351. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
111352. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
111353. Nitrogen combines with hydrogen to form ammonia.
111354. Methane burns in air to form carbon dioxide and water vapor and release heat.
111355. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
111356. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111357. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
111358. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
111359. Aluminium reacts with oxygen in air to form aluminium oxide.
111360. Nitrogen reacts with oxygen to form nitrogen oxides.
111361. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
111362. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
111363. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
111364. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
111365. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
111366. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
111367. Sulfur combines with oxygen to form sulfur dioxide.
111368. Ethane burns in air to form carbon dioxide and water vapor and release heat.
111369. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
111370. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111371. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
111372. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
111373. Zinc reacts with oxygen in air to form zinc oxide.
111374. Silicon reacts with oxygen to form silicon dioxide.
111375. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
111376. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
111377. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
111378. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
111379. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
111380. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
111381. Carbon combines with oxygen to form carbon dioxide.
111382. Propane burns in air to form carbon dioxide and water vapor and release heat.
111383. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
111384. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111385. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
111386. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
111387. Iron reacts with oxygen in air to form iron(III) oxide.
111388. Carbon reacts with oxygen to form carbon dioxide.
111389. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
111390. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
111391. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
111392. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
111393. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
111394. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
111395. Phosphorus combines with oxygen to form phosphorus pentoxide.
111396. Butane burns in air to form carbon dioxide and water vapor and release heat.
111397. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
111398. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111399. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
111400. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
111401. Copper reacts with oxygen in air to form copper(II) oxide.
111402. Sulfur reacts with oxygen to form sulfur dioxide.
111403. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
111404. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
111405. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
111406. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
111407. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
111408. On heating, hydrogen peroxide decomposes to form water and oxygen.
111409. Magnesium combines with oxygen to form magnesium oxide.
111410. Carbon Monoxide burns in air to form carbon dioxide and release heat.
111411. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
111412. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111413. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.

111414. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
111415. Lead reacts with oxygen in air to form lead(II) oxide.
111416. Phosphorus reacts with oxygen to form phosphorus pentoxide.
111417. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
111418. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
111419. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
111420. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
111421. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
111422. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
111423. Iron combines with sulfur to form iron sulfide.
111424. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
111425. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
111426. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111427. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
111428. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
111429. Magnesium reacts with oxygen in air to form magnesium oxide.
111430. Hydrogen reacts with oxygen to form water.
111431. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
111432. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
111433. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
111434. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
111435. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
111436. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
111437. Calcium Oxide combines with water to form calcium hydroxide.
111438. Hydrogen burns in air to form water vapor and release heat.
111439. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
111440. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111441. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
111442. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
111443. Calcium reacts with oxygen in air to form calcium oxide.
111444. Nitrogen reacts with oxygen to form nitrogen oxides.
111445. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
111446. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
111447. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
111448. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
111449. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
111450. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
111451. Hydrogen combines with oxygen to form water.
111452. Methane burns in air to form carbon dioxide and water vapor and release heat.
111453. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
111454. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111455. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
111456. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
111457. Aluminium reacts with oxygen in air to form aluminium oxide.
111458. Silicon reacts with oxygen to form silicon dioxide.
111459. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
111460. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
111461. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
111462. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
111463. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
111464. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
111465. Nitrogen combines with hydrogen to form ammonia.
111466. Ethane burns in air to form carbon dioxide and water vapor and release heat.
111467. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
111468. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111469. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
111470. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
111471. Zinc reacts with oxygen in air to form zinc oxide.
111472. Carbon reacts with oxygen to form carbon dioxide.
111473. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
111474. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
111475. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
111476. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
111477. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
111478. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
111479. Sulfur combines with oxygen to form sulfur dioxide.
111480. Propane burns in air to form carbon dioxide and water vapor and release heat.
111481. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
111482. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111483. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
111484. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
111485. Iron reacts with oxygen in air to form iron(III) oxide.
111486. Sulfur reacts with oxygen to form sulfur dioxide.
111487. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
111488. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
111489. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
111490. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
111491. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
111492. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
111493. Carbon combines with oxygen to form carbon dioxide.
111494. Butane burns in air to form carbon dioxide and water vapor and release heat.
111495. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
111496. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111497. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
111498. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
111499. Copper reacts with oxygen in air to form copper(II) oxide.
111500. Phosphorus reacts with oxygen to form phosphorus pentoxide.
111501. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
111502. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
111503. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
111504. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

111505. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
111506. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
111507. Phosphorus combines with oxygen to form phosphorus pentoxide.
111508. Carbon Monoxide burns in air to form carbon dioxide and release heat.
111509. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
111510. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111511. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
111512. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
111513. Lead reacts with oxygen in air to form lead(II) oxide.
111514. Hydrogen reacts with oxygen to form water.
111515. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
111516. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
111517. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
111518. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
111519. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
111520. On heating, hydrogen peroxide decomposes to form water and oxygen.
111521. Magnesium combines with oxygen to form magnesium oxide.
111522. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
111523. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
111524. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111525. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
111526. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
111527. Magnesium reacts with oxygen in air to form magnesium oxide.
111528. Nitrogen reacts with oxygen to form nitrogen oxides.
111529. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
111530. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
111531. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
111532. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
111533. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
111534. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
111535. Iron combines with sulfur to form iron sulfide.
111536. Hydrogen burns in air to form water vapor and release heat.
111537. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
111538. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111539. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
111540. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
111541. Calcium reacts with oxygen in air to form calcium oxide.
111542. Silicon reacts with oxygen to form silicon dioxide.
111543. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
111544. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
111545. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
111546. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
111547. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
111548. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
111549. Calcium Oxide combines with water to form calcium hydroxide.
111550. Methane burns in air to form carbon dioxide and water vapor and release heat.
111551. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
111552. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111553. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
111554. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
111555. Aluminium reacts with oxygen in air to form aluminium oxide.
111556. Carbon reacts with oxygen to form carbon dioxide.
111557. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
111558. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
111559. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
111560. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
111561. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
111562. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
111563. Hydrogen combines with oxygen to form water.
111564. Ethane burns in air to form carbon dioxide and water vapor and release heat.
111565. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
111566. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111567. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
111568. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
111569. Zinc reacts with oxygen in air to form zinc oxide.
111570. Sulfur reacts with oxygen to form sulfur dioxide.
111571. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
111572. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
111573. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
111574. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
111575. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
111576. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
111577. Nitrogen combines with hydrogen to form ammonia.
111578. Propane burns in air to form carbon dioxide and water vapor and release heat.
111579. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
111580. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111581. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
111582. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
111583. Iron reacts with oxygen in air to form iron(III) oxide.
111584. Phosphorus reacts with oxygen to form phosphorus pentoxide.
111585. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
111586. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
111587. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
111588. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
111589. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
111590. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
111591. Sulfur combines with oxygen to form sulfur dioxide.
111592. Butane burns in air to form carbon dioxide and water vapor and release heat.
111593. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
111594. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111595. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
111596. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

111597. Copper reacts with oxygen in air to form copper(II) oxide.
111598. Hydrogen reacts with oxygen to form water.
111599. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
111600. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
111601. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
111602. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
111603. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
111604. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
111605. Carbon combines with oxygen to form carbon dioxide.
111606. Carbon Monoxide burns in air to form carbon dioxide and release heat.
111607. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
111608. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111609. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
111610. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
111611. Lead reacts with oxygen in air to form lead(II) oxide.
111612. Nitrogen reacts with oxygen to form nitrogen oxides.
111613. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
111614. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
111615. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
111616. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
111617. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
111618. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
111619. Phosphorus combines with oxygen to form phosphorus pentoxide.
111620. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
111621. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
111622. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111623. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
111624. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
111625. Magnesium reacts with oxygen in air to form magnesium oxide.
111626. Silicon reacts with oxygen to form silicon dioxide.
111627. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
111628. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
111629. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
111630. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
111631. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
111632. On heating, hydrogen peroxide decomposes to form water and oxygen.
111633. Magnesium combines with oxygen to form magnesium oxide.
111634. Hydrogen burns in air to form water vapor and release heat.
111635. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
111636. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111637. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
111638. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
111639. Calcium reacts with oxygen in air to form calcium oxide.
111640. Carbon reacts with oxygen to form carbon dioxide.
111641. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
111642. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
111643. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
111644. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
111645. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
111646. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
111647. Iron combines with sulfur to form iron sulfide.
111648. Methane burns in air to form carbon dioxide and water vapor and release heat.
111649. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
111650. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111651. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
111652. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
111653. Aluminium reacts with oxygen in air to form aluminium oxide.
111654. Sulfur reacts with oxygen to form sulfur dioxide.
111655. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
111656. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
111657. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
111658. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
111659. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
111660. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
111661. Calcium Oxide combines with water to form calcium hydroxide.
111662. Ethane burns in air to form carbon dioxide and water vapor and release heat.
111663. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
111664. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111665. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
111666. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
111667. Zinc reacts with oxygen in air to form zinc oxide.
111668. Phosphorus reacts with oxygen to form phosphorus pentoxide.
111669. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
111670. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
111671. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
111672. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
111673. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
111674. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
111675. Hydrogen combines with oxygen to form water.
111676. Propane burns in air to form carbon dioxide and water vapor and release heat.
111677. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
111678. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111679. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
111680. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
111681. Iron reacts with oxygen in air to form iron(III) oxide.
111682. Hydrogen reacts with oxygen to form water.
111683. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
111684. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
111685. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
111686. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
111687. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

111688. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
111689. Nitrogen combines with hydrogen to form ammonia.
111690. Butane burns in air to form carbon dioxide and water vapor and release heat.
111691. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
111692. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111693. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
111694. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
111695. Copper reacts with oxygen in air to form copper(II) oxide.
111696. Nitrogen reacts with oxygen to form nitrogen oxides.
111697. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
111698. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
111699. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
111700. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
111701. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
111702. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
111703. Sulfur combines with oxygen to form sulfur dioxide.
111704. Carbon Monoxide burns in air to form carbon dioxide and release heat.
111705. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
111706. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111707. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
111708. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
111709. Lead reacts with oxygen in air to form lead(II) oxide.
111710. Silicon reacts with oxygen to form silicon dioxide.
111711. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
111712. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
111713. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
111714. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
111715. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
111716. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
111717. Carbon combines with oxygen to form carbon dioxide.
111718. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
111719. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
111720. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111721. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
111722. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
111723. Magnesium reacts with oxygen in air to form magnesium oxide.
111724. Carbon reacts with oxygen to form carbon dioxide.
111725. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
111726. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
111727. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
111728. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
111729. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
111730. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
111731. Phosphorus combines with oxygen to form phosphorus pentoxide.
111732. Hydrogen burns in air to form water vapor and release heat.
111733. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
111734. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111735. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
111736. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
111737. Calcium reacts with oxygen in air to form calcium oxide.
111738. Sulfur reacts with oxygen to form sulfur dioxide.
111739. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
111740. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
111741. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
111742. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
111743. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
111744. On heating, hydrogen peroxide decomposes to form water and oxygen.
111745. Magnesium combines with oxygen to form magnesium oxide.
111746. Methane burns in air to form carbon dioxide and water vapor and release heat.
111747. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
111748. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111749. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
111750. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
111751. Aluminium reacts with oxygen in air to form aluminium oxide.
111752. Phosphorus reacts with oxygen to form phosphorus pentoxide.
111753. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
111754. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
111755. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
111756. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
111757. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
111758. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
111759. Iron combines with sulfur to form iron sulfide.
111760. Ethane burns in air to form carbon dioxide and water vapor and release heat.
111761. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
111762. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111763. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
111764. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
111765. Zinc reacts with oxygen in air to form zinc oxide.
111766. Hydrogen reacts with oxygen to form water.
111767. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
111768. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
111769. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
111770. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
111771. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
111772. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
111773. Calcium Oxide combines with water to form calcium hydroxide.
111774. Propane burns in air to form carbon dioxide and water vapor and release heat.
111775. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
111776. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111777. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
111778. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
111779. Iron reacts with oxygen in air to form iron(III) oxide.

111780. Nitrogen reacts with oxygen to form nitrogen oxides.
111781. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
111782. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
111783. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
111784. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
111785. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
111786. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
111787. Hydrogen combines with oxygen to form water.
111788. Butane burns in air to form carbon dioxide and water vapor and release heat.
111789. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
111790. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111791. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
111792. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
111793. Copper reacts with oxygen in air to form copper(II) oxide.
111794. Silicon reacts with oxygen to form silicon dioxide.
111795. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
111796. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
111797. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
111798. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
111799. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
111800. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
111801. Nitrogen combines with hydrogen to form ammonia.
111802. Carbon Monoxide burns in air to form carbon dioxide and release heat.
111803. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
111804. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111805. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
111806. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
111807. Lead reacts with oxygen in air to form lead(II) oxide.
111808. Carbon reacts with oxygen to form carbon dioxide.
111809. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
111810. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
111811. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
111812. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
111813. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
111814. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
111815. Sulfur combines with oxygen to form sulfur dioxide.
111816. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
111817. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
111818. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111819. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
111820. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
111821. Magnesium reacts with oxygen in air to form magnesium oxide.
111822. Sulfur reacts with oxygen to form sulfur dioxide.
111823. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
111824. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
111825. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
111826. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
111827. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
111828. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
111829. Carbon combines with oxygen to form carbon dioxide.
111830. Hydrogen burns in air to form water vapor and release heat.
111831. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
111832. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111833. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
111834. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
111835. Calcium reacts with oxygen in air to form calcium oxide.
111836. Phosphorus reacts with oxygen to form phosphorus pentoxide.
111837. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
111838. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
111839. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
111840. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
111841. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
111842. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
111843. Phosphorus combines with oxygen to form phosphorus pentoxide.
111844. Methane burns in air to form carbon dioxide and water vapor and release heat.
111845. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
111846. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111847. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
111848. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
111849. Aluminium reacts with oxygen in air to form aluminium oxide.
111850. Hydrogen reacts with oxygen to form water.
111851. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
111852. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
111853. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
111854. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
111855. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
111856. On heating, hydrogen peroxide decomposes to form water and oxygen.
111857. Magnesium combines with oxygen to form magnesium oxide.
111858. Ethane burns in air to form carbon dioxide and water vapor and release heat.
111859. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
111860. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111861. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
111862. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
111863. Zinc reacts with oxygen in air to form zinc oxide.
111864. Nitrogen reacts with oxygen to form nitrogen oxides.
111865. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
111866. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
111867. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
111868. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
111869. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
111870. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
111871. Iron combines with sulfur to form iron sulfide.

111872. Propane burns in air to form carbon dioxide and water vapor and release heat.
111873. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
111874. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111875. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
111876. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
111877. Iron reacts with oxygen in air to form iron(III) oxide.
111878. Silicon reacts with oxygen to form silicon dioxide.
111879. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
111880. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
111881. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
111882. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
111883. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
111884. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
111885. Calcium Oxide combines with water to form calcium hydroxide.
111886. Butane burns in air to form carbon dioxide and water vapor and release heat.
111887. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
111888. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111889. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
111890. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
111891. Copper reacts with oxygen in air to form copper(II) oxide.
111892. Carbon reacts with oxygen to form carbon dioxide.
111893. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
111894. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
111895. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
111896. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
111897. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
111898. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
111899. Hydrogen combines with oxygen to form water.
111900. Carbon Monoxide burns in air to form carbon dioxide and release heat.
111901. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
111902. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111903. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
111904. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
111905. Lead reacts with oxygen in air to form lead(II) oxide.
111906. Sulfur reacts with oxygen to form sulfur dioxide.
111907. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
111908. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
111909. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
111910. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
111911. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
111912. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
111913. Nitrogen combines with hydrogen to form ammonia.
111914. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
111915. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
111916. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111917. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
111918. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
111919. Magnesium reacts with oxygen in air to form magnesium oxide.
111920. Phosphorus reacts with oxygen to form phosphorus pentoxide.
111921. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
111922. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
111923. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
111924. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
111925. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
111926. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
111927. Sulfur combines with oxygen to form sulfur dioxide.
111928. Hydrogen burns in air to form water vapor and release heat.
111929. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
111930. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111931. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
111932. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
111933. Calcium reacts with oxygen in air to form calcium oxide.
111934. Hydrogen reacts with oxygen to form water.
111935. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
111936. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
111937. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
111938. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
111939. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
111940. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
111941. Carbon combines with oxygen to form carbon dioxide.
111942. Methane burns in air to form carbon dioxide and water vapor and release heat.
111943. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
111944. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111945. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
111946. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
111947. Aluminium reacts with oxygen in air to form aluminium oxide.
111948. Nitrogen reacts with oxygen to form nitrogen oxides.
111949. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
111950. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
111951. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
111952. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
111953. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
111954. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
111955. Phosphorus combines with oxygen to form phosphorus pentoxide.
111956. Ethane burns in air to form carbon dioxide and water vapor and release heat.
111957. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
111958. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111959. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
111960. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
111961. Zinc reacts with oxygen in air to form zinc oxide.
111962. Silicon reacts with oxygen to form silicon dioxide.

111963. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
111964. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
111965. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
111966. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
111967. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
111968. On heating, hydrogen peroxide decomposes to form water and oxygen.
111969. Magnesium combines with oxygen to form magnesium oxide.
111970. Propane burns in air to form carbon dioxide and water vapor and release heat.
111971. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
111972. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111973. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
111974. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
111975. Iron reacts with oxygen in air to form iron(III) oxide.
111976. Carbon reacts with oxygen to form carbon dioxide.
111977. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
111978. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
111979. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
111980. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
111981. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
111982. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
111983. Iron combines with sulfur to form iron sulfide.
111984. Butane burns in air to form carbon dioxide and water vapor and release heat.
111985. Copper(I) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
111986. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
111987. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
111988. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
111989. Copper reacts with oxygen in air to form copper(II) oxide.
111990. Sulfur reacts with oxygen to form sulfur dioxide.
111991. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
111992. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
111993. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
111994. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
111995. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
111996. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
111997. Calcium Oxide combines with water to form calcium hydroxide.
111998. Carbon Monoxide burns in air to form carbon dioxide and release heat.
111999. Copper(I) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
112000. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112001. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
112002. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
112003. Lead reacts with oxygen in air to form lead(II) oxide.
112004. Phosphorus reacts with oxygen to form phosphorus pentoxide.
112005. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
112006. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
112007. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
112008. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
112009. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
112010. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
112011. Hydrogen combines with oxygen to form water.
112012. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
112013. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
112014. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112015. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
112016. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
112017. Magnesium reacts with oxygen in air to form magnesium oxide.
112018. Hydrogen reacts with oxygen to form water.
112019. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
112020. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
112021. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
112022. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
112023. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
112024. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
112025. Nitrogen combines with hydrogen to form ammonia.
112026. Hydrogen burns in air to form water vapor and release heat.
112027. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
112028. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112029. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
112030. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
112031. Calcium reacts with oxygen in air to form calcium oxide.
112032. Nitrogen reacts with oxygen to form nitrogen oxides.
112033. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
112034. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
112035. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
112036. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
112037. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
112038. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
112039. Sulfur combines with oxygen to form sulfur dioxide.
112040. Methane burns in air to form carbon dioxide and water vapor and release heat.
112041. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
112042. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112043. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
112044. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
112045. Aluminium reacts with oxygen in air to form aluminium oxide.
112046. Silicon reacts with oxygen to form silicon dioxide.
112047. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
112048. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
112049. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
112050. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
112051. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
112052. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
112053. Carbon combines with oxygen to form carbon dioxide.

112054. Ethane burns in air to form carbon dioxide and water vapor and release heat.
112055. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
112056. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112057. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
112058. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
112059. Zinc reacts with oxygen in air to form zinc oxide.
112060. Carbon reacts with oxygen to form carbon dioxide.
112061. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
112062. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
112063. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
112064. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
112065. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
112066. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
112067. Phosphorus combines with oxygen to form phosphorus pentoxide.
112068. Propane burns in air to form carbon dioxide and water vapor and release heat.
112069. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
112070. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112071. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
112072. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
112073. Iron reacts with oxygen in air to form iron(III) oxide.
112074. Sulfur reacts with oxygen to form sulfur dioxide.
112075. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
112076. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
112077. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
112078. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
112079. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
112080. On heating, hydrogen peroxide decomposes to form water and oxygen.
112081. Magnesium combines with oxygen to form magnesium oxide.
112082. Butane burns in air to form carbon dioxide and water vapor and release heat.
112083. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
112084. Copper(I) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112085. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
112086. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
112087. Copper reacts with oxygen in air to form copper(II) oxide.
112088. Phosphorus reacts with oxygen to form phosphorus pentoxide.
112089. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
112090. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
112091. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
112092. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
112093. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
112094. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
112095. Iron combines with sulfur to form iron sulfide.
112096. Carbon Monoxide burns in air to form carbon dioxide and release heat.
112097. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
112098. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112099. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
112100. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
112101. Lead reacts with oxygen in air to form lead(II) oxide.
112102. Hydrogen reacts with oxygen to form water.
112103. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
112104. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
112105. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
112106. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
112107. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
112108. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
112109. Calcium Oxide combines with water to form calcium hydroxide.
112110. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
112111. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
112112. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112113. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
112114. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
112115. Magnesium reacts with oxygen in air to form magnesium oxide.
112116. Nitrogen reacts with oxygen to form nitrogen oxides.
112117. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
112118. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
112119. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
112120. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
112121. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
112122. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
112123. Hydrogen combines with oxygen to form water.
112124. Hydrogen burns in air to form water vapor and release heat.
112125. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
112126. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112127. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
112128. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
112129. Calcium reacts with oxygen in air to form calcium oxide.
112130. Silicon reacts with oxygen to form silicon dioxide.
112131. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
112132. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
112133. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
112134. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
112135. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
112136. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
112137. Nitrogen combines with hydrogen to form ammonia.
112138. Methane burns in air to form carbon dioxide and water vapor and release heat.
112139. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
112140. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112141. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
112142. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
112143. Aluminium reacts with oxygen in air to form aluminium oxide.
112144. Carbon reacts with oxygen to form carbon dioxide.

112145. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
112146. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
112147. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
112148. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
112149. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
112150. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
112151. Sulfur combines with oxygen to form sulfur dioxide.
112152. Ethane burns in air to form carbon dioxide and water vapor and release heat.
112153. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
112154. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112155. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
112156. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
112157. Zinc reacts with oxygen in air to form zinc oxide.
112158. Sulfur reacts with oxygen to form sulfur dioxide.
112159. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
112160. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
112161. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
112162. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
112163. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
112164. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
112165. Carbon combines with oxygen to form carbon dioxide.
112166. Propane burns in air to form carbon dioxide and water vapor and release heat.
112167. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
112168. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112169. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
112170. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
112171. Iron reacts with oxygen in air to form iron(III) oxide.
112172. Phosphorus reacts with oxygen to form phosphorus pentoxide.
112173. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
112174. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
112175. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
112176. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
112177. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
112178. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
112179. Phosphorus combines with oxygen to form phosphorus pentoxide.
112180. Butane burns in air to form carbon dioxide and water vapor and release heat.
112181. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
112182. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112183. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
112184. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
112185. Copper reacts with oxygen in air to form copper(II) oxide.
112186. Hydrogen reacts with oxygen to form water.
112187. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
112188. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
112189. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
112190. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
112191. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
112192. On heating, hydrogen peroxide decomposes to form water and oxygen.
112193. Magnesium combines with oxygen to form magnesium oxide.
112194. Carbon Monoxide burns in air to form carbon dioxide and release heat.
112195. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
112196. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112197. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
112198. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
112199. Lead reacts with oxygen in air to form lead(II) oxide.
112200. Nitrogen reacts with oxygen to form nitrogen oxides.
112201. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
112202. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
112203. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
112204. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
112205. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
112206. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
112207. Iron combines with sulfur to form iron sulfide.
112208. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
112209. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
112210. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112211. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
112212. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
112213. Magnesium reacts with oxygen in air to form magnesium oxide.
112214. Silicon reacts with oxygen to form silicon dioxide.
112215. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
112216. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
112217. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
112218. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
112219. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
112220. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
112221. Calcium Oxide combines with water to form calcium hydroxide.
112222. Hydrogen burns in air to form water vapor and release heat.
112223. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
112224. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112225. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
112226. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
112227. Calcium reacts with oxygen in air to form calcium oxide.
112228. Carbon reacts with oxygen to form carbon dioxide.
112229. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
112230. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
112231. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
112232. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
112233. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
112234. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
112235. Hydrogen combines with oxygen to form water.
112236. Methane burns in air to form carbon dioxide and water vapor and release heat.

112237. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
112238. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112239. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
112240. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
112241. Aluminium reacts with oxygen in air to form aluminium oxide.
112242. Sulfur reacts with oxygen to form sulfur dioxide.
112243. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
112244. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
112245. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
112246. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
112247. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
112248. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
112249. Nitrogen combines with hydrogen to form ammonia.
112250. Ethane burns in air to form carbon dioxide and water vapor and release heat.
112251. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
112252. Copper(I) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112253. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
112254. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
112255. Zinc reacts with oxygen in air to form zinc oxide.
112256. Phosphorus reacts with oxygen to form phosphorus pentoxide.
112257. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
112258. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
112259. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
112260. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
112261. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
112262. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
112263. Sulfur combines with oxygen to form sulfur dioxide.
112264. Propane burns in air to form carbon dioxide and water vapor and release heat.
112265. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
112266. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112267. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
112268. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
112269. Iron reacts with oxygen in air to form iron(III) oxide.
112270. Hydrogen reacts with oxygen to form water.
112271. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
112272. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
112273. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
112274. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
112275. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
112276. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
112277. Carbon combines with oxygen to form carbon dioxide.
112278. Butane burns in air to form carbon dioxide and water vapor and release heat.
112279. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
112280. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112281. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
112282. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
112283. Copper reacts with oxygen in air to form copper(II) oxide.
112284. Nitrogen reacts with oxygen to form nitrogen oxides.
112285. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
112286. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
112287. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
112288. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
112289. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
112290. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
112291. Phosphorus combines with oxygen to form phosphorus pentoxide.
112292. Carbon Monoxide burns in air to form carbon dioxide and release heat.
112293. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
112294. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112295. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
112296. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
112297. Lead reacts with oxygen in air to form lead(II) oxide.
112298. Silicon reacts with oxygen to form silicon dioxide.
112299. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
112300. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
112301. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
112302. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
112303. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
112304. On heating, hydrogen peroxide decomposes to form water and oxygen.
112305. Magnesium combines with oxygen to form magnesium oxide.
112306. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
112307. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
112308. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112309. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
112310. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
112311. Magnesium reacts with oxygen in air to form magnesium oxide.
112312. Carbon reacts with oxygen to form carbon dioxide.
112313. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
112314. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
112315. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
112316. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
112317. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
112318. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
112319. Iron combines with sulfur to form iron sulfide.
112320. Hydrogen burns in air to form water vapor and release heat.
112321. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
112322. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112323. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
112324. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
112325. Calcium reacts with oxygen in air to form calcium oxide.
112326. Sulfur reacts with oxygen to form sulfur dioxide.
112327. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.

112328. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
112329. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
112330. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
112331. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
112332. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
112333. Calcium Oxide combines with water to form calcium hydroxide.
112334. Methane burns in air to form carbon dioxide and water vapor and release heat.
112335. Copper(I) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
112336. Copper(I) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112337. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
112338. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
112339. Aluminium reacts with oxygen in air to form aluminium oxide.
112340. Phosphorus reacts with oxygen to form phosphorus pentoxide.
112341. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
112342. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
112343. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
112344. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
112345. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
112346. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
112347. Hydrogen combines with oxygen to form water.
112348. Ethane burns in air to form carbon dioxide and water vapor and release heat.
112349. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
112350. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112351. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
112352. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
112353. Zinc reacts with oxygen in air to form zinc oxide.
112354. Hydrogen reacts with oxygen to form water.
112355. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
112356. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
112357. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
112358. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
112359. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
112360. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
112361. Nitrogen combines with hydrogen to form ammonia.
112362. Propane burns in air to form carbon dioxide and water vapor and release heat.
112363. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
112364. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112365. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
112366. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
112367. Iron reacts with oxygen in air to form iron(III) oxide.
112368. Nitrogen reacts with oxygen to form nitrogen oxides.
112369. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
112370. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
112371. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
112372. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
112373. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
112374. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
112375. Sulfur combines with oxygen to form sulfur dioxide.
112376. Butane burns in air to form carbon dioxide and water vapor and release heat.
112377. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
112378. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112379. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
112380. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
112381. Copper reacts with oxygen in air to form copper(II) oxide.
112382. Silicon reacts with oxygen to form silicon dioxide.
112383. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
112384. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
112385. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
112386. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
112387. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
112388. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
112389. Carbon combines with oxygen to form carbon dioxide.
112390. Carbon Monoxide burns in air to form carbon dioxide and release heat.
112391. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
112392. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112393. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
112394. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
112395. Lead reacts with oxygen in air to form lead(II) oxide.
112396. Carbon reacts with oxygen to form carbon dioxide.
112397. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
112398. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
112399. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
112400. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
112401. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
112402. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
112403. Phosphorus combines with oxygen to form phosphorus pentoxide.
112404. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
112405. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
112406. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112407. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
112408. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
112409. Magnesium reacts with oxygen in air to form magnesium oxide.
112410. Sulfur reacts with oxygen to form sulfur dioxide.
112411. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
112412. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
112413. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
112414. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
112415. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
112416. On heating, hydrogen peroxide decomposes to form water and oxygen.
112417. Magnesium combines with oxygen to form magnesium oxide.
112418. Hydrogen burns in air to form water vapor and release heat.

112419. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
112420. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112421. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
112422. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
112423. Calcium reacts with oxygen in air to form calcium oxide.
112424. Phosphorus reacts with oxygen to form phosphorus pentoxide.
112425. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
112426. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
112427. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
112428. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
112429. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
112430. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
112431. Iron combines with sulfur to form iron sulfide.
112432. Methane burns in air to form carbon dioxide and water vapor and release heat.
112433. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
112434. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112435. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
112436. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
112437. Aluminium reacts with oxygen in air to form aluminium oxide.
112438. Hydrogen reacts with oxygen to form water.
112439. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
112440. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
112441. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
112442. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
112443. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
112444. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
112445. Calcium Oxide combines with water to form calcium hydroxide.
112446. Ethane burns in air to form carbon dioxide and water vapor and release heat.
112447. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
112448. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112449. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
112450. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
112451. Zinc reacts with oxygen in air to form zinc oxide.
112452. Nitrogen reacts with oxygen to form nitrogen oxides.
112453. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
112454. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
112455. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
112456. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
112457. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
112458. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
112459. Hydrogen combines with oxygen to form water.
112460. Propane burns in air to form carbon dioxide and water vapor and release heat.
112461. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
112462. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112463. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
112464. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
112465. Iron reacts with oxygen in air to form iron(III) oxide.
112466. Silicon reacts with oxygen to form silicon dioxide.
112467. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
112468. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
112469. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
112470. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
112471. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
112472. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
112473. Nitrogen combines with hydrogen to form ammonia.
112474. Butane burns in air to form carbon dioxide and water vapor and release heat.
112475. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
112476. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112477. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
112478. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
112479. Copper reacts with oxygen in air to form copper(II) oxide.
112480. Carbon reacts with oxygen to form carbon dioxide.
112481. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
112482. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
112483. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
112484. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
112485. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
112486. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
112487. Sulfur combines with oxygen to form sulfur dioxide.
112488. Carbon Monoxide burns in air to form carbon dioxide and release heat.
112489. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
112490. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112491. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
112492. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
112493. Lead reacts with oxygen in air to form lead(II) oxide.
112494. Sulfur reacts with oxygen to form sulfur dioxide.
112495. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
112496. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
112497. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
112498. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
112499. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
112500. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
112501. Carbon combines with oxygen to form carbon dioxide.
112502. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
112503. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
112504. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112505. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
112506. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
112507. Magnesium reacts with oxygen in air to form magnesium oxide.
112508. Phosphorus reacts with oxygen to form phosphorus pentoxide.
112509. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.

112510. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.

112511. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.

112512. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.

112513. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.

112514. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.

112515. Phosphorus combines with oxygen to form phosphorus pentoxide.

112516. Hydrogen burns in air to form water vapor and release heat.

112517. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.

112518. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

112519. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.

112520. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

112521. Calcium reacts with oxygen in air to form calcium oxide.

112522. Hydrogen reacts with oxygen to form water.

112523. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.

112524. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.

112525. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.

112526. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.

112527. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.

112528. On heating, hydrogen peroxide decomposes to form water and oxygen.

112529. Magnesium combines with oxygen to form magnesium oxide.

112530. Methane burns in air to form carbon dioxide and water vapor and release heat.

112531. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

112532. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

112533. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.

112534. Calcium reacts with water to form calcium hydroxide and hydrogen gas.

112535. Aluminium reacts with oxygen in air to form aluminium oxide.

112536. Nitrogen reacts with oxygen to form nitrogen oxides.

112537. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.

112538. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

112539. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.

112540. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.

112541. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.

112542. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.

112543. Iron combines with sulfur to form iron sulfide.

112544. Ethane burns in air to form carbon dioxide and water vapor and release heat.

112545. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

112546. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

112547. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.

112548. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.

112549. Zinc reacts with oxygen in air to form zinc oxide.

112550. Silicon reacts with oxygen to form silicon dioxide.

112551. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.

112552. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.

112553. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

112554. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.

112555. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

112556. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.

112557. Calcium Oxide combines with water to form calcium hydroxide.

112558. Propane burns in air to form carbon dioxide and water vapor and release heat.

112559. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.

112560. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

112561. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.

112562. Lithium reacts with water to form lithium hydroxide and hydrogen gas.

112563. Iron reacts with oxygen in air to form iron(III) oxide.

112564. Carbon reacts with oxygen to form carbon dioxide.

112565. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.

112566. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.

112567. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.

112568. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

112569. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

112570. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.

112571. Hydrogen combines with oxygen to form water.

112572. Butane burns in air to form carbon dioxide and water vapor and release heat.

112573. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.

112574. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

112575. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.

112576. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

112577. Copper reacts with oxygen in air to form copper(II) oxide.

112578. Sulfur reacts with oxygen to form sulfur dioxide.

112579. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.

112580. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.

112581. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

112582. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.

112583. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.

112584. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.

112585. Nitrogen combines with hydrogen to form ammonia.

112586. Carbon Monoxide burns in air to form carbon dioxide and release heat.

112587. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.

112588. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

112589. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.

112590. Potassium reacts with water to form potassium hydroxide and hydrogen gas.

112591. Lead reacts with oxygen in air to form lead(II) oxide.

112592. Phosphorus reacts with oxygen to form phosphorus pentoxide.

112593. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.

112594. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.

112595. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.

112596. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.

112597. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

112598. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.

112599. Sulfur combines with oxygen to form sulfur dioxide.

112600. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.

112601. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
112602. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112603. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
112604. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
112605. Magnesium reacts with oxygen in air to form magnesium oxide.
112606. Hydrogen reacts with oxygen to form water.
112607. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
112608. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
112609. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
112610. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
112611. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
112612. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
112613. Carbon combines with oxygen to form carbon dioxide.
112614. Hydrogen burns in air to form water vapor and release heat.
112615. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
112616. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112617. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
112618. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
112619. Calcium reacts with oxygen in air to form calcium oxide.
112620. Nitrogen reacts with oxygen to form nitrogen oxides.
112621. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
112622. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
112623. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
112624. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
112625. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
112626. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
112627. Phosphorus combines with oxygen to form phosphorus pentoxide.
112628. Methane burns in air to form carbon dioxide and water vapor and release heat.
112629. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
112630. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112631. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
112632. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
112633. Aluminium reacts with oxygen in air to form aluminium oxide.
112634. Silicon reacts with oxygen to form silicon dioxide.
112635. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
112636. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
112637. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
112638. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
112639. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
112640. On heating, hydrogen peroxide decomposes to form water and oxygen.
112641. Magnesium combines with oxygen to form magnesium oxide.
112642. Ethane burns in air to form carbon dioxide and water vapor and release heat.
112643. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
112644. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112645. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
112646. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
112647. Zinc reacts with oxygen in air to form zinc oxide.
112648. Carbon reacts with oxygen to form carbon dioxide.
112649. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
112650. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
112651. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
112652. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
112653. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
112654. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
112655. Iron combines with sulfur to form iron sulfide.
112656. Propane burns in air to form carbon dioxide and water vapor and release heat.
112657. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
112658. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112659. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
112660. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
112661. Iron reacts with oxygen in air to form iron(III) oxide.
112662. Sulfur reacts with oxygen to form sulfur dioxide.
112663. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
112664. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
112665. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
112666. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
112667. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
112668. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
112669. Calcium Oxide combines with water to form calcium hydroxide.
112670. Butane burns in air to form carbon dioxide and water vapor and release heat.
112671. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
112672. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112673. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
112674. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
112675. Copper reacts with oxygen in air to form copper(II) oxide.
112676. Phosphorus reacts with oxygen to form phosphorus pentoxide.
112677. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
112678. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
112679. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
112680. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
112681. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
112682. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
112683. Hydrogen combines with oxygen to form water.
112684. Carbon Monoxide burns in air to form carbon dioxide and release heat.
112685. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
112686. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112687. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
112688. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
112689. Lead reacts with oxygen in air to form lead(II) oxide.
112690. Hydrogen reacts with oxygen to form water.
112691. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.

112692. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
112693. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
112694. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
112695. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
112696. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
112697. Nitrogen combines with hydrogen to form ammonia.
112698. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
112699. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
112700. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112701. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
112702. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
112703. Magnesium reacts with oxygen in air to form magnesium oxide.
112704. Nitrogen reacts with oxygen to form nitrogen oxides.
112705. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
112706. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
112707. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
112708. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
112709. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
112710. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
112711. Sulfur combines with oxygen to form sulfur dioxide.
112712. Hydrogen burns in air to form water vapor and release heat.
112713. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
112714. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112715. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
112716. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
112717. Calcium reacts with oxygen in air to form calcium oxide.
112718. Silicon reacts with oxygen to form silicon dioxide.
112719. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
112720. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
112721. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
112722. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
112723. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
112724. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
112725. Carbon combines with oxygen to form carbon dioxide.
112726. Methane burns in air to form carbon dioxide and water vapor and release heat.
112727. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
112728. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112729. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
112730. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
112731. Aluminium reacts with oxygen in air to form aluminium oxide.
112732. Carbon reacts with oxygen to form carbon dioxide.
112733. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
112734. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
112735. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
112736. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
112737. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
112738. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
112739. Phosphorus combines with oxygen to form phosphorus pentoxide.
112740. Ethane burns in air to form carbon dioxide and water vapor and release heat.
112741. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
112742. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112743. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
112744. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
112745. Zinc reacts with oxygen in air to form zinc oxide.
112746. Sulfur reacts with oxygen to form sulfur dioxide.
112747. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
112748. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
112749. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
112750. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
112751. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
112752. On heating, hydrogen peroxide decomposes to form water and oxygen.
112753. Magnesium combines with oxygen to form magnesium oxide.
112754. Propane burns in air to form carbon dioxide and water vapor and release heat.
112755. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
112756. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112757. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
112758. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
112759. Iron reacts with oxygen in air to form iron(III) oxide.
112760. Phosphorus reacts with oxygen to form phosphorus pentoxide.
112761. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
112762. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
112763. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
112764. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
112765. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
112766. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
112767. Iron combines with sulfur to form iron sulfide.
112768. Butane burns in air to form carbon dioxide and water vapor and release heat.
112769. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
112770. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112771. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
112772. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
112773. Copper reacts with oxygen in air to form copper(II) oxide.
112774. Hydrogen reacts with oxygen to form water.
112775. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
112776. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
112777. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
112778. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
112779. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
112780. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
112781. Calcium Oxide combines with water to form calcium hydroxide.
112782. Carbon Monoxide burns in air to form carbon dioxide and release heat.

112783. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
112784. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112785. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
112786. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
112787. Lead reacts with oxygen in air to form lead(II) oxide.
112788. Nitrogen reacts with oxygen to form nitrogen oxides.
112789. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
112790. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
112791. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
112792. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
112793. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
112794. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
112795. Hydrogen combines with oxygen to form water.
112796. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
112797. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
112798. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112799. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
112800. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
112801. Magnesium reacts with oxygen in air to form magnesium oxide.
112802. Silicon reacts with oxygen to form silicon dioxide.
112803. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
112804. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
112805. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
112806. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
112807. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
112808. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
112809. Nitrogen combines with hydrogen to form ammonia.
112810. Hydrogen burns in air to form water vapor and release heat.
112811. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
112812. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112813. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
112814. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
112815. Calcium reacts with oxygen in air to form calcium oxide.
112816. Carbon reacts with oxygen to form carbon dioxide.
112817. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
112818. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
112819. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
112820. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
112821. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
112822. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
112823. Sulfur combines with oxygen to form sulfur dioxide.
112824. Methane burns in air to form carbon dioxide and water vapor and release heat.
112825. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
112826. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112827. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
112828. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
112829. Aluminium reacts with oxygen in air to form aluminium oxide.
112830. Sulfur reacts with oxygen to form sulfur dioxide.
112831. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
112832. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
112833. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
112834. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
112835. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
112836. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
112837. Carbon combines with oxygen to form carbon dioxide.
112838. Ethane burns in air to form carbon dioxide and water vapor and release heat.
112839. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
112840. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112841. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
112842. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
112843. Zinc reacts with oxygen in air to form zinc oxide.
112844. Phosphorus reacts with oxygen to form phosphorus pentoxide.
112845. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
112846. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
112847. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
112848. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
112849. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
112850. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
112851. Phosphorus combines with oxygen to form phosphorus pentoxide.
112852. Propane burns in air to form carbon dioxide and water vapor and release heat.
112853. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
112854. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112855. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
112856. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
112857. Iron reacts with oxygen in air to form iron(III) oxide.
112858. Hydrogen reacts with oxygen to form water.
112859. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
112860. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
112861. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
112862. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
112863. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
112864. On heating, hydrogen peroxide decomposes to form water and oxygen.
112865. Magnesium combines with oxygen to form magnesium oxide.
112866. Butane burns in air to form carbon dioxide and water vapor and release heat.
112867. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
112868. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112869. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
112870. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
112871. Copper reacts with oxygen in air to form copper(II) oxide.
112872. Nitrogen reacts with oxygen to form nitrogen oxides.
112873. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
112874. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.

112875. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
112876. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
112877. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
112878. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
112879. Iron combines with sulfur to form iron sulfide.
112880. Carbon Monoxide burns in air to form carbon dioxide and release heat.
112881. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
112882. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112883. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
112884. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
112885. Lead reacts with oxygen in air to form lead(II) oxide.
112886. Silicon reacts with oxygen to form silicon dioxide.
112887. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
112888. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
112889. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
112890. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
112891. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
112892. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
112893. Calcium Oxide combines with water to form calcium hydroxide.
112894. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
112895. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
112896. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112897. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
112898. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
112899. Magnesium reacts with oxygen in air to form magnesium oxide.
112900. Carbon reacts with oxygen to form carbon dioxide.
112901. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
112902. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
112903. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
112904. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
112905. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
112906. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
112907. Hydrogen combines with oxygen to form water.
112908. Hydrogen burns in air to form water vapor and release heat.
112909. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
112910. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112911. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
112912. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
112913. Calcium reacts with oxygen in air to form calcium oxide.
112914. Sulfur reacts with oxygen to form sulfur dioxide.
112915. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
112916. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
112917. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
112918. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
112919. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
112920. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
112921. Nitrogen combines with hydrogen to form ammonia.
112922. Methane burns in air to form carbon dioxide and water vapor and release heat.
112923. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
112924. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112925. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
112926. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
112927. Aluminium reacts with oxygen in air to form aluminium oxide.
112928. Phosphorus reacts with oxygen to form phosphorus pentoxide.
112929. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
112930. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
112931. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
112932. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
112933. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
112934. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
112935. Sulfur combines with oxygen to form sulfur dioxide.
112936. Ethane burns in air to form carbon dioxide and water vapor and release heat.
112937. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
112938. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112939. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
112940. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
112941. Zinc reacts with oxygen in air to form zinc oxide.
112942. Hydrogen reacts with oxygen to form water.
112943. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
112944. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
112945. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
112946. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
112947. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
112948. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
112949. Carbon combines with oxygen to form carbon dioxide.
112950. Propane burns in air to form carbon dioxide and water vapor and release heat.
112951. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
112952. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112953. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
112954. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
112955. Iron reacts with oxygen in air to form iron(III) oxide.
112956. Nitrogen reacts with oxygen to form nitrogen oxides.
112957. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
112958. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
112959. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
112960. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
112961. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
112962. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
112963. Phosphorus combines with oxygen to form phosphorus pentoxide.
112964. Butane burns in air to form carbon dioxide and water vapor and release heat.
112965. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.

112966. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112967. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
112968. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
112969. Copper reacts with oxygen in air to form copper(II) oxide.
112970. Silicon reacts with oxygen to form silicon dioxide.
112971. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
112972. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
112973. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
112974. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
112975. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
112976. On heating, hydrogen peroxide decomposes to form water and oxygen.
112977. Magnesium combines with oxygen to form magnesium oxide.
112978. Carbon Monoxide burns in air to form carbon dioxide and release heat.
112979. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
112980. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112981. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
112982. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
112983. Lead reacts with oxygen in air to form lead(II) oxide.
112984. Carbon reacts with oxygen to form carbon dioxide.
112985. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
112986. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
112987. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
112988. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
112989. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
112990. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
112991. Iron combines with sulfur to form iron sulfide.
112992. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
112993. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
112994. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
112995. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
112996. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
112997. Magnesium reacts with oxygen in air to form magnesium oxide.
112998. Sulfur reacts with oxygen to form sulfur dioxide.
112999. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
113000. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
113001. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
113002. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
113003. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
113004. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
113005. Calcium Oxide combines with water to form calcium hydroxide.
113006. Hydrogen burns in air to form water vapor and release heat.
113007. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
113008. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113009. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
113010. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
113011. Calcium reacts with oxygen in air to form calcium oxide.
113012. Phosphorus reacts with oxygen to form phosphorus pentoxide.
113013. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
113014. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
113015. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
113016. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
113017. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
113018. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
113019. Hydrogen combines with oxygen to form water.
113020. Methane burns in air to form carbon dioxide and water vapor and release heat.
113021. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
113022. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113023. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
113024. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
113025. Aluminium reacts with oxygen in air to form aluminium oxide.
113026. Hydrogen reacts with oxygen to form water.
113027. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
113028. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
113029. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
113030. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
113031. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
113032. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
113033. Nitrogen combines with hydrogen to form ammonia.
113034. Ethane burns in air to form carbon dioxide and water vapor and release heat.
113035. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
113036. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113037. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
113038. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
113039. Zinc reacts with oxygen in air to form zinc oxide.
113040. Nitrogen reacts with oxygen to form nitrogen oxides.
113041. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
113042. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
113043. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
113044. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
113045. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
113046. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
113047. Sulfur combines with oxygen to form sulfur dioxide.
113048. Propane burns in air to form carbon dioxide and water vapor and release heat.
113049. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
113050. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113051. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
113052. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
113053. Iron reacts with oxygen in air to form iron(III) oxide.
113054. Silicon reacts with oxygen to form silicon dioxide.
113055. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
113056. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
113057. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.

113058. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
113059. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
113060. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
113061. Carbon combines with oxygen to form carbon dioxide.
113062. Butane burns in air to form carbon dioxide and water vapor and release heat.
113063. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
113064. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113065. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
113066. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
113067. Copper reacts with oxygen in air to form copper(II) oxide.
113068. Carbon reacts with oxygen to form carbon dioxide.
113069. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
113070. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
113071. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
113072. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
113073. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
113074. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
113075. Phosphorus combines with oxygen to form phosphorus pentoxide.
113076. Carbon Monoxide burns in air to form carbon dioxide and release heat.
113077. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
113078. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113079. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
113080. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
113081. Lead reacts with oxygen in air to form lead(II) oxide.
113082. Sulfur reacts with oxygen to form sulfur dioxide.
113083. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
113084. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
113085. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
113086. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
113087. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
113088. On heating, hydrogen peroxide decomposes to form water and oxygen.
113089. Magnesium combines with oxygen to form magnesium oxide.
113090. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
113091. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
113092. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113093. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
113094. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
113095. Magnesium reacts with oxygen in air to form magnesium oxide.
113096. Phosphorus reacts with oxygen to form phosphorus pentoxide.
113097. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
113098. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
113099. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
113100. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
113101. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
113102. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
113103. Iron combines with sulfur to form iron sulfide.
113104. Hydrogen burns in air to form water vapor and release heat.
113105. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
113106. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113107. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
113108. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
113109. Calcium reacts with oxygen in air to form calcium oxide.
113110. Hydrogen reacts with oxygen to form water.
113111. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
113112. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
113113. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
113114. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
113115. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
113116. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
113117. Calcium Oxide combines with water to form calcium hydroxide.
113118. Methane burns in air to form carbon dioxide and water vapor and release heat.
113119. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
113120. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113121. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
113122. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
113123. Aluminium reacts with oxygen in air to form aluminium oxide.
113124. Nitrogen reacts with oxygen to form nitrogen oxides.
113125. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
113126. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
113127. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
113128. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
113129. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
113130. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
113131. Hydrogen combines with oxygen to form water.
113132. Ethane burns in air to form carbon dioxide and water vapor and release heat.
113133. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
113134. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113135. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
113136. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
113137. Zinc reacts with oxygen in air to form zinc oxide.
113138. Silicon reacts with oxygen to form silicon dioxide.
113139. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
113140. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
113141. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
113142. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
113143. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
113144. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
113145. Nitrogen combines with hydrogen to form ammonia.
113146. Propane burns in air to form carbon dioxide and water vapor and release heat.
113147. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
113148. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

113149. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
113150. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
113151. Iron reacts with oxygen in air to form iron(III) oxide.
113152. Carbon reacts with oxygen to form carbon dioxide.
113153. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
113154. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
113155. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
113156. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
113157. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
113158. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
113159. Sulfur combines with oxygen to form sulfur dioxide.
113160. Butane burns in air to form carbon dioxide and water vapor and release heat.
113161. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
113162. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113163. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
113164. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
113165. Copper reacts with oxygen in air to form copper(II) oxide.
113166. Sulfur reacts with oxygen to form sulfur dioxide.
113167. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
113168. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
113169. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
113170. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
113171. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
113172. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
113173. Carbon combines with oxygen to form carbon dioxide.
113174. Carbon Monoxide burns in air to form carbon dioxide and release heat.
113175. Copper(I) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
113176. Copper(I) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113177. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.
113178. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
113179. Lead reacts with oxygen in air to form lead(II) oxide.
113180. Phosphorus reacts with oxygen to form phosphorus pentoxide.
113181. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
113182. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
113183. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
113184. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
113185. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
113186. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
113187. Phosphorus combines with oxygen to form phosphorus pentoxide.
113188. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
113189. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
113190. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113191. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
113192. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
113193. Magnesium reacts with oxygen in air to form magnesium oxide.
113194. Hydrogen reacts with oxygen to form water.
113195. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
113196. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
113197. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
113198. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
113199. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
113200. On heating, hydrogen peroxide decomposes to form water and oxygen.
113201. Magnesium combines with oxygen to form magnesium oxide.
113202. Hydrogen burns in air to form water vapor and release heat.
113203. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
113204. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113205. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
113206. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
113207. Calcium reacts with oxygen in air to form calcium oxide.
113208. Nitrogen reacts with oxygen to form nitrogen oxides.
113209. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
113210. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
113211. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
113212. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
113213. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
113214. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
113215. Iron combines with sulfur to form iron sulfide.
113216. Methane burns in air to form carbon dioxide and water vapor and release heat.
113217. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
113218. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113219. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
113220. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
113221. Aluminium reacts with oxygen in air to form aluminium oxide.
113222. Silicon reacts with oxygen to form silicon dioxide.
113223. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
113224. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
113225. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
113226. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
113227. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
113228. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
113229. Calcium Oxide combines with water to form calcium hydroxide.
113230. Ethane burns in air to form carbon dioxide and water vapor and release heat.
113231. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
113232. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113233. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
113234. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
113235. Zinc reacts with oxygen in air to form zinc oxide.
113236. Carbon reacts with oxygen to form carbon dioxide.
113237. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
113238. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
113239. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
113240. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.

113241. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
113242. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
113243. Hydrogen combines with oxygen to form water.
113244. Propane burns in air to form carbon dioxide and water vapor and release heat.
113245. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
113246. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113247. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
113248. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
113249. Iron reacts with oxygen in air to form iron(III) oxide.
113250. Sulfur reacts with oxygen to form sulfur dioxide.
113251. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
113252. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
113253. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
113254. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
113255. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
113256. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
113257. Nitrogen combines with hydrogen to form ammonia.
113258. Butane burns in air to form carbon dioxide and water vapor and release heat.
113259. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
113260. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113261. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
113262. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
113263. Copper reacts with oxygen in air to form copper(II) oxide.
113264. Phosphorus reacts with oxygen to form phosphorus pentoxide.
113265. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
113266. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
113267. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
113268. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
113269. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
113270. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
113271. Sulfur combines with oxygen to form sulfur dioxide.
113272. Carbon Monoxide burns in air to form carbon dioxide and release heat.
113273. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
113274. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113275. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
113276. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
113277. Lead reacts with oxygen in air to form lead(II) oxide.
113278. Hydrogen reacts with oxygen to form water.
113279. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
113280. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
113281. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
113282. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
113283. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
113284. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
113285. Carbon combines with oxygen to form carbon dioxide.
113286. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
113287. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
113288. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113289. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
113290. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
113291. Magnesium reacts with oxygen in air to form magnesium oxide.
113292. Nitrogen reacts with oxygen to form nitrogen oxides.
113293. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
113294. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
113295. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
113296. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
113297. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
113298. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
113299. Phosphorus combines with oxygen to form phosphorus pentoxide.
113300. Hydrogen burns in air to form water vapor and release heat.
113301. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
113302. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113303. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
113304. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
113305. Calcium reacts with oxygen in air to form calcium oxide.
113306. Silicon reacts with oxygen to form silicon dioxide.
113307. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
113308. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
113309. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
113310. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
113311. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
113312. On heating, hydrogen peroxide decomposes to form water and oxygen.
113313. Magnesium combines with oxygen to form magnesium oxide.
113314. Methane burns in air to form carbon dioxide and water vapor and release heat.
113315. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
113316. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113317. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
113318. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
113319. Aluminium reacts with oxygen in air to form aluminium oxide.
113320. Carbon reacts with oxygen to form carbon dioxide.
113321. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
113322. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
113323. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
113324. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
113325. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
113326. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
113327. Iron combines with sulfur to form iron sulfide.
113328. Ethane burns in air to form carbon dioxide and water vapor and release heat.
113329. Copper(II) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
113330. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.

113331. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
113332. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
113333. Zinc reacts with oxygen in air to form zinc oxide.
113334. Sulfur reacts with oxygen to form sulfur dioxide.
113335. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
113336. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
113337. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
113338. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
113339. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
113340. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
113341. Calcium Oxide combines with water to form calcium hydroxide.
113342. Propane burns in air to form carbon dioxide and water vapor and release heat.
113343. Copper(I) Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
113344. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113345. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
113346. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
113347. Iron reacts with oxygen in air to form iron(III) oxide.
113348. Phosphorus reacts with oxygen to form phosphorus pentoxide.
113349. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
113350. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
113351. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
113352. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
113353. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
113354. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
113355. Hydrogen combines with oxygen to form water.
113356. Butane burns in air to form carbon dioxide and water vapor and release heat.
113357. Zinc Nitrate reacts with magnesium sulfate to form an exchange mixture useful for precipitation screening.
113358. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113359. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
113360. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
113361. Copper reacts with oxygen in air to form copper(II) oxide.
113362. Hydrogen reacts with oxygen to form water.
113363. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
113364. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
113365. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
113366. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
113367. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
113368. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
113369. Nitrogen combines with hydrogen to form ammonia.
113370. Carbon Monoxide burns in air to form carbon dioxide and release heat.
113371. Zinc Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
113372. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113373. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
113374. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
113375. Lead reacts with oxygen in air to form lead(II) oxide.
113376. Nitrogen reacts with oxygen to form nitrogen oxides.
113377. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
113378. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
113379. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
113380. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
113381. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
113382. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
113383. Sulfur combines with oxygen to form sulfur dioxide.
113384. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
113385. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
113386. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113387. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
113388. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
113389. Magnesium reacts with oxygen in air to form magnesium oxide.
113390. Silicon reacts with oxygen to form silicon dioxide.
113391. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
113392. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
113393. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
113394. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
113395. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
113396. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
113397. Carbon combines with oxygen to form carbon dioxide.
113398. Hydrogen burns in air to form water vapor and release heat.
113399. Calcium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
113400. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113401. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
113402. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
113403. Calcium reacts with oxygen in air to form calcium oxide.
113404. Carbon reacts with oxygen to form carbon dioxide.
113405. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
113406. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
113407. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
113408. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
113409. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
113410. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
113411. Phosphorus combines with oxygen to form phosphorus pentoxide.
113412. Methane burns in air to form carbon dioxide and water vapor and release heat.
113413. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
113414. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113415. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
113416. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
113417. Aluminium reacts with oxygen in air to form aluminium oxide.
113418. Sulfur reacts with oxygen to form sulfur dioxide.
113419. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
113420. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
113421. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.

113422. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
113423. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
113424. On heating, hydrogen peroxide decomposes to form water and oxygen.
113425. Magnesium combines with oxygen to form magnesium oxide.
113426. Ethane burns in air to form carbon dioxide and water vapor and release heat.
113427. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
113428. Copper(I) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113429. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
113430. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
113431. Zinc reacts with oxygen in air to form zinc oxide.
113432. Phosphorus reacts with oxygen to form phosphorus pentoxide.
113433. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
113434. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
113435. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
113436. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
113437. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
113438. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
113439. Iron combines with sulfur to form iron sulfide.
113440. Propane burns in air to form carbon dioxide and water vapor and release heat.
113441. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
113442. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113443. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
113444. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
113445. Iron reacts with oxygen in air to form iron(III) oxide.
113446. Hydrogen reacts with oxygen to form water.
113447. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
113448. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
113449. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
113450. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
113451. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
113452. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
113453. Calcium Oxide combines with water to form calcium hydroxide.
113454. Butane burns in air to form carbon dioxide and water vapor and release heat.
113455. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
113456. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113457. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
113458. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
113459. Copper reacts with oxygen in air to form copper(II) oxide.
113460. Nitrogen reacts with oxygen to form nitrogen oxides.
113461. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
113462. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
113463. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
113464. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
113465. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
113466. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
113467. Hydrogen combines with oxygen to form water.
113468. Carbon Monoxide burns in air to form carbon dioxide and release heat.
113469. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
113470. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113471. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
113472. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
113473. Lead reacts with oxygen in air to form lead(II) oxide.
113474. Silicon reacts with oxygen to form silicon dioxide.
113475. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
113476. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
113477. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
113478. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
113479. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
113480. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
113481. Nitrogen combines with hydrogen to form ammonia.
113482. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
113483. Barium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
113484. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113485. Potassium reacts with hydrochloric acid to form potassium chloride and hydrogen gas.
113486. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
113487. Magnesium reacts with oxygen in air to form magnesium oxide.
113488. Carbon reacts with oxygen to form carbon dioxide.
113489. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
113490. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
113491. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
113492. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
113493. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
113494. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
113495. Sulfur combines with oxygen to form sulfur dioxide.
113496. Hydrogen burns in air to form water vapor and release heat.
113497. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
113498. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113499. Magnesium reacts with sulfuric acid to form magnesium sulfate and hydrogen gas.
113500. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
113501. Calcium reacts with oxygen in air to form calcium oxide.
113502. Sulfur reacts with oxygen to form sulfur dioxide.
113503. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
113504. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
113505. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
113506. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
113507. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
113508. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
113509. Carbon combines with oxygen to form carbon dioxide.
113510. Methane burns in air to form carbon dioxide and water vapor and release heat.
113511. Copper(II) Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
113512. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113513. Calcium reacts with nitric acid to form calcium nitrate and hydrogen gas.

113514. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
113515. Aluminium reacts with oxygen in air to form aluminium oxide.
113516. Phosphorus reacts with oxygen to form phosphorus pentoxide.
113517. Nitric Acid neutralizes barium hydroxide to form barium nitrate and water.
113518. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
113519. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
113520. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
113521. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
113522. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
113523. Phosphorus combines with oxygen to form phosphorus pentoxide.
113524. Ethane burns in air to form carbon dioxide and water vapor and release heat.
113525. Zinc Nitrate reacts with copper(II) sulfate to form an exchange mixture useful for precipitation screening.
113526. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113527. Aluminium reacts with hydrochloric acid to form aluminium chloride and hydrogen gas.
113528. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
113529. Zinc reacts with oxygen in air to form zinc oxide.
113530. Hydrogen reacts with oxygen to form water.
113531. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
113532. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
113533. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
113534. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
113535. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
113536. On heating, hydrogen peroxide decomposes to form water and oxygen.
113537. Magnesium combines with oxygen to form magnesium oxide.
113538. Propane burns in air to form carbon dioxide and water vapor and release heat.
113539. Zinc Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
113540. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113541. Zinc reacts with sulfuric acid to form zinc sulfate and hydrogen gas.
113542. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
113543. Iron reacts with oxygen in air to form iron(III) oxide.
113544. Nitrogen reacts with oxygen to form nitrogen oxides.
113545. Sulfuric Acid neutralizes sodium hydroxide to form sodium sulfate and water.
113546. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
113547. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
113548. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
113549. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
113550. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
113551. Iron combines with sulfur to form iron sulfide.
113552. Butane burns in air to form carbon dioxide and water vapor and release heat.
113553. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
113554. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113555. Iron reacts with nitric acid to form iron(II) nitrate and hydrogen gas.
113556. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
113557. Copper reacts with oxygen in air to form copper(II) oxide.
113558. Silicon reacts with oxygen to form silicon dioxide.
113559. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
113560. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
113561. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
113562. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
113563. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
113564. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
113565. Calcium Oxide combines with water to form calcium hydroxide.
113566. Carbon Monoxide burns in air to form carbon dioxide and release heat.
113567. Calcium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
113568. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113569. Lithium reacts with hydrochloric acid to form lithium chloride and hydrogen gas.
113570. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
113571. Lead reacts with oxygen in air to form lead(II) oxide.
113572. Carbon reacts with oxygen to form carbon dioxide.
113573. Hydrochloric Acid neutralizes potassium hydroxide to form potassium chloride and water.
113574. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
113575. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
113576. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
113577. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
113578. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
113579. Hydrogen combines with oxygen to form water.
113580. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
113581. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
113582. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113583. Sodium reacts with sulfuric acid to form sodium sulfate and hydrogen gas.
113584. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
113585. Magnesium reacts with oxygen in air to form magnesium oxide.
113586. Sulfur reacts with oxygen to form sulfur dioxide.
113587. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
113588. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
113589. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
113590. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
113591. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
113592. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
113593. Nitrogen combines with hydrogen to form ammonia.
113594. Hydrogen burns in air to form water vapor and release heat.
113595. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
113596. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113597. Potassium reacts with nitric acid to form potassium nitrate and hydrogen gas.
113598. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
113599. Calcium reacts with oxygen in air to form calcium oxide.
113600. Phosphorus reacts with oxygen to form phosphorus pentoxide.
113601. Nitric Acid neutralizes calcium hydroxide to form calcium nitrate and water.
113602. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
113603. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
113604. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
113605. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.

113606. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
113607. Sulfur combines with oxygen to form sulfur dioxide.
113608. Methane burns in air to form carbon dioxide and water vapor and release heat.
113609. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
113610. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113611. Magnesium reacts with hydrochloric acid to form magnesium chloride and hydrogen gas.
113612. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
113613. Aluminium reacts with oxygen in air to form aluminium oxide.
113614. Hydrogen reacts with oxygen to form water.
113615. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
113616. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
113617. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
113618. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
113619. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
113620. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
113621. Carbon combines with oxygen to form carbon dioxide.
113622. Ethane burns in air to form carbon dioxide and water vapor and release heat.
113623. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
113624. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113625. Calcium reacts with sulfuric acid to form calcium sulfate and hydrogen gas.
113626. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
113627. Zinc reacts with oxygen in air to form zinc oxide.
113628. Nitrogen reacts with oxygen to form nitrogen oxides.
113629. Sulfuric Acid neutralizes ammonium hydroxide to form ammonium sulfate and water.
113630. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
113631. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
113632. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
113633. Copper(I) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
113634. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
113635. Phosphorus combines with oxygen to form phosphorus pentoxide.
113636. Propane burns in air to form carbon dioxide and water vapor and release heat.
113637. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
113638. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113639. Aluminium reacts with nitric acid to form aluminium nitrate and hydrogen gas.
113640. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
113641. Iron reacts with oxygen in air to form iron(III) oxide.
113642. Silicon reacts with oxygen to form silicon dioxide.
113643. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
113644. Nitric Acid reacts with calcium carbonate to form calcium nitrate, water, and carbon dioxide.
113645. Nitric Acid reacts with copper(II) oxide to form copper(II) nitrate and water.
113646. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
113647. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
113648. On heating, hydrogen peroxide decomposes to form water and oxygen.
113649. Magnesium combines with oxygen to form magnesium oxide.
113650. Butane burns in air to form carbon dioxide and water vapor and release heat.
113651. Barium Nitrate reacts with iron(II) sulfate to form an exchange mixture useful for precipitation screening.
113652. Sodium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113653. Zinc reacts with hydrochloric acid to form zinc chloride and hydrogen gas.
113654. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
113655. Copper reacts with oxygen in air to form copper(II) oxide.
113656. Carbon reacts with oxygen to form carbon dioxide.
113657. Hydrochloric Acid neutralizes barium hydroxide to form barium chloride and water.
113658. Hydrochloric Acid reacts with magnesium carbonate to form magnesium chloride, water, and carbon dioxide.
113659. Hydrochloric Acid reacts with zinc oxide to form zinc chloride and water.
113660. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
113661. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
113662. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
113663. Iron combines with sulfur to form iron sulfide.
113664. Carbon Monoxide burns in air to form carbon dioxide and release heat.
113665. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
113666. Potassium Sulfate reacts with magnesium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113667. Iron reacts with sulfuric acid to form iron(II) sulfate and hydrogen gas.
113668. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
113669. Lead reacts with oxygen in air to form lead(II) oxide.
113670. Sulfur reacts with oxygen to form sulfur dioxide.
113671. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
113672. Sulfuric Acid reacts with magnesium carbonate to form magnesium sulfate, water, and carbon dioxide.
113673. Sulfuric Acid reacts with zinc oxide to form zinc sulfate and water.
113674. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
113675. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.
113676. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
113677. Calcium Oxide combines with water to form calcium hydroxide.
113678. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
113679. Copper(II) Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
113680. Copper(II) Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113681. Lithium reacts with nitric acid to form lithium nitrate and hydrogen gas.
113682. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
113683. Magnesium reacts with oxygen in air to form magnesium oxide.
113684. Phosphorus reacts with oxygen to form phosphorus pentoxide.
113685. Nitric Acid neutralizes sodium hydroxide to form sodium nitrate and water.
113686. Nitric Acid reacts with zinc carbonate to form zinc nitrate, water, and carbon dioxide.
113687. Nitric Acid reacts with iron(III) oxide to form iron(III) nitrate and water.
113688. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
113689. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
113690. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
113691. Hydrogen combines with oxygen to form water.
113692. Hydrogen burns in air to form water vapor and release heat.
113693. Zinc Nitrate reacts with sodium sulfate to form an exchange mixture useful for precipitation screening.
113694. Zinc Sulfate reacts with copper(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113695. Sodium reacts with hydrochloric acid to form sodium chloride and hydrogen gas.
113696. Sodium reacts with water to form sodium hydroxide and hydrogen gas.

113697. Calcium reacts with oxygen in air to form calcium oxide.
113698. Hydrogen reacts with oxygen to form water.
113699. Hydrochloric Acid neutralizes sodium hydroxide to form sodium chloride and water.
113700. Hydrochloric Acid reacts with zinc carbonate to form zinc chloride, water, and carbon dioxide.
113701. Hydrochloric Acid reacts with iron(III) oxide to form iron(III) chloride and water.
113702. Iron displaces copper from copper(II) sulfate to form iron(II) sulfate and copper.
113703. Lead(II) Nitrate reacts with potassium iodide to form lead(II) iodide precipitate and potassium nitrate.
113704. On heating, copper carbonate decomposes to form copper(II) oxide and carbon dioxide.
113705. Nitrogen combines with hydrogen to form ammonia.
113706. Methane burns in air to form carbon dioxide and water vapor and release heat.
113707. Zinc Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
113708. Magnesium Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113709. Potassium reacts with sulfuric acid to form potassium sulfate and hydrogen gas.
113710. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
113711. Aluminium reacts with oxygen in air to form aluminium oxide.
113712. Nitrogen reacts with oxygen to form nitrogen oxides.
113713. Sulfuric Acid neutralizes potassium hydroxide to form potassium sulfate and water.
113714. Sulfuric Acid reacts with copper carbonate to form copper(II) sulfate, water, and carbon dioxide.
113715. Sulfuric Acid reacts with lead(II) oxide to form lead(II) sulfate and water.
113716. Magnesium displaces zinc from zinc sulfate to form magnesium sulfate and zinc.
113717. Barium Chloride reacts with sodium sulfate to form barium sulfate precipitate and sodium chloride.
113718. On heating, zinc carbonate decomposes to form zinc oxide and carbon dioxide.
113719. Sulfur combines with oxygen to form sulfur dioxide.
113720. Ethane burns in air to form carbon dioxide and water vapor and release heat.
113721. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
113722. Iron(II) Sulfate reacts with iron(II) hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113723. Magnesium reacts with nitric acid to form magnesium nitrate and hydrogen gas.
113724. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
113725. Zinc reacts with oxygen in air to form zinc oxide.
113726. Silicon reacts with oxygen to form silicon dioxide.
113727. Nitric Acid neutralizes potassium hydroxide to form potassium nitrate and water.
113728. Nitric Acid reacts with copper carbonate to form copper(II) nitrate, water, and carbon dioxide.
113729. Nitric Acid reacts with lead(II) oxide to form lead(II) nitrate and water.
113730. Aluminium displaces iron from iron(III) chloride to form aluminium chloride and iron.
113731. Calcium Chloride reacts with sodium carbonate to form calcium carbonate precipitate and sodium chloride.
113732. On heating, lead(II) nitrate decomposes to form lead(II) oxide and nitrogen dioxide and oxygen.
113733. Carbon combines with oxygen to form carbon dioxide.
113734. Propane burns in air to form carbon dioxide and water vapor and release heat.
113735. Calcium Nitrate reacts with potassium sulfate to form an exchange mixture useful for precipitation screening.
113736. Sodium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113737. Calcium reacts with hydrochloric acid to form calcium chloride and hydrogen gas.
113738. Magnesium reacts with water to form magnesium hydroxide and hydrogen gas.
113739. Iron reacts with oxygen in air to form iron(III) oxide.
113740. Carbon reacts with oxygen to form carbon dioxide.
113741. Hydrochloric Acid neutralizes calcium hydroxide to form calcium chloride and water.
113742. Hydrochloric Acid reacts with sodium carbonate to form sodium chloride, water, and carbon dioxide.
113743. Hydrochloric Acid reacts with magnesium oxide to form magnesium chloride and water.
113744. Copper displaces silver from silver nitrate to form copper(II) nitrate and silver.
113745. Copper(II) Sulfate reacts with sodium hydroxide to form copper(II) hydroxide precipitate and sodium sulfate.
113746. On heating, potassium chlorate decomposes to form potassium chloride and oxygen.
113747. Phosphorus combines with oxygen to form phosphorus pentoxide.
113748. Butane burns in air to form carbon dioxide and water vapor and release heat.
113749. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
113750. Potassium Sulfate reacts with sodium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113751. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen gas.
113752. Lithium reacts with water to form lithium hydroxide and hydrogen gas.
113753. Copper reacts with oxygen in air to form copper(II) oxide.
113754. Sulfur reacts with oxygen to form sulfur dioxide.
113755. Sulfuric Acid neutralizes calcium hydroxide to form calcium sulfate and water.
113756. Sulfuric Acid reacts with sodium carbonate to form sodium sulfate, water, and carbon dioxide.
113757. Sulfuric Acid reacts with magnesium oxide to form magnesium sulfate and water.
113758. Zinc displaces lead from lead(II) nitrate to form zinc nitrate and lead.
113759. Iron(III) Chloride reacts with ammonium hydroxide to form iron(III) hydroxide precipitate and ammonium chloride.
113760. On heating, hydrogen peroxide decomposes to form water and oxygen.
113761. Magnesium combines with oxygen to form magnesium oxide.
113762. Carbon Monoxide burns in air to form carbon dioxide and release heat.
113763. Silver Nitrate reacts with potassium chloride to form silver chloride precipitate and potassium nitrate.
113764. Copper(II) Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113765. Zinc reacts with nitric acid to form zinc nitrate and hydrogen gas.
113766. Sodium reacts with water to form sodium hydroxide and hydrogen gas.
113767. Lead reacts with oxygen in air to form lead(II) oxide.
113768. Phosphorus reacts with oxygen to form phosphorus pentoxide.
113769. Nitric Acid neutralizes ammonium hydroxide to form ammonium nitrate and water.
113770. Nitric Acid reacts with potassium carbonate to form potassium nitrate, water, and carbon dioxide.
113771. Nitric Acid reacts with calcium oxide to form calcium nitrate and water.
113772. Iron displaces silver from silver nitrate to form iron(II) nitrate and silver.
113773. Zinc Sulfate reacts with sodium carbonate to form zinc carbonate precipitate and sodium sulfate.
113774. On heating, ammonium carbonate decomposes to form ammonia and carbon dioxide and water vapor.
113775. Iron combines with sulfur to form iron sulfide.
113776. Ethanol Vapor burns in air to form carbon dioxide and water vapor and release heat.
113777. Lead(II) Nitrate reacts with barium chloride to form lead(II) chloride precipitate and barium nitrate.
113778. Zinc Sulfate reacts with potassium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113779. Iron reacts with hydrochloric acid to form iron(II) chloride and hydrogen gas.
113780. Potassium reacts with water to form potassium hydroxide and hydrogen gas.
113781. Magnesium reacts with oxygen in air to form magnesium oxide.
113782. Hydrogen reacts with oxygen to form water.
113783. Hydrochloric Acid neutralizes ammonium hydroxide to form ammonium chloride and water.
113784. Hydrochloric Acid reacts with potassium carbonate to form potassium chloride, water, and carbon dioxide.
113785. Hydrochloric Acid reacts with calcium oxide to form calcium chloride and water.
113786. Magnesium displaces copper from copper(II) nitrate to form magnesium nitrate and copper.
113787. Lead(II) Nitrate reacts with sodium sulfate to form lead(II) sulfate precipitate and sodium nitrate.

113788. On heating, calcium hydroxide decomposes to form calcium oxide and water vapor.
113789. Calcium Oxide combines with water to form calcium hydroxide.
113790. Hydrogen burns in air to form water vapor and release heat.
113791. Lead(II) Nitrate reacts with calcium chloride to form lead(II) chloride precipitate and calcium nitrate.
113792. Magnesium Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113793. Lithium reacts with sulfuric acid to form lithium sulfate and hydrogen gas.
113794. Calcium reacts with water to form calcium hydroxide and hydrogen gas.
113795. Calcium reacts with oxygen in air to form calcium oxide.
113796. Nitrogen reacts with oxygen to form nitrogen oxides.
113797. Sulfuric Acid neutralizes barium hydroxide to form barium sulfate and water.
113798. Sulfuric Acid reacts with calcium carbonate to form calcium sulfate, water, and carbon dioxide.
113799. Sulfuric Acid reacts with copper(II) oxide to form copper(II) sulfate and water.
113800. Zinc displaces copper from copper(II) sulfate to form zinc sulfate and copper.
113801. Silver Nitrate reacts with sodium chloride to form silver chloride precipitate and sodium nitrate.
113802. On heating, calcium carbonate decomposes to form calcium oxide and carbon dioxide.
113803. Hydrogen combines with oxygen to form water.
113804. Methane burns in air to form carbon dioxide and water vapor and release heat.
113805. Barium Nitrate reacts with zinc sulfate to form an exchange mixture useful for precipitation screening.
113806. Iron(II) Sulfate reacts with calcium hydroxide to form a hydroxide precipitate and a soluble sulfate by-product.
113807. Sodium reacts with nitric acid to form sodium nitrate and hydrogen gas.
